FOREWORD.....	5
List of figures .....	6
List of tables .....	12
ABSTRACT .....	13
CHAPTER 1 POPULATION OF MONGOLIA .....	14
1.1 Population .....	15
1.2. Population age-sex composition .....	16
1.3 Fertility .....	19
1.4 Average life expectancy .....	20
CHAPTER II. INDICATORS FOR SUSTAINABLE DEVELOPMENT OBJECTIVES .....	23
sdg 3.1.1 Maternal mortality ratio /per 100 000 live births/ .....	25
sdg 3.1.2 Proportion of births attended by skilled health personnel.....	26
sdg 3.7.2 Adolescent birth rate .....	27
sdg 3.2.1 Under five mortality rate.....	29
sdg 3.2.2.a Neonatal mortality rate.....	30
sdg 3.3.1 Number of new hiv infections per 1 000 uninfected population.....	31
sdg 3.3.2 Tuberculosis incidence per 100 000 population.....	32
sdg 3.3.4 Hepatitis b incidence per 100 000 population .....	33
sdg 3.4.1 Mortality rate attributed to cardiovascular disease, cancer, diabetes or chronic respiratory disease /per 10 000 population 30-70 aged/.....	34
sdg 3.6.1 Death rate due to road traffic injuries /per 10 000 population/.....	36
sdg 3.c.1 Health worker density and distribution.....	37
CHAPTER III. MATERNAL AND CHILD HEALTH.....	39
3.1. Pregnancy control and antenatal care services.....	39
3.2 Labour and delivery health care services .....	41
3.4 Maternal mortality .....	48
3.5 Live births.....	49
3.6. Stillbirths.....	52
3.7 Abortion .....	53
3.9 Child and adolescent health.....	56
3.10 Indicators of child health care.....	56
3.11 Inpatient care .....	57
3.14 Immunization.....	58

CHAPTER 4. MEDICAL CARE SERVICE .....	58
4.1. Family health care .....	62
4.2 Soum health centers medical care services .....	65
4.3. General hospitals and public health centers medical care services .....	68
4.4 Regional diagnostic and treatment centres medical care services .....	72
4.5. Central hospitals and specialized centres medical care services .....	74
4.6. Private hospitals health care services .....	77
CHAPTER 5. HUMAN RESOURCES IN THE HEALTH SECTOR .....	81
CHAPTER 6 .....	94
COMMUNICABLE DISEASES .....	94
6.1 RESPIRATORY INFECTIONS .....	95
6.2 Varicella .....	96
6.3 Meningococcal infections .....	97
6.4 Mumps .....	97
6.5 Tuberculosis .....	98
6.6 Tuberculosis incidence among children .....	100
6.7 Disability due to tb .....	100
6.7 The treatment success rate .....	100
6.10 Intestinal infectious diseases .....	101
6.11 Shigellosis .....	102
6.12 OTHER BACTERIAL FOODBORNE INTOXICATIONS .....	103
6.13 VIRAL HEPATITIS .....	105
6.14 Viral hepatitis A .....	106
6.15 Viral hepatitis B .....	107
6.16 Viral hepatitis C .....	108
6.17 Other viral hepatitis .....	109
6.18 Sexually transmitted infections .....	109
6.19 Syphilis .....	113
6.20 HIV infection .....	115
6.21 Zoonotic infections .....	115
CHAPTER 7. NONCOMMUNICABLE DISEASES .....	116
7.1 The leading causes of the population morbidity .....	117
7.2 Diseases of the respiratory system .....	117

7.3 Diseases of the digestive system.....	120
7.4 Diseases of the oral cavity, salivary glands and jaws .....	122
7.5 Dental caries.....	123
7.6 Diseases of the oesophagus, stomach and duodenum.....	123
7.7 Chronic hepatitis .....	124
7.8 Fibrosis and cirrhosis of liver .....	124
7.9 Diseases of the circulatory system .....	125
7.10 Arterial hypertension .....	127
7.11 Ischaemic heart diseases.....	128
7.12 Cerebrovascular diseases .....	128
7.13 Diseases of the genitourinary system .....	129
7.14 Renal tubulo-interstitial diseases .....	131
7.15 Inflammatory diseases of female pelvic organs.....	132
7.16 Diseases of the nervous system .....	133
8.1 Mortality caused by diseases of the circulatory system.....	139
8.2. Cancer mortality.....	143
8.3 Mortality due to injuries, poisoning and certain other consequences of external causes ...	144
8.4 Population mortality due to transport accident.....	146
8.5 Suicide mortality rate.....	148
8.6 Mortality due to other external causes of accidental injury .....	149
8.7 Mortality due to diseases of the digestive system .....	150
8.8 Mortality of Diseases of the respiratory system .....	152
CHAPTER 9 INDICATORS OF OF PHARMACEUTICAL SECTOR.....	154
9.1 Drug Registration.....	154
9.2. Drug side effects and safety .....	159
9.3 Medical equipment and automation.....	159
CHAPTER 10. HEALTH ECONOMICS .....	161
10.1. Budget performance of the Health Sector .....	161
10.2. Income and Expenditure of Health Insurance Fund .....	168

## FOREWORD

The health sector is characterful from other sectors in that an independent statistical compendium analyzes official statistics and delivers them to users as a compilation.

The Center for Health Development compiles health statistical reports on the human resources, capacity, and operations of public and private health organizations in Mongolia. It annually provides official data to decision-makers, policymakers, researchers, scientists, professors, physicians, professionals, and information users.

Health sector policy research, analysis, socio-economic estimates, and budgeting are conducted based on health information published by the Centre for Health Development. This information is beneficial for evaluating the implementation of long-term and short-term programs, internal monitoring and evaluation, planning and improving health care services, and policy development.

This annual report presents Sustainable Development Goals, Universal Health Coverage Indicators, Reproductive Health, Maternal and Child Health, and Adolescent Health Indicators for the last ten years and detailed estimates of mortality and morbidity.

The maternal mortality ratio reduced to 23.0 in 2019, reaching the National Program's criteria on Maternal, Child and Reproductive Health (2017-2021). Mongolia aims to reduce the under-five mortality rate to 15 per 1,000 live births by 2020, and the infant mortality rate to 13 per 1,000 live births. We are pleased to announce that we have achieved our goal to reduce the infant mortality rate.

We would like to express our appreciation to the WHO Representative's Office in Mongolia for providing financial support for publishing this report to all of you available in making evidence-based decisions by health policy developers and decision-makers at all levels of the health sector.

We look forward to cooperating with you to send your valuable comments and suggestions on the monthly, quarterly, annual reports and health statistics, provided by the Center. And we firmly believe that this annual report can provide timely information for health policy and decision-makers, and other users for making evidence-based decisions.

DIRECTOR

B.NARANTUYA

## LIST OF FIGURES

Figure 1. 2 Number of population, annual growth rate, 2009-2019.....	15

## ABSTRACT

“Health Indicators 2019” is composed of 15 chapters, 102 subgroups, and health indicators were compared with the last 10 years.

As of the end of 2019, the total population of Mongolia was 3 296.9 thousand, an increase of 58.4 thousand or by 1.8 percent compared to the previous year. Out of the total population, 68.5% live in cities and the remaining 31.5% reside in rural areas. 1 539.8 thousand people or 46.7 percent of the population resides in Ulaanbaatar.

49.3 percent of the resident population is male and 50.7 per cent is female. The sex ratio—the number of males per 100 females - is 97. Population distribution by age group, 32.1 percent of the population are children under 15 years, and 63.6 percent of the population aged 15-64 years and 4.2 percent of the population is over the age of 65, respectively.

In 2019, the average life expectancy at birth was 70.4 years, for females 75.96 years and males 66.38 years.

In 2019, 77 601 mothers gave birth in the country, which compared to 2018, the number of births has increased by 543 or 0.6%. In 2019, 78 223 live births were recorded, out of them, there were 1 969 twins and 41 triplets.

The maternal mortality ratio reduced to 23.0 in 2019, reaching the National Program's criteria on Maternal, Child and Reproductive Health (2017-2021). Mongolia aims to reduce the under-five mortality rate to 15 per 1,000 live births by 2020, and the infant mortality rate to 13 per 1,000 live births. We are pleased to announce that we have achieved our goal to reduce the infant mortality rate.

In 2019, a total of 4 459 health facilities were operating and delivering health care services around the country, including 12 specialized hospitals, 5 RDTCs, 16 aimag general hospitals, 13 district general hospitals and public health centres (PHCs), 6 rural general hospitals, 209 family health centres, 321 sound health centres, 237 private hospitals and 1 444 private clinics.

As of 2019, a total of 54.0 thousand healthcare employees provide medical care services to a total of 3,200.0 thousand pop, in Mongolia. The total number of employees increased by 23.1 thousand or 37 per 10 000 pop, compared to 2020 and increased by 4.6 percent compared to the previous year. Out of total health personnel, 92.5% employed by the health sector and 7.7% of them represent health workers employed by other sectors.

An average last decade, a total of 45,902 cases with 31 different types of communicable diseases were reported nationwide, which is an average last decade is 157.2 per 10,000 population.

In Mongolia, the average last decade of population mortality reported 16.7 thousand or the general mortality rate is 5.7 per 1000. The mortality rate reached 17.2 thousand in 2019, an increase of 513 people (3.1%) from the average of the last ten years, and a decrease of 126 people (0.7%) from the previous year.

## CHAPTER 1 POPULATION OF MONGOLIA

This section provides an overview of the demographics of the population of Mongolia. This includes indicators of vital statistics on the growth, age and sex distribution, births and deaths, and life expectancy of the population.

The main sources of population statistics are the Population and Housing Census conducted by the National Statistical Office every 10 years, and annual vital and migration statistics of the population.

The population of Mongolia includes the resident population in Mongolia and Mongolian citizens who reside abroad for 6 months and above.

A household is a group of people who live together in one residence, with a joint budget and who jointly provide their food and other basic needs. Household members are typically family members or relatives; however, a household can include members with no family relation. The urban population includes the population resides in Ulaanbaatar city, province centers, and towns.

The rural population includes population resides in soum centers and rural areas. The sex ratio at birth refers to the number of boys born alive per 100 girls born alive.

The crude birth rate is the number of live births occurring among the population of a given geographical area in a given year, per 1 000 mid-year population of the given geographical area during the same year.

The age-specific fertility rate is the number of live births to women in a specific age group, divided by the total population of women in the same age group and expressed as a promille.

The total fertility rate refers to the average number of children that would be born to a woman over her lifetime.

The crude death rate is the number of deaths occurring among the population of a given geographical area during a given year, per 1 000 mid-year population of the given geographical area during the same year age and expressed as a promille.

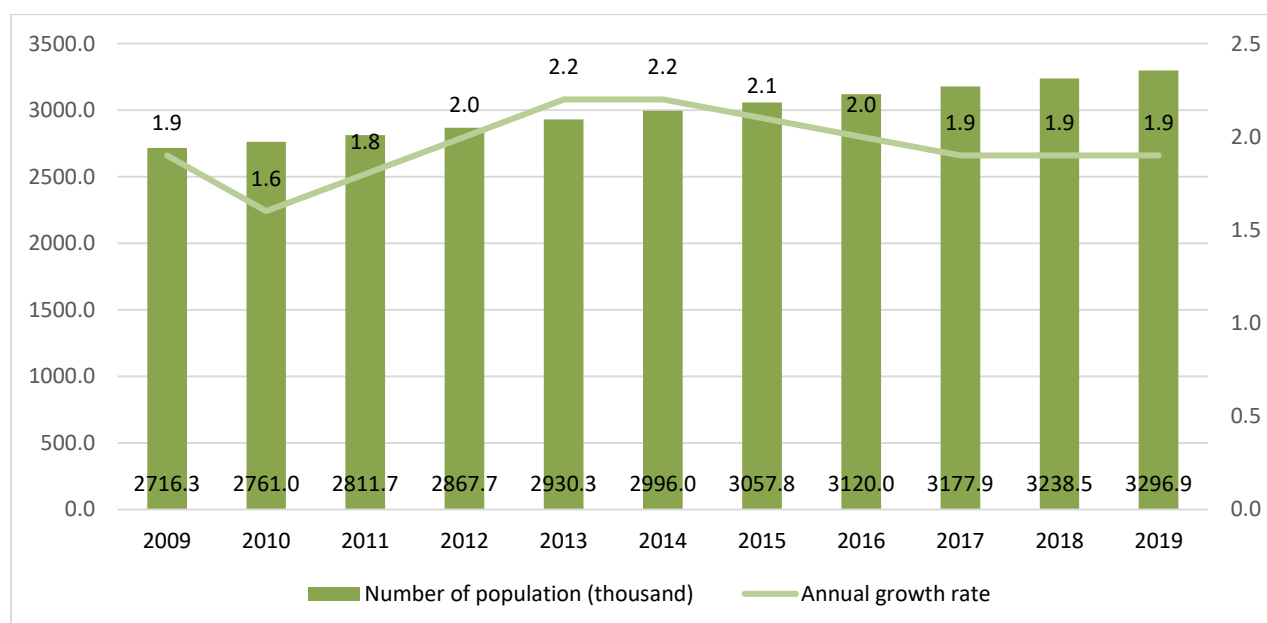

## 1.1 Population

As of the end of 2019, Mongolia's total population was 3 296.9 thousand, an increase of 58.4 thousand or by 1.8 per cent compared to the previous year. Out of the total population, 68.5% live in cities, and the remaining 31.5% reside in rural areas. 1 539.8 thousand people or 46.7 per cent of the population resides in Ulaanbaatar.

49.3 per cent of the resident population is male, and 50.7 per cent is female. The sex ratio—the number of males per 100 females - is 97. Population distribution by age group, 32.1 per cent of the population are children under 15 years, and 63.6 per cent of the population aged 15-64 years and 4.2 per cent of the population is over 65.

As of 2019, the total number of households was 897.4 thousand, and 67.6 per cent of households in urban areas and 32.4 per cent of households in rural areas. The average household size is 3.6 persons. Out of the total households, 411.4 thousand live in Ulaanbaatar city; 170.6 thousand live in the Khangai region, 145.2 thousand in the Central region, 105.2 thousand in the Western region, and 65.0 thousand live in the Eastern region.

*Figure 1. 1 Number of population, annual growth rate, 2009-2019*

Source: [www.1212.mn](http://www.1212.mn)

The annual average growth rate of the population of Mongolia was 2.0 per cent in the last decade. In 2019, the population reached 3.2 million, an increase of 535.9 thousand compared to 2010 and 58.4 thousand compared to the previous year, while the growth rate was the same level or 1.9.

## 1.2. Population age-sex composition

Population age-sex composition is one of the critical indicators in demography. This composition differs in each country, and it has a significant impact on current and future social-economic issues.

Studying the age and sex composition of the population is of much significance. It provides the possibility to analyze the country's historical demographic path, evaluate and conclude the current process, and determine further trends.

Doing so forms the basis of long-term and short-term socio-economic policies of the country, taking into account the changing trends in the age and sex structure of the population. The age structure of the country's population changes depending on the birth and mortality rate of the population. The percentage of youth, adults, and elderly within the population affects every social and economic development trends.

*Figure 1. 2 Population pyramid, 2019*

Source: [www.1212.mn](http://www.1212.mn)

As per the above population pyramid, it gradually widens in the middle, which indicates an increase in the youngster population. It narrows in the population age group of 15-19 years, explained by a decline in the fertility rate since 1990. Out of the total population accounted for 63.8 per cent were under 35 years old. The working-age population of 25-34 years old is relatively high in the above population pyramid.

“Demographic window of opportunity” refers to the period when the percentage of the working-age population is high. At this time, the demographic factor has a positive effect on the socio-economic development of the country.

With the opening of the demographic window of opportunity, a possibility is created to implement long-term policy programs in increasing education level of children, and youth and training qualified human resource and have sufficient reserves of the labour force in workplace increase.

Figure 1. 3 Population age structure, by selected years

Source: [www.1212.mn](http://www.1212.mn)

In terms of the population in 2019 by age groups, 1 026.5 thousand (32.1 per cent) are children under 15, 2 034.7 thousand (63.6 per cent) are population aged 15-64 years, 135.8 thousand (4.2 per cent) are elderly aged 65 and above.

Figure 1. 4 Population dependency ratio, by selected years

Population dependency is the ratio of population aged under 15 and above 65 per 100 working-age population, and it expresses the burden of non-working age population to society.

In 2019, the Dependency ratio was 55 children and elderly per 100 working-age population, aged 15-64 years.

Population sex ratio is above the 100 males per 100 females, following aimags: Uvs, Arkhangai, Bulgan, Govisumber, Dornogovi, Dundgovi, Umnugovi, Selenge, Tuv, Sukhbaatar and Khentii.

Table 1. 1 Number of population and population indicators by aimag, Ulaanbaatar, 2019

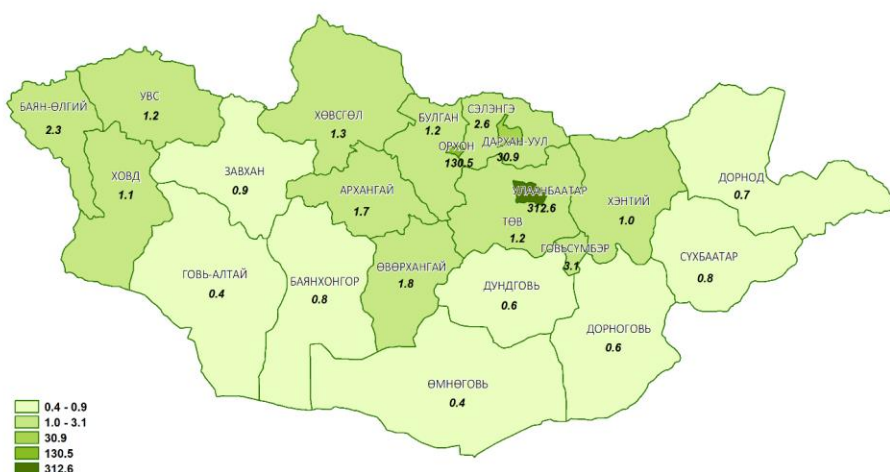

Aimag, city	Population	Dependency ratio	Of which:		Ageing index	Sex ratio
			Children	Elderly		
Total	3238 479	54.6	48.3	6.3	13.0	96.7
Western region	408 979	57.0	51.3	5.7	11.0	100.2
Bayan-Ulgii	105 090	61.2	56.0	5.2	9.3	100.0

Zavhan	72 779	53.2	46.4	6.8	14.7	99.9
Uvs	84 309	58.0	52.7	5.3	10.1	101.4
Khovd	88 330	58.2	52.5	5.7	10.8	100.0
Khangai region	604 353	53.3	46.9	6.4	13.5	98.9
Arkhangai	96 720	53.2	46.7	6.5	14.0	100.1
Bayankhongor	88 356	55.0	49.1	5.9	12.0	97.2
Bulgan	62 214	50.7	43.4	7.3	16.9	103.6
Orkhon	105 987	51.3	45.4	5.9	13.1	96.2
Uvurkhangai	117 112	54.7	47.8	6.9	14.3	99.2
Khuvsgul	133 964	53.7	47.8	5.9	12.4	98.8
Central region	513 438	53.4	46.8	6.6	14.0	101.2
Govisumber	17 796	59.4	53.8	5.6	10.5	99.9
Darkhan-Uul	105 923	53.3	46.4	6.9	14.8	96.8
Dornogovi	69 304	53.8	48.5	5.3	11.0	100.3
Dundgovi	46 628	53.7	45.7	8.0	17.4	101.4
Umnugovi	66 722	53.0	47.4	5.6	11.8	101.0
Selenge	111 403	51.2	45.0	6.2	13.8	102.5
Tuv	95 662	54.7	47.0	7.7	16.3	105.5
Eastern region	220 334	53.9	47.8	6.1	12.8	101.3
Dornod	80 984	55.1	49.0	6.1	12.5	100.2
Sukhbaatar	62 322	52.6	46.9	5.7	12.3	101.6
Khentii	77 028	53.7	47.2	6.5	13.7	102.2
Ulaanbaatar	1491 375	54.9	48.6	6.3	13.0	92.8

In 2019, the population density in Ulan-Bator increased to 312.6, increased by 16/5.2%/ persons compared to the five years ago, and decreased by 5 /1.5%/ persons compared to the previous year, respectively.

Our country is one of the most sparsely populated countries globally in terms of population density, and in 2019, there are 2.0 persons per square kilometre.

Figure 1. 5 Population density, by aimag and Ulan-Bator, 2019

Source: [www.1212.mn](http://www.1212.mn)

### 1.3 Fertility

The highest birth rate within the past ten years, in 2014, Mongolia has welcomed 82.8 thousand children. In 2019, 78.6 thousand children were born nationwide, higher by 12.6 per cent than the number of births in 2010, and reduced by 5.2 per cent from 5 years ago and increased by 4.3 per cent compared to the previous year.

An average of the last ten years, stillbirth, accounted for 0.6 per cent, of all births. In 2019, the stillbirth rate (per 1,000 total births) increased to 5, compared to an average last ten years and from the previous year, reduced by 1, respectively.

Figure 1. 6 Fertility, 2010-2019

On average last decade, the crude birth rate was 26, while this indicator was most high or 29, in 2013 and it was most lowly or 24, in 2017. In 2019, the crude birth rate was 25, decreased by 1, compared to an average last decade and the same level the previous year.

Figure 1. 7 Birth rate, 2010-2019

Source; NSO, [www.1212.mn](http://www.1212.mn)

The general fertility rate per 1000 women of childbearing age (15-49 years) was 91 an average last decade, it was mostly high or 98, in 2015 and lowly or 81, in 2010.

In 2019, the general fertility rate was 94, increased by 3 and 5, compared to an average last decade and the previous year, respectively. In our country, the sex ratio at birth was 105 boys per 100 girls in 2019.

#### 1.4 Average life expectancy

"Life expectancy" is the primary determinant of the life span of a person. In 2019, the life expectancy at birth reached 70.41 years, increased by 0.2 points compared to the previous year. And the life expectancy for women was 75.96 years and for men 66.38 years.

Life expectancy is a predictive measure and is determined by an individual's average life expectancy, estimated based on the mortality rate in the age groups. Life expectancy varies depending on gender, current age, and lifestyle.

Figure 1. 8 Life expectancy, 2009-2019

Source: NSO [www.1212.mn](http://www.1212.mn)

The life expectancy at birth shows by aimag, where were Dundgovi aimag has a relatively higher by 3.7 years, in Khuvsgul aimag lower by 3.5 years, than the national average. In general, there are four aimags below the national average. A difference among aimags in average life expectancy is related to the population mortality rate, especially the infant mortality rate.

Figure 1. 9 Life expectancy, by aimag, 2018, 2019

Source: NSO [www.1212.mn](http://www.1212.mn)

As of 2019, the life expectancy difference between male and female looking by aimags, in Orkhon aimag has the highest 11.7, which is by 2.3 more elevated than the national average, and Selenge, Dornogovi, Darkhan-Uul and Sukhbaatar aimags by 0.5-1.1 higher than the national average. In Govisumber aimag has 3.5, it was by 6.1 less than the national average.

Figure 1. 10 Difference of life expectancy, by aimag, 2019

Source: NSO [www.1212.mn](http://www.1212.mn)

On average, women live longer than men in every country globally, and the difference is 4.4 years. For Mongolia, female life expectancy is higher than the male by 9.6 years.

The estimates of global life expectancy are 72.0 for 2016: the country with the highest life expectancy is Japan at 84.2. It was higher by 12.2 than the global average and is Lesotho has the lowest life expectancy at 52.9.

In 2019, there was a difference between aimags and regions in average life expectancy. The lowest life expectancy is in the Khangai region of 70.95. The central region has the highest life expectancy in the population, estimated at 72.26. Indicating by aimags: Khuvsgul /67.09/, Uvs /69.77/, Dornod /69.69/ and Darkhan-Uul /68.84/ these aimags are below the national average life expectancy.

Table 1. 2 Population life expectancy, by region and aimags, 2019.

## CHAPTER II. INDICATORS FOR SUSTAINABLE DEVELOPMENT OBJECTIVES

The Sustainable Development Goals (SDGs) are set of development goals for the global development to achieve for the next decade and a half as a continuation of Millennium Development Goals. The United Nations General Assembly approved the agenda for SDGs during its 70th High-Level Meeting in September 2015, consists of 17 goals and 169 targets to achieve by the year 2030.

In 2015, at the 66th session of the Regional Committee for the Western Pacific, Member States adopted a resolution on Universal health coverage (WPR/RC66.R2) and endorsed UHC: Moving towards Better Health - an action framework that guides for Member States to accelerate progress towards UHC and some Sustainable development goal (SDG)s. UHC is defined as all people having access to quality health services without suffering the financial hardship associated with paying for care; this is the overarching vision for health sector development (WHO, 2013).

The Action Framework for the Western Pacific Region of the WHO defined 15 action domains towards achieving UHC. These action domains emphasised strong health systems based on primary health care values. They focused on a vision of providing universal coverage for quality health services can be an efficient and effective way to contribute to improved and equitable health outcomes.

The WHO Country Office has been providing technical and financial support in the health sector and advice on Mongolia's health policies, especially in improving accessibility and quality of primary health care. For instance, since 2015, under the initiative of the project named "Expanding the use of mobile health technology at the primary health care towards universal health coverage in Mongolia", it has been focusing on the implementation, based on the principle of "Leaving no one behind" and to improve capacity to deliver integrated people-centred health services to strengthen processes and pathways in achieving UHC.

In 2016, the Mongolian Parliament approved the "Mongolia Sustainable Development Vision 2030" under which Mongolia would improve living conditions for all Mongolian people to lead a healthy and long life. This includes an increase of life expectancy at birth to 78 years with other developmental objectives to reach in 2016 - 2020, 2021 - 2025 and 2026 - 2030 through the implementation of Mongolia Sustainable Development Vision 2030.

The SDGs, otherwise known as the Global Goals, are a universal call to action to end poverty, protect the planet and ensure that all people enjoy peace and prosperity. The goals are interconnected – often the key to success on one will involve tackling issues more commonly associated with another. In 2017, the Government of Mongolia endorsed the State Policy on Health (2017-2026) to support the SDGs' implementation.

By 2030, Mongolia would achieve the following targets through implementation of the Sustainable Development Vision such as end poverty in all its forms, improve the living environment of the Mongolian people to lead a healthy and long life; increase life expectancy at birth to 78 years and be placed among first 70 countries on the ranking of countries by the human development index. Out of 17 SDGs, goal 3 focused on health, aimed at ensuring healthy lives and promoting well-being for all ages.

**Objective 1.** Create a national disease prevention system, increase access to diagnostic services, and increase the population's life expectancy.

Actions towards achieving this objective include:

- Reforming the health insurance system.
- Ensuring early diagnosis and urgent responses to preventable and predominant diseases.
- Improving the capacity of investigation.
- Strengthening the early diagnostic system and reference laboratories.
- Increasing life expectancy of the population to 71 years by 2020, to 74 years by 2025 and 78 years by 2030.

**Objective 2.** Reduce factors affecting preventable maternal and child mortality by improving the quality and accessibility of reproductive health care services, and decrease maternal and child mortality and malnutrition.

Under this objective, the following targets were set:

By 2020, reduce maternal mortality ratio to 25 per 100,000 live births, under-5-child mortality to 15 per 1,000 live births and infant mortality to 13 per 1,000 live births.

**By 2025**, reduce maternal mortality ratio to 20 per 100,000 live births, under-5-child mortality ratio to 12 per 1,000 live births and infant mortality ratio to 11 per 1,000 live births.

**By 2030**, reduce the factors of preventable maternal and child mortality, and reduce maternal mortality in 100,000 live births to 15, under-5-child mortality in 1,000 live births to 9 and infant mortality in 1,000 live births to 8.

**Objective 3.** Reduce the burden of common non-communicable diseases and reduce health risk factors and preventable deaths through an active and inclusive partnership of individuals, families, communities, and organizations.

**By 2020**, reduce pernicious habits in the population, improve the living environment, strictly enforce food products standards, and decrease deaths per 10,000 populations caused by cardiovascular diseases and cancer respectively, to 17.4 and 10.5.

**By 2025**, improve the quality of and access to health care services and decrease deaths per 10,000 populations caused by cardiovascular diseases and cancer, respectively, to 16 and 9.

**By 2030**, decrease deaths per 10,000 populations caused by cardiovascular diseases and cancer, respectively, to 14 and 8.

**Objective 4.** Decrease the spread of communicable diseases through prevention, early detection, and preparedness to treat infectious diseases, by improving the rapid response capacity of health services, and by ensuring access to priority vaccines for everyone.

Under this objective, the following targets were set:

**By 2020**, increase the rate of scheduled vaccination to 98.5 per cent, and reduce the prevalence of hepatitis and tuberculosis in 10,000 populations, respectively, to 3 and 14.4.

**By 2025**, increase the rate of scheduled vaccination to 99 per cent, and reduce the prevalence of hepatitis and tuberculosis in 10,000 populations respectively, to 2.5 and 14.

**By 2030**, increase the rate of scheduled vaccination to 99.8 per cent, and reduce the prevalence of hepatitis and tuberculosis in 10,000 populations, respectively, to 2 and 13.

Table 2. 1 Health indicators of SDG, 2010-2019

Health indicators		2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

### SDG 3.1.1 Maternal mortality ratio /per 100 000 live births/

Figure 2. 1 Maternal mortality ratio, 1990 and 2019

The country's maternal mortality rate has reduced by 176.0 /per 100 000 live births/ since 1990 and Mongolia has become a country with a moderate level of maternal mortality from the country with high maternal mortality.

A target of the “National program on maternal, child and reproductive health” /2017-2021/, to reduce maternal mortality ratio to 25 by 2020 was set within the frame of the goal “to reduce maternal and child mortality by ensuring to create a favorable social and economic environment, strengthening the financial stability of the program, and enhancing an active and inclusive partnership of citizens and civil society organizations for improving the quality and accessibility of healthcare services for all”

Figure 2. 2 Maternal mortality ratio, an average 2012-2015, 2016-2019

The average in 2016-2019, the number of maternal mortality was 24, decreased by 6 or 17.8 per cent from the average of the previous four years. The maternal mortality rate per 100 000 live births on average over the last four years was 31.4, decreased by 6.1, compared to the previous four years. In 2019, the maternal mortality rate was 23.0, reaching a target of the “National program on maternal, child and reproductive health” /2017-2021/

### SDG 3.1.2 Proportion of births attended by skilled health personnel

The single most critical intervention for safe motherhood is to ensure that a competent health worker with midwifery skills is present at every birth. In case of emergency, there is a referral system to provide obstetric care at the right level of the facility.

Increasing the proportion of births delivered in health facilities is an important factor in reducing the health risks to both the mother and the baby. Proper medical attention and hygienic conditions during delivery can reduce the risks of complications and infection that can cause morbidity and mortality to either the mother or the baby. In 2019, of deliveries, 99.7% were in hospitals and 0.3% were at home. In 2019, 99.3% of all births were attended by skilled health personnel, stable over the last decade.

Figure 2. 3 Proportion of births attended by skilled health personnel, 2010-2019.

As referenced by competent maternal and newborn health professionals, the skilled health personnel educated, trained, and regulated to national and international standards. They are competent to: facilitate physiological processes during labour to ensure clean and safe birth and identify and manage or refer women and newborns with complications.

In our country context, skilled health personnel refers to obstetricians, physicians, physicians of PHC and Soum health centres, midwives are referred to as skilled health professionals.

### SDG 3.7.2 Adolescent birth rate

Age-specific fertility rate (ASFR) is several births to women of a specified age, and the rate for the 15 to 19 age group presents adolescent birth rate, one of the SDGs measures.

Having a child at an early age restricts their chances of obtaining an education. Furthermore, it increases the probability of isolating themselves from society and experiencing poverty and violence. Commonly, children born to young mothers have a higher chance of getting sick easily than dying. In contrast, mothers themselves experience pregnancy complications, even death due to lack of experience to overcome complications and preparation.

In 2019, the adolescent birth rate was 30.8 per 1000 women 15-19 aged, which is increased by 2.0 compared to 2010 and decreased by 5.3 compared to an average last decade.

Figure 2. 4 Adolescent birth rate, 2010-2019

In 2010, the percentage of mothers under 20 years old was 6.0%, which is dropped by 2.6 percent over the last decade.

Figure 2. 5 Adolescent birth rate, by location, 2010-2019

In 2019, 77 601 mothers gave birth in the country, which of the percentage of mothers under 20 years old was 4.4% (3 456). A total of newly registered pregnant women by antenatal care service, which accounts for 4.4 per cent or 3422 cases were adolescent, and this was reduced by 1.9 per cent, compared to 2007/6.3%.

Table 2. 2 Child mortality indicators of SDG, 2010-2019.

Health indicators		2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

### SDG 3.2.1 Under five mortality rate

With the SDG target for child mortality, on ending preventable deaths of newborns and children under 5 years of age, the international community has retained the overarching goal of reducing child mortality. While the global target calls for reducing neonatal mortality to at least as low as 12 deaths per 1,000 live births and under-five mortality to at least as low as 25 deaths per 1,000 live births, reducing child mortality continues to be one of the most important objectives in national plans and programs in every country.

Mongolia was set the following targets: by 2020, reduce under-5-child mortality to 15 per 1,000 live births and infant mortality to 13 per 1,000 live births.

In 2019, the under-five mortality rate is 16.1, it was not yet reached to the target and while it has been achieved in 2019, while the target of reducing the infant mortality rate to 13 and the neonatal mortality rate to 9 has been achieved by 2019, respectively.

The under-five mortality rate has decreased significantly since 1990, for the past 30 years. Under-five mortality rate per 1000 live births reduced by 71.4 and the infant mortality rate per 1000 live births reduced by 50.1 in 2019 as compared to 1990.

Figure 2. 6 Under-five mortality rate, 2010-2019

In-hospital deaths within 24 hours of admission are 28.6 percent an average last decade, in 2019, decreased by 3.4 and by 0.1, compared to the last decade and previous year, respectively.

The infant mortality rate has steadily decreased for the last years and the infant mortality rate was 13.3 in 2019, which reached the lowest level. As of 2019, the infant mortality was reported 1041 cases, including 841 cases or 80.8 percent were in-hospital deaths, of which 25.2 percent of deaths within 24 hours of admission.

Looking at last decade, perinatal disorders were the leading cause of infant mortality, reaching 552 cases or 53.0 percent in 2019, which is decreased by 2, compared to last decade and by 2.3, compared to the previous year, respectively.

Five leading causes of infant mortality were: 55.3% perinatal disorders, 16.6% congenital abnormalities, 10.5% diseases of the respiratory system, 6.5% injury, poisoning and certain consequences of external causes, and 2.5% some infectious and parasitic diseases, respectively.

In 2019, five leading causes of infant mortality were: 55.3% perinatal disorders, 16.6% congenital abnormalities, 10.5% diseases of the respiratory system, 6.5% injury, poisoning and certain consequences of external causes, and 2.5% some infectious and parasitic diseases, respectively. Compared to the previous year, perinatal disorders and diseases of the respiratory system decreased by 0.1 and 1.6 percent, and congenital abnormalities were increased by 1.9 percent.

Figure 2. 7 Infant mortality rate, 2010-2019

An average last decade in-hospital deaths within 24 hours of admission are 28.6 per cent, in 2019, decreased by 3.4 and 0.1, compared to an average last decade and the previous year, respectively. The cause of perinatal disorders accounted for 71 per cent, of In-hospital deaths within 24 hours of admission, in 2019.

On average last decade, 190 cases or 16.4 per cent were community death or without medical care, of infant mortality. In 2019, community death reported were 176 cases, accounting for 16.9 per cent of infant mortality.

### SDG 3.2.2.a Neonatal mortality rate

In 2019, the neonatal mortality rate was 8.6, decreased by 1.4, compared to the last decade. In 2019, neonatal mortality accounted for 62.2 per cent of infant mortality, an increase of 1.5 percentage from the average last decade.

Figure 2. 8 Neonatal mortality rate, 2010-2019

Looking by the last decade, perinatal disorders were the leading cause of neonatal mortality, reaching 518 cases or 80.1 per cent in 2019, which is decreased by 2, compared to the last decade and by 0.4, compared to the previous year, respectively.

The second leading cause of neonatal mortality is congenital abnormalities, and as of 2019, there were 95 cases, accounting for 14.7 per cent of all neonatal deaths. Compared to the last decade, 6 cases increased by 15 cases or 3 per cent from the previous year. The most common types of deaths due to congenital abnormalities were congenital heart defects and chromosomal disorders.

On average, in the last decade, stillbirth accounted for 0.7 per cent, of all births. In 2019, the stillbirth rate reached 5.2 per 1,000 births, decreased by 1 and 0.4, compared to an average the last decade and the previous year.

Figure 2. 9 Stillbirth and perinatal mortality rate, per 1000 births, 2010-2019

In 2019, the perinatal mortality rate reached 11.0, it was decreased by 2.9, from the average last decade. As of 2019, one of the indicators of the National Program on "Maternal, Child and Reproductive Health" the neonatal and perinatal mortality rate, has reached to target, by 2020.

### SDG 3.3.1 Number of new HIV infections per 1 000 uninfected population

The prevalence of HIV among the Mongolian population is less than 0.1%. The prevalence of HIV in vulnerable groups of people is less than 5%, making Mongolia the country with low risk in population and high-risk in vulnerable groups.

Ever since the first registered case of HIV/AIDS in Mongolia in 1992, there have been 286 cases registered by the end of 2019, of which 18 were registered in 2019.

There have been 44 people who passed away out of register 286. Of the registered 286 cases, 233 (81.5%) were males, 52 (18.2%) females, and one of uncertain gender identity.

Figure 2. 10 Number of new cases and deaths, by selected years

The majority of registered cases contracted HIV infection by sexual intercourse. Cases of passing the infection through blood transfusion, medical assistance, or mother to the child were not reported yet.

The UN General Assembly Special Session on HIV/AIDS (UNGASS) called on governments to improve young people's knowledge and skills to protect themselves from HIV. Some of the essential prerequisites for reducing HIV infection are accurate knowledge of how HIV is transmitted and strategies for preventing transmission.

In our country, an average last decade has been reported 22 cases, and the increase in sexually transmitted infections is a significant cause of the spread of the disease. The correct information is the first step towards raising awareness and giving adolescents and young people the tools to protect themselves from infection.

### SDG 3.3.2 Tuberculosis incidence per 100 000 population

Although Mongolia, like many other countries, has used the strategy of directly observed treatment, short courses (DOTS) since 1996, which has impacted the steady detection of new cases and a tendency to reduce tuberculosis cases since 2007.

It is declared that reduce to 144 the rate of tuberculosis per 100 000 populations, by 2020 in the "Concepts of Mongolian Sustainable Development-2030".

The incidence rate of tuberculosis (TB) in 1996 was 146.0 per 100 000 population, while in 2006 it reached 186, increased by 1.3 times. However, it has continuously decreased since 2007 reached 168 per 100 000 population. The incidence of TB in 2011 was 148.7, in 2019 was 113.6 per 100 000 population, respectively.

Figure 2. 11 Tuberculosis incidence and mortality, per 100 000 population

In 2019, the mortality rate of tuberculosis was 2.8 per 100 000 population, and it was two times lower compared to the mortality rate in 1996.

In 2019, reported 2234 or 61.6% were pulmonary types of tuberculosis, and 1390 or 39.4% were non-pulmonary types, a total of all cases of tuberculosis. There were 326 new tuberculosis cases registered in children which were 9.3% of all newly recorded cases.

#### SDG 3.3.4 Hepatitis b incidence per 100 000 population

Decrease the spread of infectious diseases through prevention, early detection, and preparedness to treat infectious diseases, by improving the rapid response capacity of health services, and by ensuring access to priority vaccines for everyone.

Under this objective by 2020, reduce the prevalence of hepatitis in 100000 populations to 3.

As of 2019, a total of 527 new cases of viral hepatitis were registered at the national level, out of all viral infections, 33 % was viral hepatitis A, 41.6% was viral hepatitis B, 13.5% was viral hepatitis C, and 12.0% was another viral hepatitis.

As of 2019, a total of 219 cases of viral hepatitis B were reported nationwide; the case rate was 6.9 per 100 000 population, which decreased by 1.6 cases compared to the previous year.

Figure 2. 12 Hepatitis B incidence per 100 000 population, 2010-2019

Looking by age group, the incidence rates were high among people aged 20-34 years, in 2019 and the majority diagnosed in the female.

There is a tendency that the incidence rate has decreased in recent years. The incidence was 35 per 100 000 population. In 2000, it was to 6.9 per 100 000 population in 2019, decreased by 27 per 100 000 people, compared to 2000.

Figure 2. 13 Number of hepatitis B and trends

#### SDG 3.4.1 Mortality rate attributed to cardiovascular disease, cancer, diabetes or chronic respiratory disease /per 10 000 population 30-70 aged/

As of 2016, 71 per cent due to non-communicable diseases, of all deaths globally, of which 15 million or 85 per cent were between the ages of 30 and 70 years.

Globally in 2016, the risk of a 30-year-old person dying from four major NCDs before reaching the age of 70 years was 18, it was 22 in 2000 and 19, in 2010.

In 2016, the risk of a 30-year-old person dying from four major NCDs before reaching 70 years was 21.6% for men and 15.0% for women.

In our country, the risk of a 30-year-old person dying from four major NCDs before reaching 70 years was 6.7 per cent, in 2010 and decreased to 6.5 per cent, in 2018.

In 2019, a total of 10 704 deaths were registered due to cardiovascular disease, cancer, diabetes or chronic respiratory disease, which accounted for 62.0% of all deaths, hence 60.7% for people between 30 and 70.

The mortality rate for these 4 NCD diseases between the ages of 30 and 70 was 17.3 cardiovascular diseases, and cancer was 14.3, the chronic respiratory disease was 1.1 and diabetes was 0.8, per 10,000 pop between the ages of 30 and 70. Looking at reported cases between 2010-2019 years, tend to decrease the mortality rate due to cardiovascular disease, while an increase in deaths due to cancer and diabetes.

Figure 2. 14 Mortality rate due to cardiovascular disease and cancer, between 30 and 70 ages, per 10 000 pop, 2010-2019.

Figure 2. 15 Mortality rate due to chronic respiratory disease and diabetes, between 30 and 70 ages, per 10 000 pop, 2010-2019.

The mortality rate for these 4 NCD diseases was significantly higher among the males between the ages of 30 and 70, which is higher than women by 31.0 per 10,000 pop.

SDG 3.4.2 Suicide mortality rate /per 100 000 population/

Globally, close to 800,000 people die from suicide every year. Over the last ten years, approximately 16.9 thousand deaths were recorded per year an average, of which 2.8% of deaths were suicide deaths.

As of 2010, a mortality rate of suicide was reported at 17.5 per 100 000 pop, while the rate decreased to 14.0 in 2019. The suicide mortality during 2010-2019 years accounted for 85.0 per cent for males of the total suicide deaths.

Figure 2. 16 Suicide mortality rate /per 100 000 population/, by sex

In 2019, the number of suicides was 447, accounting for 2.6 percent of all deaths. Compared to the average last decade, the total number of death decreased by 14 cases, for women 20 and male 5.

#### SDG 3.6.1 Death rate due to road traffic injuries /per 10 000 population/

Due to road traffic injuries, there were 23.6%, all of the mortality due to injuries, poisoning, and other consequences of external causes. In the average last decade, there were reported 556 cases of deaths due to road traffic injuries. In 2019, the number of deaths due to road traffic injuries was 557, there was an increase of 1 and 35 cases, compared to an average last decade and previous year. The deaths due to road traffic injury rate for males is 3.4 times higher than for females.

Figure 2. 17 Death rate due to road traffic injuries /per 10 000 population/, 2009-2019

### SDG 3.C.1 Health worker density and distribution

In 2019, the healthcare employees were 171.4 per 10 000 pop, and increased by 37, compared to 2000 and 5.7, compared to the previous year.

Figure 2. 18 The healthcare employees, 2010-2019

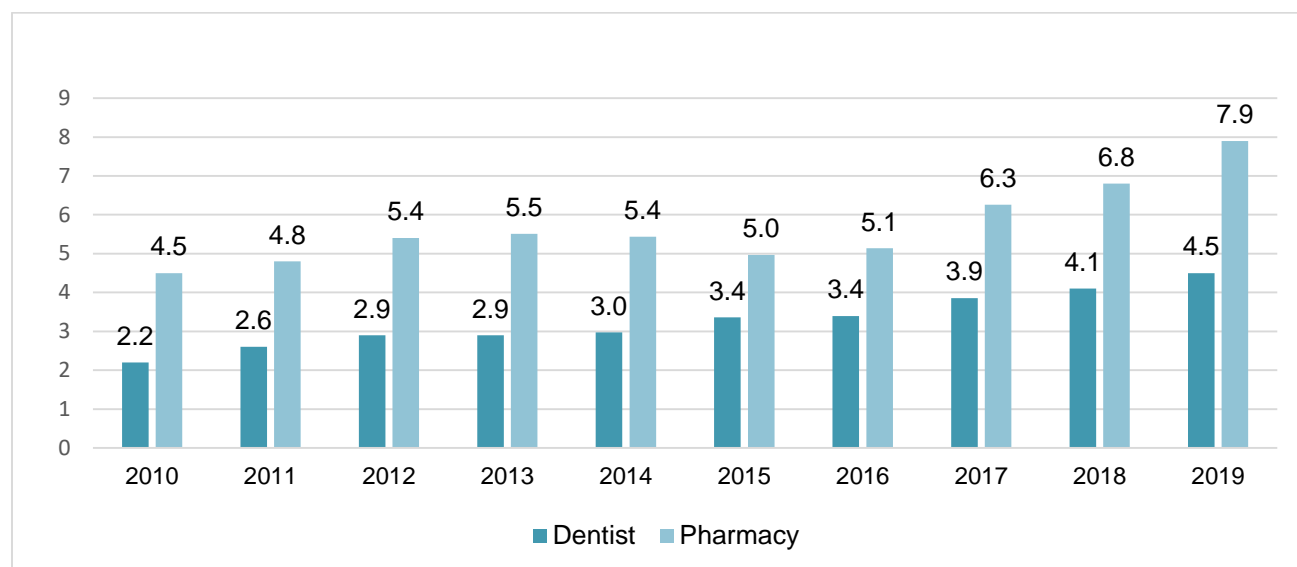

As of 2019 in Mongolia, there were 37.3 physicians, 40.4 nurses, 3.3 midwives, and 7.9 pharmacies per 10 000 pop, respectively. The total number of physicians and nurses per 10 000 pop increased by 9.6 and 8.9, compared to 2000, while 1.9 and 1.3, compared to the previous year, respectively.

Figure 2. 19 Number of a physician, nurses, and midwives, per 10 000 pop, 2010-2019.

The number of pharmacists has been increasing in recent years, nationwide, in 2010 there was 1176, an increase to 2509, in 2019.

Figure 2. 20 Number of dentist and pharmacist, per 10 000 pop, 2010-2019

## CHAPTER III. MATERNAL AND CHILD HEALTH

The Government of Mongolia has approved a “National program on maternal, child and reproductive health” by the Government Resolution No.78, on March 07, 2017.

Implementation of the program during 2017-2021 to reduce maternal and child mortality by ensuring to create a favourable social and economic environment, strengthening the financial stability of the program, and enhancing an active and inclusive partnership of citizens and civil society organizations for improving the quality and accessibility of healthcare services for all.

### 3.1. Pregnancy control and antenatal care services

Antenatal care is the most important service for reaching pregnant women with several interventions that health and well-being and that of their infants and risks and symptoms in pregnancy and the risks of labour and delivery, which is recognized as an important factor in improving infant survival.

WHO recommends a minimum of eight visits for antenatal care. WHO guidelines are specific on the content of antenatal care visits, which include blood pressure measurement, urine testing for bacteriuria and proteinuria, blood testing to detect syphilis and severe anaemia, weight/height measurement.

It is crucial for pregnant women to start attending antenatal care visits as early in pregnancy as possible and ideally have the first visit during the first trimester to prevent and detect pregnancy conditions that could affect both the woman and her baby. Antenatal care should continue throughout the entire pregnancy.

As specified in the national guidelines, during pregnancy, women should attend antenatal health check at least six times for normal pregnancy and at least eight times for high-risk pregnancy and is instructed to attend antenatal care service within 12 weeks after becoming aware of the pregnancy.

In 2019, a total of 78 516 pregnant women newly registered by antenatal care service and 88.7% of them at the first trimester or first three months, 10.2% at the 4-6 months, and 1.1% at the seven months or late entry into antenatal care, respectively.

Figure 3. 1 Percentage of early antenatal care, 2010-2019.

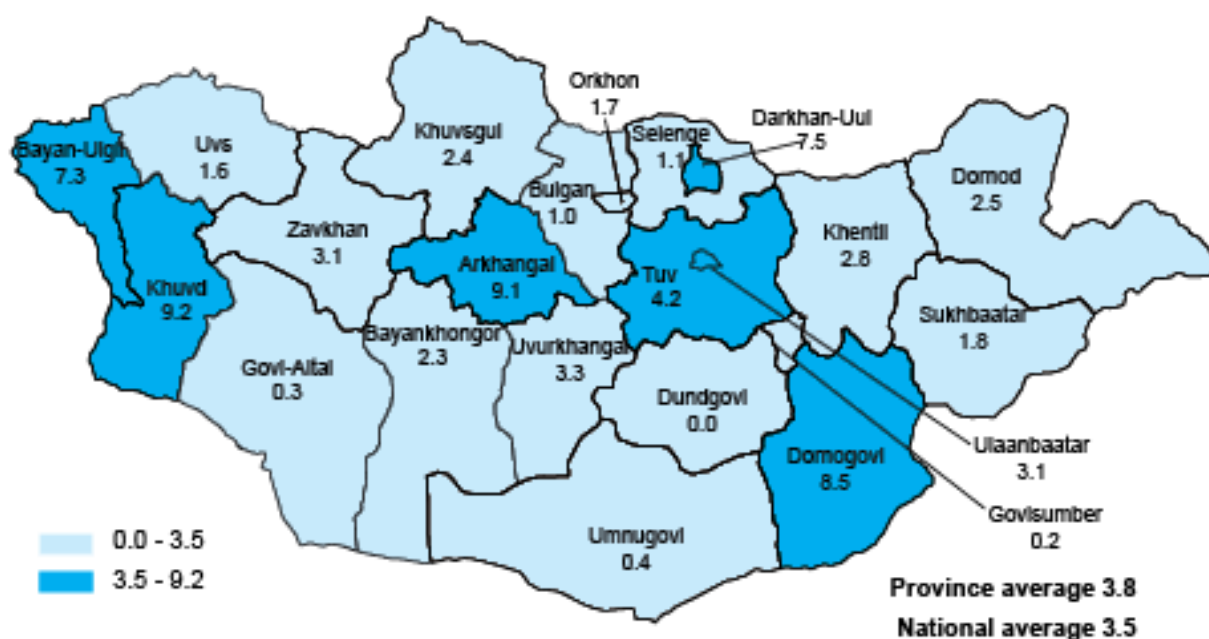

Early antenatal care services in urban vs rural areas showed that 89.0% were in urban areas, 88.3% were in rural areas. Both indicators have increased by 0.5% and 0.6%, respectively, compared to the previous year.

Overall anaemia prevalence among pregnant women who attended the pregnancy control was 3.5% and increased by 0.1% compared to the previous year.

The percentage of pregnant women with anaemia was 3.8-5.7 times higher than the national average in Arkhangai, Bayan-Ulgii, Darkhan-Uul, Dornogovi, and Khovd aimags.

Figure 3. 2 Percentage of pregnant women with anemia, 2019

The total participation rate was 98.8% who was provided with a blood sample for the antenatal syphilis test. Overall syphilis positivity was 2.0% of pregnant women and, the following areas were 0.2-2.6 times higher than the country average: Orkhon/3.3/, Uvs/2.2/, and Khuvsgul /4.6/, respectively.

Gonorrhoea screening covered 91.5% of pregnant women, which has increased by 0.2 per cent from the previous year. Overall gonorrhoea positivity was 0.4% of pregnant women and, the following areas were 0.7-2.5 times higher than the country average: Bayankhongor /2.9/, Dornod /0.7/, Sukhbaatar /1.1/, and Khuvsgul /2.5/, respectively.

The total participation rate for trichomoniasis testing was 91.9%, and 1.8% of pregnant women were positive for this test. The following areas were 0.8-7.4 times higher than the country average: Bayankhongor /9.2/, Bulgan /4.3/, Darkhan-Uul /3.1/, Dornod /3.8/, Orkhon /3.3/, Sukhbaatar /3.3/, Selenge /3.8/, Tuv/3.8/ and Khentii /2.6/, respectively.

During the antenatal period, 44.6% of pregnant women have taken X-ray examinations and were identified 201 cases or 0.6% of active tuberculosis.

A total of 334 maternal resting wards were functioning throughout the country in 2019, of which 258 were in soum health centres, 39 in inter-soum hospitals, 18 in aimag's general hospitals, 10 in village health centres, 5 in rural general hospitals, 4 in Regional Diagnostic and Treatment Centers (RDTC) and 1 in hospital of Ulaanbaatar, respectively.

Out of all maternal resting wards, 117 or 33.4% located in designated buildings and 64.3% /215/ located in clinics and total of 61 034 bed days were used, and the average length of stay at a maternal resting ward was 6.1 days.

A total of 3 new maternal resting wards were built, in 36 places building maintenance or renovation and 72 places comport improvement was completed in 2019. Of mothers required for antenatal resting service, 72.3% went to resting wards.

### 3.2 labour and delivery health care services

On average, in the last five years, 76.6 thousand mothers gave birth to 77.5 thousand children nationwide, of which 77.1 thousand were live births, and 445 were stillbirths.

The average last four years' live birth decreased by 2.2 thousand or 2.8 per cent compared to the previous four years, which was mainly due to 4.3 thousand in 2017, a decrease of 3.9 thousand or 4.9 per cent, compared to the last year.

On average last four years, stillbirths accounted for 0.6 per cent of the total births, which is decreased by 0.1 per cent compared to the average the previous four years. The average last four years' number of stillbirths has reached 6 and declined by 1, from the regular previous four years.

Figure 3. 3 Live birth and stillbirth rate, on average 2012-2015, 2016-2019

The crude birth rate represents the number of births per 1000 people in a given year. In 1990, the number of births per 1000 person was 35.3, in Mongolia, it has decreased to 17.8, in 2005, two times dropped the lowest level and increased steadily from 2006 to 25, in 2019.

The general fertility rate represents the number of births per 1000 women of childbearing age (15-49 years) in a given year. As of 2019, this shows, 94 out of 1,000 women of childbearing age (15-49 years) have who give birth.

Figure 3. 4 The crude birth and general fertility rate, 2010-2019

The age-specific fertility rate represents the number of births per 1000 women in a specific age group in a given year. The highest age-specific fertility rates (ASFR) were found among 20-24 years old with 156 per 1000 women and 25-29 years old with 170.9 per 1000 women.

Table 3. 1 The age-specific fertility rate, 2019

Age group	Number of women of reproductive age	Number of live births given by women of reproductive age	Age-specific birth rate
Under 20	150023	3443	22.9
20-24	112328	17607	156.7
25-29	129271	23251	179.9
30-34	143231	19794	138.2
35-39	119852	11303	94.3
Above 40	207523	2825	13.6

In 2019, 77 601 mothers gave birth in the country, which compared to 2018, the number of births has increased by 543 cases or 0.9%. Increasing the proportion of births delivered in health facilities is an important factor in reducing the health risks to both the mother and the baby. Proper medical attention and hygienic conditions during delivery can reduce the risks of complications and infection that can cause morbidity and mortality to either the mother or the baby. In 2019, 99.7 per cent were in the hospital, and 0.3 per cent were at home birth, of all deliveries.

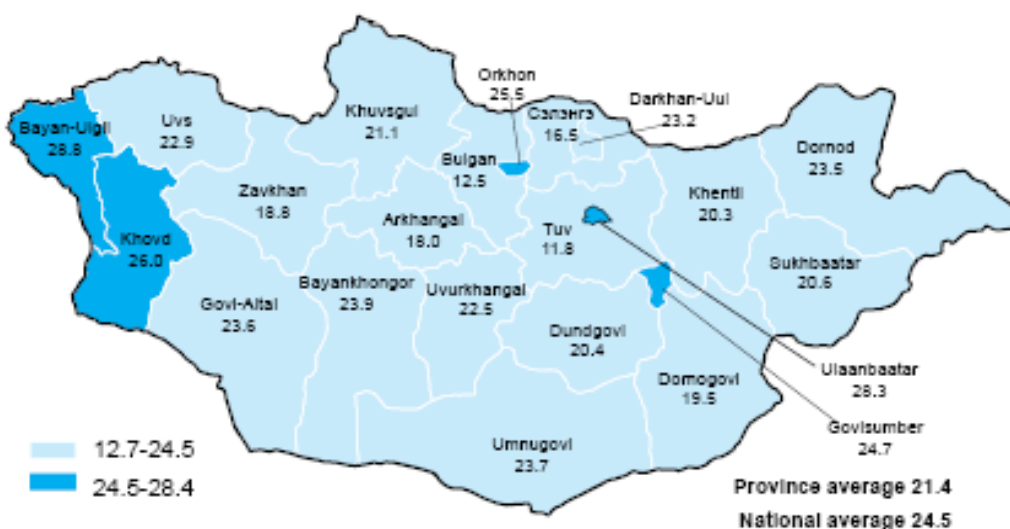

The percentage of births delivered were attended by skilled health personnel is 99.3, which has been stable for the last decade. Of deliveries, 25.7% were first birth, 50.3% were 3 or more year's intervals birth, respectively. The percentage of mothers under 20 years old was 4.4% while mothers aged over 35 years was 18%. In 2019, the adolescent birth rate was 30.8 per 1000 women 15-19 aged, which is increased by 2.0 compared to 2010 and decreased by 5.3 compared to an average last decade.

Out of a total birth, which is 48.0% were in Ulaanbaatar city, 29.8% were in aimag centre general hospitals, 12.5% were in RDTCs, 4.8% were in soum, inter-soum and village hospitals, 2.3% were in the rural general hospital, 2.5% were in private clinics and the National Center for Infectious Diseases, and 0.4% were at home births.

By estimating the general fertility rate, 92 out of 1 000 women of reproductive age gave birth in 2018. Birth numbers increased in Bayan-Ulgii, Bayankhongor, Govi-Altai, Uvurkhangai, Umnugovi, Khentii aimags, and Ulaanbaatar city, but decreased in other aimags.

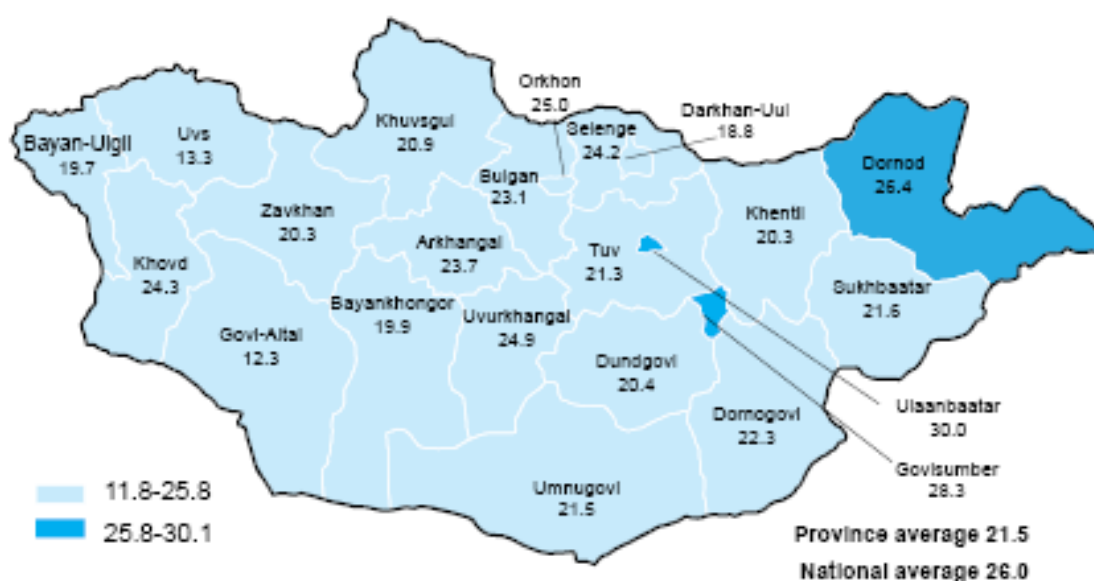

The crude birth rate per 1000 people is 24.5 in the country, and this indicator is higher than the national average in Bayan-Ulgii /28.8/, Orkhon /25.5/ and Khovd /26.0/ aimags.

Figure 3. 5 Crude birth rate, per 1000 population, by aimags, 2019

47.7% of total births were in State Research Center for Maternal and Child Health and Maternal hospital in Ulaanbaatar city, 29.3% were in aimag center general hospitals, 12.6% were in RDTs, 4.8% were in soum, inter-soum, and village hospitals, 2.4% were in a rural general hospital, 3.0% were in private clinics and the National Center for Infectious Diseases.

Figure 3. 6 Percentage of cesarean section among deliveries, by aimags, 2019

The World Health Organization (WHO) recommended level of cesarean sections (C-section) is 5-15% from all deliveries. In 2019, the percentage of births by C-section was estimated at 26% in Mongolia, which is considered relatively high. The number of C-sections has increased by 1.2% (252 cases) compared to the previous year. The C-section rate was lower than the country average by 2.9 points in the Western and Central regions. In contrast, it was higher by 0.1-1.6 points in Khangai, Central and Eastern regions.

Table 3. 2 Percentage of cesarean section among deliveries, by regions, 2019

	Mothers gave births	Number of C-section	percentage
Western region	9846	1831	18.6
Central region	12565	2881	22.9
Khangai region	9602	2076	21.6
Eastern region	4765	1101	23.1
Province average	<b>36778</b>	<b>7889</b>	21.5
Ulaanbaatar	40823	12250	30.0
<b>National average</b>	<b>77601</b>	<b>20139</b>	26.0

A total of 229 home births have registered, which increased by 78 cases or 34.0 per cent compared to the previous year. Of those home births, 55.4% have occurred in Ulaanbaatar, and this number has decreased by 1.9% from the previous year.

A total number of 60 birth cases were registered, which were not attended by skilled health personnel and the number of cases decreased by 80.0% (48 cases) compared to the same period of the previous year. Furthermore, 19.7% (8 069) of all mothers who gave birth in Ulaanbaatar hospitals came from the countryside. This number has increased by 646 births from the previous year.

Figure 3. 7 Number of mothers from the countryside who gave birth in Ulaanbaatar, 2019

### 3.3 Post-delivery health care services

The time of birth and immediately after is a critical window of opportunity to deliver life-saving interventions for both the mother and newborn. Across the world, approximately 3 million newborns annually die in the first month of life<sup>5</sup>. The majority of these deaths occur within a day or two of birth, which is also when the majority of maternal deaths occur.

In 2019, 88.5% of mothers under prenatal care received postnatal care or post-delivery maternal care within 42 days of birth, which has increased by 1.0 point compared to the previous year. This indicator is imperative in reducing post-delivery complications and maternal mortality.

In connection with pregnancy, childbirth, and post-delivery complications, a total of 55 695 cases (712 per 1,000 live births) were recorded in 2019. Among those cases the following complications occurred:

- Complications during pregnancy -43.5 %
- Delivery complications -54.0%
- Postpartum complications -2.5% and
- Other complications not associated with pregnancy and delivery-10.8%, respectively

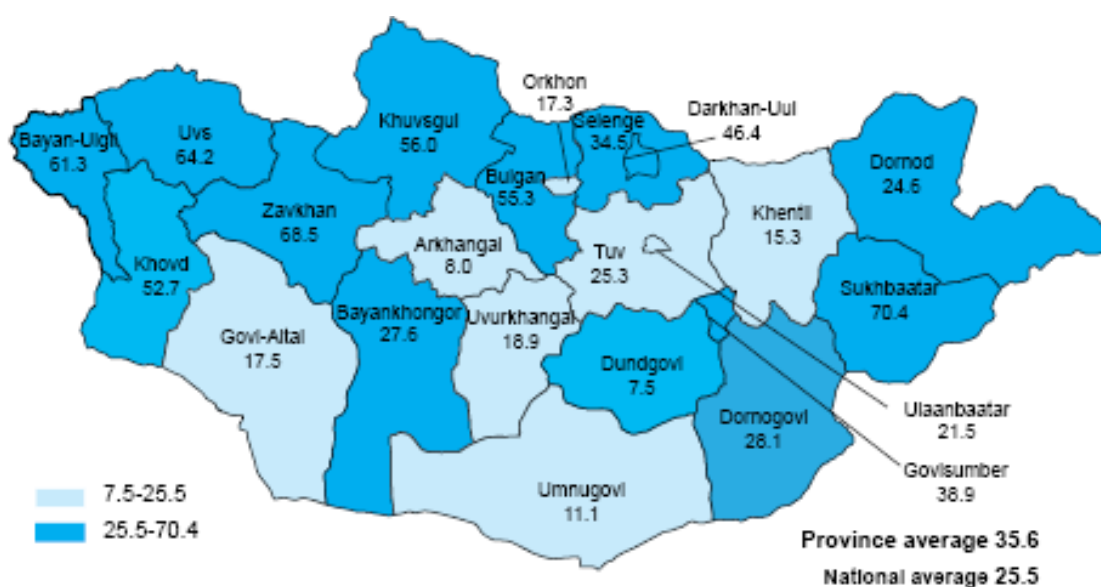

Figure 3. 8 Percentage of pregnancy, childbirth and post-delivery complications, by type of health facility, 2019

In 2019, 66 cases of congenital syphilis had registered, which increased by 17 cases from the previous year. Those occurrences are reported in the following areas: Ulaanbaatar 48, Bayankhongor 1, Bulgan 1, Dornogovi 1, Dornod-3, Zavkhan1, Orkhon 5, Tuv 2, Khovd 1 and Khuvsgul aimags 2 cases, respectively.

The increase in the number of pregnant women with sexually transmitted diseases (STIs) and the birth of children with congenital syphilis suggests a need for early detection and treatment of infections in pregnant women and improving the quality of antenatal care services.

Figure 3. 9 Percentage of eclampsia in pregnancy complications by aimags, 2019

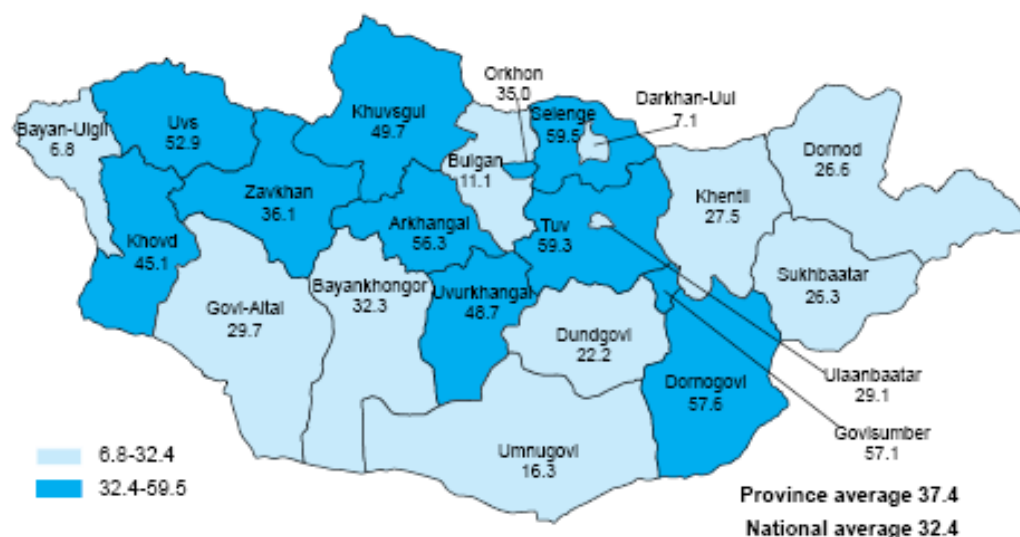

The percentage of eclampsia-pregnancy complications was 1.3-2.7 times higher than the country average in Bayan-Ulgii /61.3/, Zavkhan /68.5/, Sukhbaatar /70.4/, Uvs /64.2/, Darkhan-Uul /46.4/, Selenge /34.5/, Bulgan /55.3/, Khovd /52.7/, Khuvsgul /56.0/ and Govisumber /38.9/ respectively.

On the contrary, it was 2.2-3.4 times lower than the country average in Arkhangai /8.0/, Dundgovi /7.5/, and Umnugovi /11.1/ respectively.

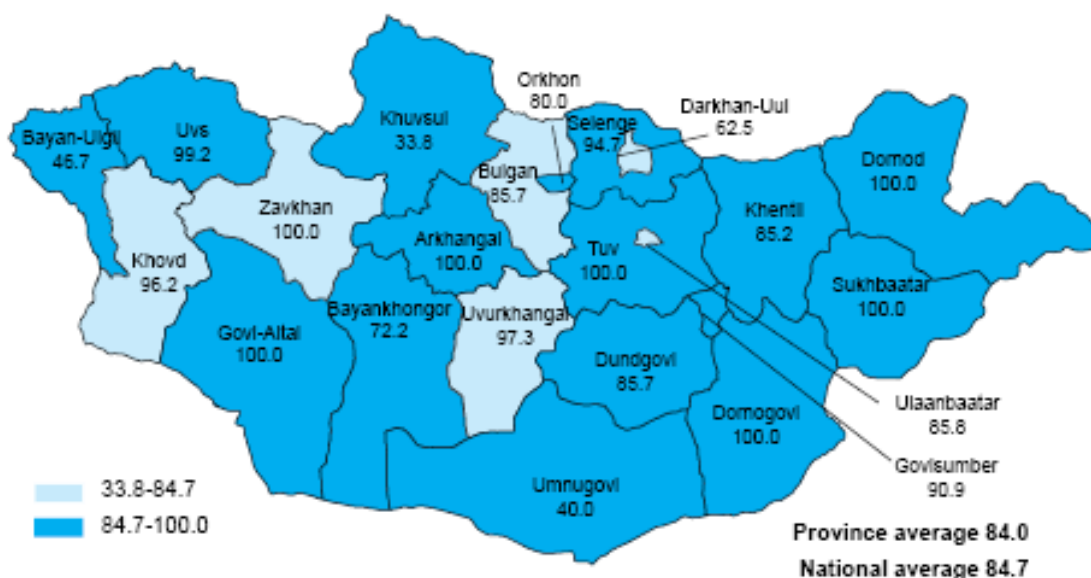

The percentage of pregnancy-related complications such as pre-eclampsia and eclampsia was 25.4% and 0.1% respectively. First and secondary failure to progress in labour was in 32.4% which were the most common complications during birth. Postpartum hemorrhage accounted for 84.7% of all post-delivery complications.

Figure 3. 10 Percentage of failure to progress in labor by aimags, 2019

The percentage of failure to progress in labor during the childbirth was 1.3-1.8 times higher than the country average for the following aimags; in Arkhangai /56.3/, Govisumber /57.1/, Dornogovi /57.6/, Uvurkhangai /48.7/, Selenge /59.5/, Tuv /59.3/, Uvs /52.9/, Khovd /45.1/ and Khuvsul /49.7/, respectively.

Figure 3. 11 Percentage of postpartum hemorrhage, 2019

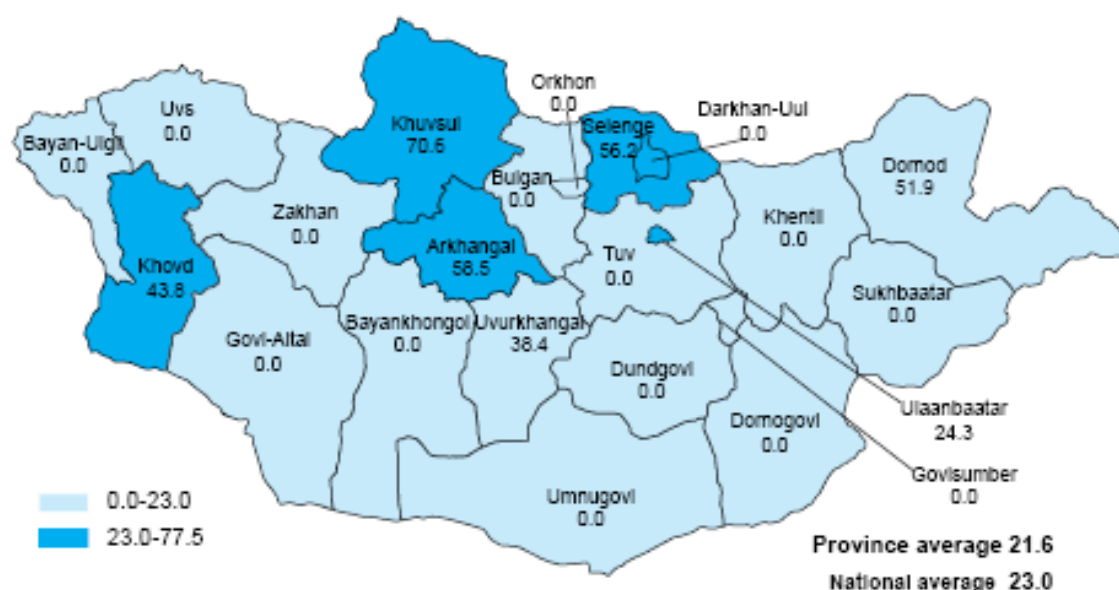

### 3.4 Maternal mortality

The country's maternal mortality rate has reduced 4.6 times since 1990 and Mongolia has become a country with a moderate level of maternal mortality from the country with high maternal mortality. In 2019, 18 maternal mortality cases recorded, and it was 23.0 per 100 000 live births.

Compared to 2018, maternal mortality has decreased by 3 cases or 4.1 per 100 000 live births. No maternal deaths recorded in Bayan-Ulgii, Bayankhongor, Bulgan, Govi-Altai, Govisumber, Dornogovi, Dornod, Dundgovi, Zavkhan, Orkhon, Umnugovi, Tuv, Uvs, and Khentii aimags. 88.9% of maternal deaths occurred in hospitals and 11.1% at home.

Figure 3. 12 Maternal mortality per 100 000 live births by aimags, 2019

Maternal deaths by mother's education are shown as follows: 44.4% higher, 50.0% secondary, and 5.6% vocational and technical education, respectively. Maternal deaths by mother's occupation are shown as follows: 39.8% employed, 27.8% herder, and 33.3% unemployed.

By looking at the type of health facility where maternal deaths occurred, 16.7% of deaths were in soum health centres, 16.7% in aimag general hospitals, 16.6% in city maternity hospitals, 11.1% in RDTC, 27.7% in Third State Central hospital and 5.6% in NCMCH.

44.4% of maternal mortality was from pregnancy-related complications, 11.2% was from birth complications, 44.4% was from post-delivery complications. This data shows that pregnancy-related complications are decreased by 7.9%, whilst birth complications are decreased by 6.5, and post-delivery complications decreased by 1.3%, respectively, compared to the previous year.

Table 3. 4 Maternal mortality rate per 100 000 live births by age groups, 2019

Age groups	Number of maternal death	Percentage	Number of live births	Maternal mortality ratio, per 100 000 live births
Under 20	0	0	3443	0.0
20-24	1	6	17607	5.7
25-29	5	28	23251	21.5
30-34	7	39	19794	35.4
35-39	3	17	11303	26.5
40 and above	2	11	2825	70.8

The maternal mortality rate per 100 000 live births was estimated at 35.4 among the women aged 30-34 years, 70.8 among the women aged 40 and above years, respectively, which was higher than the country average by 12.4-47.8 promile.

Figure 3. 13 Maternal mortality rate per 100 000 live births by region, last 3 years

Maternal mortality rate per 100,000 live births was lower than the country average in the Khangai and Western regions by 12.7-13.0 promise, though higher than the country average in Ulaanbaatar, Tuv, and Western regions 1.2-18.7 promile. In 2019, the maternal mortality rate in Tuv and Eastern region was 31.5-41.7 per 100 000 live births, which increased by 0.5-41.7 promile compared to the previous year.

### 3.5 Live births

As of last decade show births, were 81.7 thousand children born, in 2014, considered as the highest birth rate.

Figure 3. 14 The births, 2010-2019

On average, in the last decade, stillbirth is accounting for 0.6 per cent, of all births. In 2019, the stillbirth rate (per 1,000 live births) reached 5, compared to an average the last decade and the previous year, decreased by 1, respectively. Of the live births, 40,096 or 51.3 per cent were boys and 38,127 or 48.7 per cent were girls.

Figure 3. 15 Number of the live births, by sex, 2009-2019

In our country, the sex ratio at birth was 105 boys per 100 girls in 2019. The sex ratio at birth is looking by aimag, there were Bulgan has 119 boys for every 100 girls, while Dornod has 100 boys for every 100 girls.

Figure 3. 16 The sex ratio at birth, 2009-2019

The crude birth rate per 1000 people is 24.5 in the country. Of all live births, there were 1 969 twins, and 41 triplets. Stillbirths were 5.2 per 1000 births and of the total, 405 stillbirths were recorded, which decreased by 8.1% (33 cases) compared to the previous year.

Table 3. 5 Live births, by region, 2019

Region	Number of live births				Total births	
	Total	Male	Female	Sex ratio /per100/	The percentage of low birth weight	Stillbirth / per 1000 births/
Western region	9913	5109	4804	106.3	4.9	7.1
Central region	9657	4990	4667	106.9	3.1	4.1
Khangai region	12662	6610	6052	109.2	3.8	4.6
Eastern region	4785	2414	2371	101.8	2.8	6.1
<b>Aimag avarege</b>	<b>37017</b>	<b>19123</b>	<b>17894</b>	<b>106.9</b>	<b>3.8</b>	<b>4.4</b>
Ulaanbaatar	41206	20973	20233	103.7	4.9	5.9
<b>National average</b>	<b>78223</b>	<b>40096</b>	<b>38127</b>	<b>105.2</b>	<b>4.4</b>	<b>5.2</b>

When an infant receives appropriate healthcare and social service up to one month after birth, it gives increasing probabilities to survive and it can be an essential base-line for further development and healthy growth.

In 2019, 96.7% of newborns were breastfed within the first hour of life. This indicator was 1.8-6.3% lower than the country average in Arkhangai, Bulgan, Darkhan-Uul, Uvurkhangai and Uvs aimags. Weight at birth is a good indicator not only of a mother's health and nutritional status but also the newborn's chances for survival, growth, long-term health and psychosocial development.

Low birth weight (defined as less than 2,500 grams) carries a range of grave health risks for children. Babies who were undernourished in the womb face a greatly increased risk of dying during their early days, months and years. Those who survive may have impaired immune function and increased risk of disease; they are likely to remain

undernourished, with reduced muscle strength, throughout their lives, and suffer a higher incidence of diabetes and heart disease in later life. Children born with low birth weight also risk a lower IQ and cognitive disabilities, affecting their performance in school and their job opportunities as adults.

On average last decade, a total of 3306 newborns and with 4.3% had birth weight lower than 2500 grams. In 2019, a total of 3416 newborns and with accounting 4.4%, of total newborns, which increased by 498 cases compared to 2010.

Figure 3. 17 Number of births with low weight, 2010-2019

As of 2019, the live births by sex are as follows: which 4.0 per cent was weight lower than 2500 grams, 11.2 per cent weighed 2,500-3,000 grams, and the majority, or 80 per cent, weighed 3,000-4,000 grams, of the boys. While there was 4.5 per cent with low weight or less than 2500 grams, 13.2 per cent weighed 2,500-3,000 grams, and about 70 per cent, weighed 3,000-4,000 grams, of the girls.

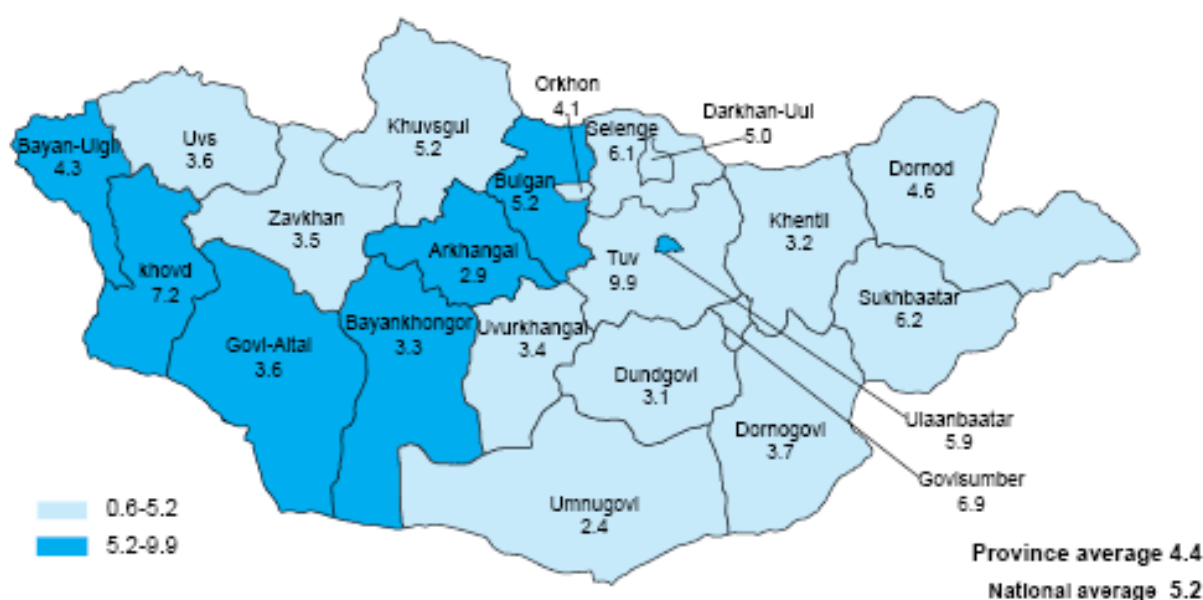

### 3.6. Stillbirths

On average the last decade, the stillbirth was accounting for 0.7 percent, of all births. In 2019, the stillbirth rate is 5.2 (per 1,000 births), which decreased by 1 and 0.4 per 1000 births, compared to on average last decade and the previous year, respectively.

Table 3. 6 Stillbirth rate and perinatal mortality rate, 2009-2019

Indicator	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
<b>Stillbirth / per 1000 births/</b>

National average	7.0	7.3	7.0	6.7	6.7	6.4	6.8	6.2	6.0	5.6	5.2
<b>Perinatal mortality /per 1000 births/</b>											
Aimag average	17.0	18.2	17.4	14.6	14.4	14.3	13.5	12.6	11.9	10.8	10.6
Ulaanbaatar	16.8	15.4	13.2	14.3	14.3	14.7	15.6	13.2	12.9	12.8	11.4
National average	16.9	16.9	15.4	14.5	14.4	14.5	14.6	12.9	12.4	11.9	11.0

Figure 3. 18 Stillbirth rate /per 1000 births/, by aimag, 2019

The stillbirth rate of Govisumber, Sukhbaatar, Selenge, and Tuv aimags was 6.2-10.0 per 1000 births, which is higher than the country average by 1.0-4.8 cases per 1000 births. For the Central region, the stillbirth rate was estimated at 10.0 per 1000 births in Tuv aimag, which was higher than the regional average by 4.5 cases per 1000 births.

The stillbirth rate in the Khangai and Central regions was lower than the country as well as aimags average. Of stillbirths, 53.8% were boys. The sex ratio at birth was 105.4.

### 3.7 Abortion

Mongolia is one of the countries that legalized abortion in 1989. The government aims at decreasing the abortion rate per 1,000 live births from 224 to 200 between 2016 and 2020, as indicated in the National Maternal and Child Health.

Most women who have an abortion do so because they become pregnant when they do not intend to. In developing countries, 84 per cent of unintended pregnancies occur among women who have an unmet need for modern contraception. Thus, the magnitude of induced abortion is an essential indicator of the effectiveness of both the supply and demand sides of the family planning programs.

The abortion ratio is the number of induced abortions, divided by the live births during the same period, expressed per 1,000 live births and it was 198.0, in 2019, which decreased by 8.4, compared to 2010.

The general abortion rate (GAR) is the number of induced abortions occurring during the specified period per 1,000 women age 15-49. In 2019, 15 485 cases of abortion were recorded with a ratio of 198.0 per 1000 live births and 18.9 abortions per 1000 women of reproductive age.

Figure 3. 19 The abortion, 2010-2019

The abortion rate has decreased by 337 cases or 2.2% compared to the previous year, which corresponds to 6 per 1000 live births. The abortion rate was higher by 17.8-235.2 promile than the country average in some areas namely, Umnugovi /433.2/, Darkhan-Uul /238.1/, Dornogovi /215.8/, Dornod /219.0/ and Ulaanbaatar /271.7/. Abortions performed in private hospitals have decreased by 270 cases or 7.9 per cent compared to the last year. The late abortion rate per 1000 live births was 8.6.

The abortion rates by age group were as follows: women aged under 20 years-5.0%, 20- 34 years olds-68.6% and over 35 years olds-26.3%. Compared to the previous year, the abortion rate among women aged under 20 years was decreased by 0.5 per cent.

The percentage of women who underwent abortion the first time has decreased by 0.2% (17 cases) compared to last year, and 13.0% of women who had abortions never gave birth.

A total of 8 cases with abortion complications was recorded. These complications of the abortion were: bleeding due to weakening of uterine contractility 37.5%, an inflammation of the uterine appendages 27.5%, and uterus punctured problem 25%, respectively.

Table 3. 7 The abortion, by type of health facility, 2019

№	Type of health facility	Number of abortion	Percentage
1	National Center for Maternal and Child Health	1748	11.3
2	Maternal Hospital	7284	47.0
3	District public health center	89	0.6
4	Private hospital	3392	21.9
5	Regional diagnostic and treatment centers	695	4.5
6	Aimag general hospital	2104	13.6
7	Rural general hospital	81	0.5
8	Inter soum hospital	4	0.0
9	Villag health center	0	0.0
10	Soum health center	3	0.0

11	Others	85	0.5
<b>Total</b>		<b>15485</b>	<b>100.0</b>

### 3.8 Contraception

Appropriate contraceptive use is important to women and children's health by preventing pregnancies that are too early or too late, extending the period between births, and limiting the total number of children. Methods of contraception are divided into modern and traditional methods. Modern methods consist of pills, IUDs, injections, Norplant/implants, diaphragms, and condoms.

In 2019, according to the health statistics, 565 women out of 1000 reproductive age and 55.0% of women aged 15-49 years had used any contraceptive method. Statistics on use of contraceptive methods were as follows: condoms-29.8%, intrauterine devices-26.4%, pills-22.4%, injectable contraceptives -7.3%, Norplant-2.9%, sterilize -1.9 % and others -9.0%, respectively. 13.1% of women who have been using contraceptive methods stopped using them, and 1.0% of them got pregnant.

The study on the use of contraception "Social indicator Sample Survey-2018", which surveyed married and living with partners women aged 15-49 years, showed that regardless of their perception about contraceptive methods, just over half (48.1%) of women used the modern methods of contraception.

*Table 3. 8 Use of contraception, by location, 2019*

Nº	Location	Number of women using of contraception	Percentage
1	Ulaanbaatar	224809	48.5
2	Aimag	97632	21.1
3	Soum health center	88437	19.1
4	Bag	52344	11.3
<b>Total</b>		<b>463222</b>	<b>100</b>

### 3.9 Child and adolescent health

As of 2019, there are 1,261.1 thousand children and adolescents in Mongolia, which accounts for 38.3 per cent, of the total population. The children under one year are 2.2 per cent, 9.5 per cent are 1-4 years old, 11.3 per cent are 5-9 years old, 8.5 per cent are 10-14 years old, and 6.8 per cent are 15-19 years old.

Figure 3. 20 Number of child and adolescent, 2019

### 3.10 Indicators of child health care

As of 2019, a total of 707 paediatricians are providing medical care to children under age 18, with about 1,600 children per doctor. The number of paediatricians increased by 213, and the number of paediatricians per 1,000 children increased by 0.1, respectively, compared to 2010.

Figure 3. 21 The number of paediatricians, 2010-2019

Although the number of paediatricians has been increasing year by year, the number of children per doctor remains high. In 2010, the average number of children per paediatrician was 1,608, which increased to 1,628 in 2019. In 2014, 2015, which is lower depending on the number of children, and trending were suspected to increase in the prospect.

The number of children per paediatrician varies by region and is highest in the eastern region, higher by 314 children than the national average.

As of 2019, in Ulaanbaatar is lower, though higher in rural or all regions, than the national average. Looking by aimags as follows, which is lower in Orkhon, Umnugovi, Khentii, Arkhangai, Zavkhan, and Dornogovi aimags, compared to the national average.

Figure 3. 22 Number of children per pediatrician, by region, 2010-2019

### 3.11 Inpatient care

As of 2019, there were 3274 hospital beds for paediatricians, which accounts for 12.8 per cent, of the total hospital beds operating nationwide. In 2010, there were 2,315 hospital beds for paediatricians, which accounted for 13.0 per cent of the total number of beds. The number of beds for paediatricians is increasing every year, though the percentage of beds has decreased.

Figure 3. 23 The number of hospital beds for pediatricians, 2010-2019

### 3.14 Immunization

Immunization is a proven tool for controlling and eliminating life-threatening infectious diseases and is estimated to avert between 2 and 3 million deaths each year. It is one of the most cost-effective health investments, with proven strategies that make it accessible to even the most hard-to-reach and vulnerable populations.

The WHO Recommended Routine Immunisations for Children recommends all children to be vaccinated against tuberculosis, diphtheria, tetanus, pertussis, polio, measles, hepatitis B, Haemophilus influenzae type b, pneumococcal bacteria/disease, rotavirus, and rubella.

Before 2005, children were immunized by receiving the Tuberculosis vaccine, three doses to DPT (diphtheria, pertussis, and tetanus) vaccine, Hepatitis B vaccine, and Measles vaccine.

Starting from 2005, new combined vaccines such as vaccines against diphtheria, pertussis, tetanus, hepatitis B, and Haemophilus Influenza B and since 2009, a vaccine against Measles, Mumps, and Rubella have been included in the “National Plan for Mandatory Vaccination”. In 2011, a vaccine against Hepatitis A has been also incorporated into the “National Plan for Mandatory Vaccination”, however, the current survey has not covered this module.

A total of 0.7% of live births were recorded with congenital abnormalities. The incidence of congenital abnormalities was estimated at 6.8 per 1 000 total births. In 2018, active monitoring rates of infants and children under-five years were 84.7% and 69.3% respectively.

Total of 25 874 neonatal morbidity cases was registered in 2018, which is accounted for 33.3% of all live births.

## CHAPTER 4. MEDICAL CARE SERVICE

Mongolia's health facilities system consists of state-owned, private and mixed-owned health facilities that are in charge of public health, medical care service, pharmaceuticals supply, health education, research, and training. The integrated regulations of the state control medical care

service. And is dedicated to being mutually beneficial with the state, citizens and legal entities fair respectful for clients, equitable, and accessible.

This chapter describes the comparison between the official statistical information on medical care service and the structural and operational standard of health care facilities. The Mongolian health system has three service delivery levels, and medical care service policy is dedicated to being equitable, accessible, and qualified to everyone.

Family health centres, sound and village health centres, inter-sound hospitals, clinics, maternity hospitals, public health centres, general hospitals, sanatoriums, ambulances service centres, regional diagnostic and treatment centres (RDTCs), central hospitals and specialized medical centres are currently serving a medical care services.

In 2019, a total of 4 459 health facilities were operating and delivering health care services around the country, including 12 specialized hospitals, 5 RDTCs, 16 aimag general hospitals, 13 district general hospitals and public health centres (PHCs), 6 rural general hospitals, 209 family health centres, 321 sound health centres, 237 private hospitals and 1 444 private clinics.

Table 4. 1 Number of health institutions, 2019

Health institutions	Aimag	Ulaanbaatar	Total
Family health center	78	131	209
Village health center	1	5	6
A grade	54		54
Soum health center	120		120
B grade	147		147
Rural general hospital	6		6
Aimag general hospital	16		16
District general hospital	0	4	4
District public health center	0	9	9
Regional diagnostic and treatment centres	5		5
Тусгай мэргэжлийн төв	9	3	12
Specialized hospitals	0	12	12
Maternal hospital	0	3	3
Emergency care center	0	5	5
Clinic /private/	408	1036	1444
Hospital /private/	109	128	237
Sanatorium	50	59	109
Pharmaceutical Supply Chain	79	277	356
Drug factory	0	40	40
Pharmacy	591	950	1541
Special hospital	17	5	22
Others	80	22	102
<b>Total</b>	<b>1770</b>	<b>2689</b>	<b>4459</b>

In 2019, there were 25 661 hospital beds available for use across the nationwide, of those accounted for 75.8 percent were in publicly-owned hospitals and 24.2 percent were in the private sector, all of the hospital beds in Mongolia. Between 2010 and 2019, the number of hospital beds in Mongolia increased by 43 % or 12.9 per 10 000 pop.

Figure 4. 1 Number of hospital beds, 2010-2019

The number of hospital beds in the population reveals that there were, on average, 80 per 10 000 inhabitants nationwide, in 2019. Almost three-quarters of 30% of these were for curative care, while the largest share of the remainder was 14% beds for child care, followed by 10.3% beds for surgery care and beds for traumatology.

Figure 4. 2 Number of hospital beds per 10 000 population, by function of care, 2010-2019

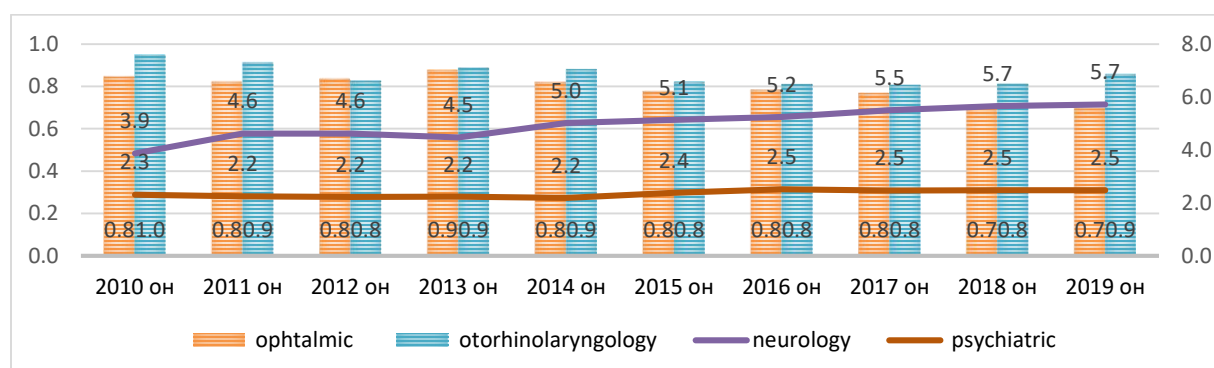

Figure 4. 3 Number of hospital beds per 10 000 population, by function of care, 2010-2019

The occupancy rate of hospital beds was in 77.2 % and length of stay was 7.0, in 2019. A higher rate was recorded in Khovd aimag (89.5%), the lowest occupancy rates were recorded in Umnugovi amag (44.9%)

Figure 4. 4 The occupancy rate of hospital beds, by aimags, 2019

Figure 4. 5 Number of hospital beds, per 10 000 population, 2010-2019

## 4.1. FAMILY HEALTH CARE

Family health centres (FHCs) are private organizations providing health services to urban and settled population by contract with the Government.

The PHC service is free of charge to all citizens and is financed from the general government budget revenue, as assured by the Health Act.

The PHC facilities (family and soum health centres) in Mongolia provide key health services to the population in their designated catchment areas. They provide eight types of services, including immunization, maternity care, and home visits for children aged under 5 years. Due to Mongolia's harsh climate, respiratory infections are widespread in winter and spring, adding to the workload of PHC providers.

More specifically, the FHCs provide basic health services to their catchment area populations, including outpatient visits, prevention check-ups, some laboratory tests, home visits and vaccinations.

Within the framework of the Second Health Sector Development Project funded by the Asian Development Bank (ADB), family practices were established according to planned phases in both Ulaanbaatar city and aimag centres. The family medicine system has been functioning since 2002 throughout the country.

As of 2019, 209 FHCs were operating in the country, out of them 131 FHCs providing health care services for 1444.6 thousand people in Ulaanbaatar city and 78 FHCs providing health care services in 21 aimags for 702.7 thousand people.

*Figure 4. 6 Number of Family health centers, 2010-2019*

In 2019, there were 54 687 healthcare employees, of which 2832 were employed in PHC facilities. Of the FHC total healthcare employees, 35.8% are physicians, 33.1 % are nurses and 4.1% are public health professionals, respectively.

Mongolia's ratio of medical doctors to nurses is 1:1.1 nationally and 1:0.9 in the PHC system much lower than the international averages. There are more doctors and nurses in urban settings than in rural Mongolia.

Total of 2 832 health professionals were working in 209 FHCs, including 1015 physicians and 937 nurses. However, the Structural and Performance Standards of FHCs are specified that one family doctor per 1800-2000 population. In fact, country average one family doctor served for 2 136

population in 2019. The number of people per one physician was met the standards in Bayan-Ulgii, Bayankhongor, Govisumber, Govi-Altai, Dornod, Zavkhan, Uvurkhangai, Umnugovi, Tuv and Khovd aimags, but for other aimags the ratio was higher than the given standard.

Figure 4. 7 Number of physicians of FHCs, 2010-2019

Figure 4. 8 Number of nurses of FHCs, 2010-2019

In 2019, an average of 5.6 million medical examinations was done at the FHCs and in average one person had 2.7 visits to FHC a year for receiving health care services.

Figure 4. 9 Number of outpatient visits performed by the FHCs, 2010-2019

Out of total outpatient visits, 42.9% were preventive medical check-ups, reaching 43.0% in Ulaanbaatar city and 39.2% in aimag FHCs. In 2019, the number of preventive medical check-ups were increased by 1.1% compared to the previous year. The Structural and Performance Standards for FHCs is specified that active visits to households should not be lower than 30%, but it stayed 25.8%, it was decreased by 1.6% compared to the previous year.

Figure 4. 10 Number of outpatient of FHCs /thousand/

As review, the following number of medical examinations was done at the family health centers of Ulaanbaatar; 3.0 million in 2005, 3.9 million in 2007 and 3.9 million in 2019, respectively. An average number of visits performed by one family doctor per year were 6083 in Ulaanbaatar city and 5 226 in provincial level centres.

Figure 4. 11 Percentage of early antenatal care, 2010-2019

## 4.2 SOUM HEALTH CENTERS MEDICAL CARE SERVICES

Soum health centres (SHC) and village health centres (VHC) provide health care services by modern and traditional medicine to their catchment population. Depending on the number of residents and a soum bag's geographical location, medical units could operate.

According to the 2019 Order A/540 of the Minister of Health, soum health centres are classified into three categories: A, B, and C, depending on their distance from the aimag centre, population size, and travel time the aimag centre.

In Mongolia, 7825 health workers work at the 321 sum health centres, including 54 A grade soum health centres, 120 B grade soum health centres, 147 B grade soum health centres, and the responsibility to provide primary health care services.

22.9 per cent work in grade A soum health centres, 34.3 per cent in grade B soum health centres, 40.5 per cent in category C soum health centres, and 2.3 per cent in village health centres.

As of 2019, of the SHCenters 1072 or 35.8% are physicians, 1850 or 23.6 % are nurses, and 4.1% are public health professionals. As of 2019, there are 1,072 or 12.7 per cent are physicians, 1 850 nurses (23.6 per cent), 1025 feldshers (13.1 per cent), 351 midwives (4.5 per cent), and 151 pharmacists (1.9 per cent), of the total employees.

Figure 4. 12 Number of physicians and nurses of SHC's, 2010-2019

As of 2019, 15.6% of all hospital beds were accounted for SHC hospitals, and it has increased by 369 beds or 10.2% compared to 2010. Total number of inpatients in SHC and inter-soum hospitals was 114.6 thousand people in 2019. The number of inpatients in SHC and in inter-soum hospitals has respectively increased by 21.8 thousand, compared to 2010.

Figure 4. 13 Indicators of inpatient care, 2010-2019

Currently, healthcare service delivery is based on home visits to families with children aged 0-5 years old, pregnant women, the elderly, and disabled people mandated by the Health Ministerial order. Similarly, as mandated by the Health Ministerial order number A/147, mobile health services among children and adults are conducted once a year by the primary health care centres in collaboration with specialists from secondary level hospitals.

Figure 4. 14 Percentage of early antenatal care, 2010-2019

As of 2019, there visit 2.2 thousand outpatients at the SHC's, which the average number of visits per capita to 2.3. The percentage of preventive medical check-ups was 39.5% and, home visits were 13.2% of total outpatients, which increased by 0.9 preventive medical check-ups, compared to the previous year.

Figure 4. 15 Number of outpatients of SHC's, 2010-2019

In 2019, there were three maternal deaths registered in SHCs and inter-soum hospitals, and the mortality rate was 81.5 deaths per 100 000 live births, which high by 21.8 than an average last decade. The infant mortality rate was 52.2 per 1000 live births in SHC. And the infant mortality rate has increased by 7.4 and 12.1, compared to the previous year and an average last decade.

Figure 4. 16 The maternal and infant mortality rate, 2010-2019

### 4.3. GENERAL HOSPITALS AND PUBLIC HEALTH CENTERS MEDICAL CARE SERVICES

The Law on Health of Mongolia has described that General hospitals set up as a minimum of seven departments, including internal medicine, paediatrics, obstetrics and gynaecology, general surgery, dentistry, neurology, and infectious diseases, intending to provide the medical services in terms of inpatient and outpatient level.

Based on the location and needs of a population, general hospitals could have an additional outpatient unit. According to government policy and laws, public health centres provide public health services to support health-promoting environments at the aimag and district level.

In 2019, 5 199 medical professionals, including 1 206 physicians, 1 849 nurses, worked in 16 aimag general hospitals. In total, 3 481 medical professionals, including 895 physicians and 988 nurses, worked in district general hospitals and public health centres of the capital city Ulaanbaatar.

Figure 4. 17 Number of physicians of aimag and district general hospitals, 2010-2019

Figure 4. 18 Number of nurses of aimag and district general hospitals, 2010-2019

In 2019, the number of outpatients at the aimag general hospital level was 1.8 million. The district general hospital level was 2.4 million, which accounted for 10% and 14.2%, aimag and district public hospitals, of total outpatients.

The majority of 61.5% are the patients who come for treatment to ambulatory care, and 8.3% were a medical examination for control at the aimag general hospitals. The majority of 46.9% are the patients who come for treatment to ambulatory care, and 13.2% were a medical examination for control at the aimag general hospitals.

Figure 4. 19 Number of outpatients, 2010-2019

As of 2019, the percentage of preventive medical check-ups at the aimag general hospital level is 30.1, which is 3.8 percent lower than the average of the last ten years. At the district general hospital level, it is 39.9, which is 1.1 percent lower.

Figure 4. 20 The percentage of preventive medical check-ups, 2010-2019

In 2019, the maternal death reported 3 cases or 13.9 per 100 000 live births at aimag general hospital level, which decreased by 3.6 compared to the previous year and 17.6 compared to an average of the last decade.

In 2019, the infant mortality rate was 8.5 at the aimag general hospital, an increase of 0.3 compared to the previous year and 3.6 lower than the last decade's average.

Figure 4. 21 The maternal and infant mortality rate, 2010-2019

In 2019, there were 3 714 hospital beds in aimag general hospitals, which accounted for 14.7% of all hospital beds, and the number of hospital beds has increased by 525, compared to 2010.

In 2019, the number of inpatients at the aimag general hospitals level was 142.8 thousand, accounting for 15.4% of all inpatients. In 2019, the occupation rate was 83.0 per cent, which is 5.8 per cent higher than the national average and increased by 16 per cent compared to 2010. The average length of stay of hospital beds is 7.1, a decrease of 0.8 compared to 2010.

Figure 4. 22 Inpatient care indicators of aimag general hospitals, 2010-2019

In 2019, there were 2569 hospital beds in district general hospitals, which accounted for 10.1% of all hospital beds, and the number of hospital beds has increased by 1216, compared to 2010.

In 2019, the number of inpatients at the district general hospitals level was 129.9 thousand, accounting for 13.9% of all inpatients. In 2019, the occupation rate was 99.6 per cent, 22.4 per cent higher than the national average. The average length of stay of hospital beds is 6.5, a decrease of 1.2 compared to 2010.

Figure 4. 23 Inpatient care of district general hospitals, 2010-2019

In 2019, the percentage of deaths occurring within 24 hours of admission was 32.0% in aimag general hospitals which increased by 1.7% compared to the previous year. The number was lower than the average of the last decade by 0.6%.

It was 25.6, in district general hospitals, which decreased 1.3% or 2.6% compared to the previous year and the average of the last decade.

Figure 4. 24 The percentage of deaths occurring within 24 hours of admission, 2010-2019

## 4.4 REGIONAL DIAGNOSTIC AND TREATMENT CENTRES MEDICAL CARE SERVICES

The regional diagnostic and treatment centres (RDTCs) are health organizations providing medical care services to the given region's population to provide the professional, methodological advice to health institutions and conduct some training activities.

As of 2019, aimag general hospitals in Orkhon, Dornod, Uvurkhangai, Khovd and Umnugovi aimags were functioning under the status of RDTCs at the national level. A total of 2 090 medical personnel including 522 physicians, 747 nurses and 264 technical education and professional medical staff, worked at RDTCs.

Figure 4. 25 Human Resource indicators for Regional Diagnostic and Treatment Centers, 2019

In 2019, there were 1692 hospital beds in RDTCs, which accounted for 6.6% of all hospital beds. The number of hospital beds has increased by 563, compared to 2010.

In 2019, admitted a total 59.0 thousand inpatient to RDTCs, which accounted for 6.3% of the total inpatients. In 2019, the occupation rate was 74.8 per cent, which is 2.4 per cent lower than the national average. The average length of stay of hospital beds is 6.5, a decrease of 1.2 compared to 2010. The average length of stay at RDTC was 7.1 in 2019, which decreased by 0.7, compared to 2010.

Figure 4. 26 Inpatient care indicators of RTDCs, 2010-2019

Percentage of deaths within 24 hours of admission was 27.7 per cent in 2019, which decreased by 3.2% compared to the previous year and lower by 1.6, an average of the last decade.

Figure 4. 27 Percentage of deaths occurring within 24 hours of admission of RTDCs, 2010-2019

In 2019, there visit 678.5 thousand outpatients at the RDGC's, which increased by 224.0 thousand compared to 2010. The preventive check-ups accounted for 25.1 per cent of all outpatients, and 17.0 per cent of outpatients came through referrals.

Figure 4. 28 Number of outpatients /thousand/, RDTC's, 2010-2019

Figure 4. 29 Maternal and Infant mortality rate of RDTC's 2010-2019

In 2019, there were two maternal deaths registered in RDTCs, and the mortality rate was 20.2 deaths per 100 000 live births. As of 2019, the infant mortality rate was 8.4 per 1000 live births. And the infant mortality rate has increased by 1.0 compared to the previous year and decreased by 3.5, compared to the average last decade.

#### 4.5. CENTRAL HOSPITALS AND SPECIALIZED CENTRES MEDICAL CARE SERVICES

Central hospitals are health organizations to provide specialized professional medical inpatient and outpatient services at the national level and carry out research and training activities to give professional consultations and methodological recommendations to other health organizations.

Specialized centres are health organizations to provide specialized professional medical inpatient and outpatient services at the national level and carry out a reference, training, research and scientific activities to give professional consultations and methodological recommendations to other health organizations.

As of 2019, a total of 6 701 health professionals were worked in Central hospitals and specialized centres, including 1 380 medical doctors, 2 158 nurses and 625 professional and technical education medical staffs, respectively.

*Figure 4. 30 Number of physician and nurses of Central hospitals and specialized centers, 2010-2019*

15.5% of all hospital beds and 16.9% of inpatients were accounted for central hospitals and specialized centres.

In 2019, it admitted a total 157.9 thousand inpatient to central hospitals and specialized centres, which increased by 12.9 thousand, compared to the average last decade and 22.6 thousand, compared to the previous year. In 2019, the occupation rate was 98.2 per cent, which is 21.0 per cent higher than the national average. The hospital beds' average length of stay was 10.0 in 2010, which decreased to 8.2 in 2019.

Figure 4. 31 Inpatient care indicators, 2010-2019

Furthermore, the percentage of total in-hospital deaths occurring within 24 hours after admission decreased from 23.5% in 2010 to 19.4% in 2019, making the average over the last ten years is 21.6%.

Figure 4. 32 Percentage of deaths occurring within 24 hours of admission, 2010-2019

In 2019, the number of outpatients in central hospitals and specialized centres was 1467.3 thousand, which accounted for 7.8 per cent of the total medical outpatients. Compared to 2010, it has increased by 279.0 thousand outpatients. Preventive check-ups accounted for 6.4 per cent of all outpatients, and 20.0 per cent outpatients came from the countryside with referrals.

Figure 4. 33 Number of outpatients, 2010-2019

Within the last 10 years, an average of 145.0 thousand patients hospitalized in central hospitals and specialized centers, out of them 23.0% patients were referred from countryside. Compared to 2010, the total number of inpatients has decreased by 1.9% in 2019.

## 4.6. PRIVATE HOSPITALS HEALTH CARE SERVICES

As of 2019, 41.3 per cent are pharmacies, 38.7 per cent are clinics, 9.6 per cent are Pharmaceutical Supply Chain, 6.4 per cent are private hospitals, 2.9 per cent are resort care, and 1.1 per cent are drug factory, of all private health care institutions nationwide.

The private health institutions are working 18.7 thousand employees, of which 31.6 per cent work in private clinics, 29.4 per cent in hospitals, 26.8 per cent in pharmacies, 9.3 per cent in Sanatorium, and 2.9 per cent in Pharmaceutical Supply Chain and drug factory.

As of 2019, 237 private hospitals and 1 444 private clinics provide health care services to the population. In 2010, the number of private hospitals increased from 166 to 71 in 2019, and the number of private clinics increased by 497. A total of private hospitals, there was 32.3 per cent in rural areas and 67.7 per cent in Ulaanbaatar city.

Figure 4. 35 Number of private hospitals and clinics, 2010-2019

The number of private hospital beds was 2 527 in 2010, and the number has increased to 6205 beds in 2019, which accounted for 24.2% of all hospital beds in the country.

Since 2005, the establishment of new private hospitals, especially with hospital beds has been restricting when types of services provided by these private hospitals were similar to services provided by state hospitals. However, if the types of services they deliver are complementary to existing public services Health policy has been focusing on expanding activities of these private hospitals and supporting the establishment of diversifications.

Figure 4. 36 Number of hospital beds of private hospitals, 2010-2019

As of 2019, 20.0 per cent of all inpatients are in private hospitals.

In 2019, the number of inpatients was 181.9 thousand private hospitals, which is increased by 45 thousand, from the average of the last ten years, and 95 thousand, compared to 2010.

In 2019, the occupation rate was 61.5 per cent, which is 16.0 per cent lower than the national average. In 2010, the hospital beds' average length of stay was 7.9, which decreased to 6.9 in 2019. Hospital bed turnover rate is 29.3, which is 7.0 lower than the national average.

Figure 4. 37 The number of inpatients of private hospitals, 2010-2019

As of 2019, the leading causes of morbidity in private hospitals, as follows:

- 22.0 per cent are diseases of the cardiovascular or circulatory system.
- 19.7 per cent are diseases of the genitourinary system.
- 12.5 per cent are diseases of the digestive system.
- 11.8 per cent are diseases of the nervous system.
- 9.9 per cent are diseases of the musculoskeletal system.
- 9.5 per cent are diseases of the respiratory system. It accounts for 85.4 per cent of all conditions.

The leading causes among hospitalized patients were as follows: among patients with diseases of the cardiovascular system, 54.4% had suffered from arterial hypertension, and 19.2% had ischemic heart diseases, of the genito-urinary course 62.4% had pyelonephritis and among patients with disorders of the digestive system 25.0% had liver problems.

Figure 4. 38 Leading causes of the inpatients, percentage, 2019

In 2019, in terms of hospital bed capacity, private hospitals as follows: with 5-8 beds accounted for 5.1 per cent, hospitals with 10-12 beds for 15.2 per cent, hospitals with 15 beds for 21.9 per cent, and private hospitals with up to 20 beds for 42.2 per cent.

Compared to 2011, the number of hospitals to 20 beds decreased by 31.5 per cent, the percentage of hospitals 20-25 beds increased by 14.2 per cent, hospitals with 30 beds by 3.7 per cent, hospitals with 40-50 beds by 9.0 per cent, and hospitals more than 50 beds by 4.5 per cent.

Table 4. 3 Bed capacity of private hospitals, selected years

In 2019, admitted all inpatients of private hospitals, which 46.8 per cent were to internal, 14.7 per cent to neurology, 10.0 per cent to traditional, 7.0 per cent to surgery, 6.4 per cent to gynaecology, and 5.2 per cent to paediatrics.

In 2019, the number of outpatients in the private hospital was 2794.3 million, which accounted for 15.8%, of total outpatients. Compared to 2010, which increased by 1757.0 million outpatients. The majority of 92.3% are the patients who come for treatment to ambulatory care.

Figure 4. 39 The number of outpatients, thousand pop, 2010-2019

## CHAPTER 5. HUMAN RESOURCES IN THE HEALTH SECTOR

As of 2019, a total of 54.0 thousand healthcare employees provide medical care services to a total of 3,200.0 thousand pop, in Mongolia. The total number of employees increased by 23.1 thousand or 37 per 10 000 pop, compared to 2020 and increased by 4.6 percent compared to the previous year. Out of total health personnel, 92.5% employed by the health sector and 7.7% of them represent health workers employed by other sectors.

The majority are women of the total health employees, and in 2019, the proportion of women increased by 1.7 percent compared to 2000.

Figure 5. 1 Health employees, 2000,2005,2009-2019.

As of 2019, the health employees were 171.4 per 10,000 pop, which increase of 37 or 5.9, compared to 2000 and the previous year, respectively. The number of employees per 10000 pop, is 36.8 higher than the national average in Ulaanbaatar and by 18.9-39.4 lower than the national average, in regions.

Looking by regions, the total number of employees is the highest or 152.5 in the western region, 140.5 in the central region, in the Khangai region 135.5 and the eastern region the lowest or 132.0. Looking by provisions as follows: the health employees were 190.6 per 10 000 population, in Gobi-Altai, which is higher than the national average, while Khuvsgul, Dornod, Khentii, and Sukhbaatar provisions have the lowest health employees per 10 000 population and which looks high are work-related burdens.

The proportion of women in the Western region is 75-81 percent, which is lower than the national average. The proportion of women have the highest Central and Khangai region of aimags. By age groups, there were 25.4% of age under 30 years, 29.1% of age 30-39 years, 23.3% of age 40-49 years, 12.3% of age 50-54 years, 6.2% of age 55-59 years and 3.7% of age above 60 years, respectively.

Figure 5. 2 The health employees, by age groups, 2019

Figure 5. 3 The health employees, per 10 000 population, by regions, 2019

There were physicians 11.7 thousand or 21.6 per cent of total healthcare employees, 12.7 thousand nurses /23.4 per cent/, 2.5 thousand pharmacists /4.6 per cent/, and 7.8 other medical professionals and technical education staff. As of 2019, there are 37.3 physicians, 40.4 nurses, 3.3 midwives and 7.9 pharmacists per 10,000 in Mongolia.

Compared to 2000, the number of physicians per 10,000 population increased by 9.6 and the number of nurses by 8.9. Compared to the previous year, the number of physicians and nurses increased by 1.9 and 1.3, respectively.

Physicians by profession: per 10 000 population dentists were 4.5, 3.5 internal medicine, and 3.3 traditional medicine.

Figure 5. 4 Physicians by profession, per 10 000 population, 2000,2005, 2009-2019.

Figure 5. 5 Physicians per 10 000 population, type of occupation, 2019

As of 2019, there are 709 paediatricians, 7.1 paediatricians per 10,000 children, 4.9 doctors per 10,000 women, or 795 obstetricians.

Figure 5. 6 The physicians and nurses, 2000, 2005, 2009-2019

Figure 5. 7 Health employees, per 10 000, selected occupation

35.9 thousand or 65.7 per cent are working in public health organization and 18.7 thousand 34.3 per cent in a private health organization, of the total health organization.

A total of 35.9 thousand employees of public health care organizations provide health care services to the population. Of these, 23.9 per cent work in soum health centres, 17.4 per cent in specialized hospitals, 14.5 per cent in aimag general hospitals, 9.7 per cent in district general hospitals and public health centres, and 7.9 per cent in family health centres.

Figure 5. 8 The employees of public health organizations, 2019

A total of 18.7 thousand employees provide health care services to the population in private health organizations, of which 31.6 per cent are in private clinics, 29.4 per cent in private hospitals, 26.8 per cent in pharmacies, 9.3 per cent in sanatoriums, and 2.9 per cent in Pharmaceutical Supply Chain and working in the drug factory, respectively.

Figure 5. 9 The employees of private health organizations, 2019

As of 2019, there are 11,788 medical doctors nationwide, and the majority of 77.0 per cent of all physicians are women. Of these, 9,406 physicians, of which 79.8 per cent work in primary and specialized professions. There are 951 traditional medicine and 1431 oral dentists. The national average number of physicians per 10,000 population is 37.0, which is 49.9 per 10 000 population or by 12.9 higher than the national average in Ulaanbaatar, 26.3 in the western region, 24.8 Khangai, 28.3 the Central region, and 24.3 in the Eastern region.

Figure 5. 10 Physicians per 10 000 population, by region, 2019

Figure 5. 11 Doctors of Traditional medicine and Dentists, per 10 000 population, by region, 2019

61.6 per cent of all doctors work in Ulaanbaatar and 38.4 per cent in aimags and rural areas. By age groups, there was 27.3 percentage under 30 years, 34.6 per cent are 30-39 years old, 16.5 per

cent are 40-49 years old, 9.2 per cent are 50-54 years old, 6.0 per cent are 55-59 years old, and 6.4 per cent are over 60 years old.

Figure 5. 12 Doctors, by age groups, 2019

As of 2019, an average population per physician was 271, and an average number of people per nurse was 250. The numbers have decreased by 12 and 6 persons, respectively as compared to the previous year.

The average number of population per a physician was 403 in the Khangai region as reported at the highest, and this number was 381 in the Western region, 412 in the Eastern region and 353 in the Central region.

In Ulaanbaatar city, the number of population per physician was 201 and the number of population per nurse was 214, respectively. In the Khangai region, the number of population per nurse was estimated at 304 which reported as the highest compared to other regions.

Looking by geographical distribution (location) of health professionals, there were 49.9 doctors and 46.8 nurses per 10 000 population in Ulaanbaatar city, while 24.7 doctors and 33.4 nurses per 10 000 people were in rural areas. This data indicates that a high density of doctors in Ulaanbaatar city. Significantly, the number of surgeons were 2.2 times, trauma and orthopaedic specialists were 2.3 times, and radiology and lab specialists were 3.2-3.8 times higher in Ulaanbaatar city than in other rural areas.

Figure 5. 13 The physicians per 10 000 population, by region, 2016-2019

Figure 5. 14 The nurses per 10 000 population, by region, 2016-2019

As of 2018, 2509 pharmacists were working nationwide, of which 4.3 and 12.1 per 10 000 population were in rural areas and Ulaanbaatar city, respectively /the country average is 7.9/.

The average population per pharmacist was 2310 in rural areas and was 828 in Ulaanbaatar city /the country average is 1271/.

In 2019, 467 medical doctors completed postgraduate training general practitioners training, 168 medical doctors and 558 nurses and other medical professionals attended specialized qualification training and 185 physicians and 126 nurses, and other medical professionals have completed advanced professional training.

In 2019, a total of 4734 doctors, nurses and other medical professionals had completed the postgraduate training financed by the state budget. The number of medical professionals who participated in different types of training as follows: 428 doctors and 275 nurses and other medical professionals in general practitioners, specialized qualifications and 44 doctors and 76 nurses and other medical professionals advanced professional training, 241 in foreign practice and 3077 in distance learning training, respectively.

## CHAPTER 6 COMMUNICABLE DISEASES

Resolution No. 11 of the Government of Mongolia in 2017 to reduce the spread of infectious diseases by increasing the participation of other sectors in strengthening the capacity for flexible, high-quality, inclusive and rapid response to infectious diseases, prevention and response to outbreaks, and ensuring the financial sustainability of program implementation The National Program on "Prevention and Control of Communicable Diseases" was approved for this purpose

According to the National Program's target on "Prevention and Control of Communicable Diseases", the goal is to reduce the number of registered TB cases (per 10,000 population) to 14.4 by 2020, while 11.2, in 2019. The incidence of acute viral hepatitis goal to reduce 8 per 10,000 population by 2020, and it was 0.5 in 2019.

The goal of the incidence of acute viral hepatitis B is 1.3 in 2020, while there was 0.7, in 2019. The goal has reached. The goal for dysentery (per 10,000 population) is 7.0 in 2020, and it was 16.8 in 2019. An average last decade, a total of 45,902 cases with 31 different types of communicable diseases were reported nationwide, which is an average last decade is 157.2 per 10,000 population.

Figure 6. 1 The incidence of communicable diseases, 2010-2019

Compared to aimags, cities, and regions, infectious diseases are higher by 25-44 cases per 10,000 in Ulaanbaatar and Eastern areas.

Among the eastern aimags, Dornod and Sukhbaatar aimags had higher than the national average in 2019. Khentii aimag has higher than the national average in 2010 and has been declining in recent years.

Figure 6. 2 The incidence of communicable diseases, by region, 2010-2019

An average last five years, the number of infectious diseases increased by 12.4 thousand (31.4%) compared to the previous five years, and the incidence of infectious diseases per 10,000 population increased by 19.8.

In 2015-2016, there was a significant measles outbreak in all aimags and the capital city, and 53.7 thousand suspected cases were registered.

In 2019, 45.2 thousand cases with 27 different types of infectious diseases were reported (142 per 10 000 population) at the national level, which increased by 9 points per 10 000 people compared to the previous year.

In 2019, it was looking by the structure of infectious diseases, which sexually transmitted infections accounted for 39.5 per cent of all infectious diseases, increasing by 1.2 points, respiratory infections by 7.6 points, blood-borne conditions by 0.1 zoonotic and intestinal illnesses by 0.1-9.1 points, compared to the previous year.

## 6.1 RESPIRATORY INFECTIONS

An average last decade, 17,750 cases or 157.2 per 10,000 population registered respiratory infections, at the national level. An average last decade, measles and smallpox account for the majority of respiratory infections.

The incidence of smallpox and rubella increases year by year, and mumps is declining, from respiratory infections.

The incidence of TB, which accounts for 23 per cent of respiratory infections and 8 per cent of all infectious diseases, has not decreased significantly. Every year, the number of people with a disability rate due to TB increases, including more than 70 per cent.

Each year, an average of 400 children are diagnosed with new TB, accounting for 10% of all TB cases. During the last five years, the highest number of children was registered in 2016 or 516, it decreased to 424 in 2017 and 293 in 2018 and increased again to 382, in 2019.

Figure 6. 3 The respiratory infections, 2010-2019

As of 2019, 15,638 cases of respiratory infections were registered nationwide, accounting for 36.8% of all communicable diseases. Respiratory infections increased by 2516 cases or 19.2%, compared to the previous year. Nationwide, 6 deaths due to respiratory infections were reported, including meningococcal disease (5) and smallpox (1).

Figure 6. 4 The respiratory infections, per 10 000 population, by regions, 2010-2019

## 6.2 Varicella

Nationwide, a total of 5,736 cases or 19.6 per 10,000 population of varicella reported an average the last decade. In 2010, 1268 cases and 2019, 10,652 cases were registered, which is increased by 9384, compared to 2010 and 4916 topics, compared to an average of the last decade

Figure 6. 5 The varicella, 2010-2019

At the national level, 10 652 cases or 33.4 per 10 000 population of varicella were registered. The disease incidence accounted for 23.5% of all communicable diseases and 68% of respiratory infections.

In Ulaanbaatar were registered 60.9% and in aimags 39.1%, of all cases. Compared to the previous year, which increased by 0.1-34.4 cases in Sukhbaatar, Darkhan-Uul, Dornogovi, Govisumber, Khuvsgul, Khovd, Dundgovi, Orkhon, Selenge, Tuv and Bulgan aimags. Dornod (61.1), Sukhbaatar (58.9), Darkhan-Uul (57.8), Khuvsgul (42.3), Dornogovi (41.6), Govisumber (40.5), Dundgovi (37.7), Khovd (33.5) aimags and Ulaanbaatar (43.6) are higher by 0.6-28.2 cases, compared the national average.

### 6.3 Meningococcal infections

According to the dynamics of meningococcal infections registered at the national level, there were several outbreaks of meningococcal infections occurred in the country in 1974 and 1994, the case rate was 14-19 per 10 000 population. Since 1995, the incidence rate has decreased steadily, but it has increased slightly in 2007, giving a rate of 0.6 per 10 000 population.

In 2019, a total of 20 cases or 0.1 per 10 000 population of meningococcal infections were registered. The rate increased by 8 case as compared to the previous year and 8 cases compared to an average last 5 years.

### 6.4 Mumps

Nationwide, a total of 1,754 cases or 6.0 per 10,000 population of mumps have been reported in the average last ten years. Outbreaks were reported in 2012 and 2013, while in 2019, 125 cases were reported, which decreased by 1,629 cases, compared to the average last ten years.

Figure 6. 6 The mumps, 2010-2019

At the national level, 125 cases or 0.4 per 10 000 population of mumps were registered. The rate decreased by 0.6 or 0.4 per 10 000 people, compared to the last year and an average five years. Out of all reported cases, accounting for 44.8% were in Ulaanbaatar city and 55.2% were in rural, respectively.

Compared to 2018, the incidence rate of mumps per 10 000 population increased by 0.2-0.3 in the following aimags: Dundgovi, Khentii and. However, the rate has decreased in other aimags. The disease's incidence was reported among all age groups, hence 67.2% of all cases registered in children 1-9. A total of mumps were 41.6 per cent are school children, 30.4 per cent in kindergartens, 17.6 per cent at homes, respectively.

## 6.5 Tuberculosis

Mongolia is one of the countries with the highest TB incidence, of the 37 countries in the WHO Western Pacific region. According to health statistics for the last five years, TB accounts for 9.8 per cent of all communicable diseases registered in the country, and more than 4,000 new TB cases diagnosed each year.

Although Mongolia, like many other countries, has used the strategy of directly observed treatment, short courses (DOTS) since 1996, which has impacted the steady detection of new cases and a tendency to reduce tuberculosis cases since 2007.

Figure 6. 7 The incidence of tuberculosis, 2010-2019

It is declared that reduce to 144 the rate of tuberculosis per 100 000 populations, by 2020 in the “Concepts of Mongolian Sustainable Development-2030”.

The incidence rate of tuberculosis (TB) in 1996 was 146.0 per 100 000 population, while in 2006 it reached 186, increased by 1.3 times. However, it has continuously decreased since 2007 reached 168 per 100 000 population. The incidence of TB in 2011 was 148.7, in 2019 was 114 per 100 000 population, respectively.

Figure 6. 8 The incidence of tuberculosis, per 10 000 population, by region, 2010-2019

In 2019, the mortality rate of tuberculosis was 2.8 per 100 000 population, and it was two times lower compared to the mortality rate in 1996.

In 2019, total 3624 new cases or 11.4 per 10 000 population of tuberculosis were registered, which accounted for 8.0% of all communicable diseases, which increased by 126, compared to the previous year.

In 2019, a total of 3624 new TB cases were registered, of which 2073 (57.2%) reported in Ulaanbaatar, 1515 (41.8%) in aimags and 36 (1.0%) in prisons, compared to the previous year, which increased by 48 and 86, in Ulaanbaatar and aimags, while in prisons it decreased by 8 cases.

In 2019, among newly registered tuberculosis, pulmonary tuberculosis was 61.6% /2 234 cases/, increased by 130 cases and extrapulmonary tuberculosis was 39.4% /1 390 cases/, decreased by 4 cases last year. Compared to 2018, rates of pulmonary tuberculosis increased by 1.5%, while extrapulmonary tuberculosis rates decreased by 1.4%.

Looking at the registered new cases by age group, the incidence rates were high among people 15-24 old, 25-34 and above 65 years old.

## 6.6 Tuberculosis incidence among children

In 2019, 382 new tuberculosis cases were reported in children aged 0-14 years old, accounting for 10.5% of all cases, an increase of 89 cases or 2.1 per cent from the previous year.

Figure 6. 9 The incidence of tuberculosis in children, 2012-2019

A total of 67 TB deaths reported with TB treatment patients, increased 8 cases than the previous year. Two children died, accounting for 2.9% of all deaths, regarding type: 59 (88%) deaths due to pulmonary TB and 8 (12%) deaths due to extrapulmonary TB.

## 6.7 Disability due to tb

Every year, the number of people with a disability rate due to TB increases, including more than 70 per cent. In 2019, 2,912 new patients were reported with a disability rate, of which 2,896 (99.4%) received more than 70% and 16 (0.6%) received 50-69% benefits.

## 6.7 The treatment success rate

The treatment success rate for people with pulmonary TB on treatment in 2019 was 85.3%, 91.9% in the countryside and 80.5% in Ulaanbaatar.

Figure 6. 10 Treatment success rate of pulmonary TB, 2012-2019

In 2019, 382 new cases of tuberculosis reported in children aged 0-14 years old. There were 73 pulmonary tuberculosis cases (22.4%) and 253 cases of extrapulmonary tuberculosis (77.6%). For the sever form of tuberculosis in children, 4 cases of acute military tuberculosis and 1 case of tuberculosis meningitis reported, and acute military tuberculosis decreased by 1 case and tuberculosis meningitis by 2 cases, respectively as compared to the previous year.

## 6.10 Intestinal infectious diseases

Nationwide, a total of 9,609 cases or 32.9 per 10,000 population of intestinal infectious diseases reported an average last ten years. The majority of dysentery, viral hepatitis A, and hand, foot, and mouth disease, of all intestinal infections, on average last ten years. In 2019, the number of registered cases decreased by 436 cases than the average of the last ten years.

Figure 6. 11 The incidence of infectious diseases, 2010-2019

In 2019, a total of 9173 cases with six different types of intestinal infectious diseases including shigellosis, bacterial foodborne intoxications infections, salmonella, diarrhoea and gastroenteritis of presumed, hand-foot-mouth disease and acute hepatitis A were registered, at the national level. The intestinal infectious diseases accounted for 20.3% of all communicable diseases and decreased by 3.6 per 10 000 population, compared to the previous year.

The reported intestinal infectious diseases were as follows: shigellosis (59.3%), bacterial foodborne intoxications (9.0), salmonella (3.8%), diarrhoea and gastroenteritis of presumed (2.6%), hand-foot-mouth disease (23.4%) and acute hepatitis A (1.9%).

Compared to the previous year of the intestinal infections which has increased in salmonella, bacterial foodborne intoxications, diarrhea and gastroenteritis of presumed, and which decreased shigellosis and hand-foot-mouth disease.

Table 6. 2 The number of intestinal infectious diseases, per 10 000 population

## 6.11 Shigellosis

In 2019, 5,438 cases (16.8 per 10,000 pop) of shigellosis were registered, which accounted for 12.0 per cent, of all infectious diseases. Compared to 2018, the incidence decreased by 2.9 per 10,000 and increased by 3 cases compared to an average last 5-year.

Figure 6. 12 The incidence of shigellosis, 2010-2019

According to the dynamics an average last ten years of shigellosis, the incidence was highest in 2018 and lowest in 2013. The incidence has increased since 2014 and expected to increase in the future.

As of 2019, the incidence was reported among all age groups, while 75.8 per cent were among 0-9-year-olds, of all cases, of which the highest or 56 per cent for 0-4 year old. The incidence of shigellosis reported for the year, with an increase from April onwards and a peak in August.

Figure 6. 13 The incidence of shigellosis, per 10 000 population, 2017-2019

Nationwide, 4,532 (83.3%) of patients with shigellosis are diagnosed of went to doctor on their own, 22 (0.4%) for physical examination , 846 (15.6%) for emergency medical examination, 3 (0.06%) for others, and 3 (0.06%) for contacts. And 32 (0.6%) were detected by active surveillance, respectively.

The source of the infections is 615 (11.3%) from a person who infected with shigella, 8 (0.1%) from who has shigella infection, and 4815 (88.6%) from unknown sources. 96 (1.8%) transmitted by water, 39 (0.7%) by food, 378 (6.9%) by household contact, 4924 (90.5%) by unknown means, and 1 (0.1%) by other means.

## 6.12 OTHER BACTERIAL FOODBORNE INTOXICATIONS

An average the last ten years, 472 /1.6 per 10 000 population/ of other bacterial foodborne intoxications were registered. The number of foodborne outbreaks has increased in recent years, with eight epidemics in 2015 and 19 in 2019.

In 2019, a total of 830 cases or 2.6 per 10 000 population of other bacterial foodborne intoxications were registered at the national level, accounted for 3.8% of all intestinal infectious diseases. Of the total number of other bacterial foodborne intoxications, 681 cases (82%) were registered in Ulaanbaatar city and the rate was 4.6 per 10 000 population.

In 2019, the incidence of these infections increased by 276 cases in Ulaanbaatar city, compared to the previous year. For the past decade, the highest rates of other bacterial foodborne intoxications were reported in 2008 and 2012.

Figure 6. 14 The incidence of other bacterial foodborne intoxications, 2009-2019

In 2019, the incidence rate of bacterial foodborne intoxication per 10 000 population was 15.9 in Umnugovi and 4.6 in Ulaanbaatar city.

Looking by monthly, most cases of other bacterial foodborne intoxications occurred in February, May and August. By sex distribution, 54.4% of cases were females and 48.6% were males.

Looking by social status were diagnosed with food poisoning as follows: school children were 266 (39.1 per cent), 102 employed (14.9 per cent), 79 employees (11.6 per cent), 48 at home (7.1 per cent), 45 unemployed (6.6 per cent), and others 45 (6.6 per cent), students 44 (6.4 per cent), kindergartens 37 (5.4 per cent), and retired 15 (2.2 per cent), respectively.

The number of other bacterial foodborne intoxications registered in the last five years is monthly: September and October in 2015, May in 2016, June-December in 2018, May, August in 2019, outbreaks reported and the number of cases increased.

Figure 6. 15 The incidence of other bacterial foodborne intoxications, last five years

The number of cases registered in 2019 by month: The number of cases reported in February, May, July, and August increased sharply compared to the number of cases registered in other months due to the number of outbreaks.

Of the total outbreaks, 28.6% registered in children's institutions, 28.6% in public canteens, and 14.3% in fast-food restaurants and households. 19.1% were hospitalized, of all patients.

Compared to other bacterial foodborne intoxications cases registered in Ulaanbaatar over the last ten years, the incidence per 10,000 population was highest in 2012 and 2019.

Figure 6. 16 The incidence of other bacterial foodborne intoxications, in Ulaanbaatar

In 2019, 82.1 per cent of food poisoning cases registered nationwide were registered in Ulaanbaatar.

In 2019, a total of 681 cases or 4.6 per 10 000 population of food poisoning was registered in Ulaanbaatar, which increases of 353 cases or 2.3 per 10,000 population compared to the previous year. An increase of 309 cases or 2.0 per 10,000 population compared to the average of the last five years.

### 6.13 VIRAL HEPATITIS

In 2019, a total of 527 new cases or 1.7 per 10 000 population of viral hepatitis were registered at the national level, which accounts for 1.7% of all communicable diseases. The incidence decreased by 52 cases or 0.2 /per 10 000 pop/ as compared to the previous year.

Figure 6. 17 The incidence of viral hepatitis, 2010-2019

Viral hepatitis registered nationwide in the last ten years was the highest in 2011 at 54.8 per 10,000 population, and since 2012, the incidence has been steadily declining. Nationally, the incidence of viral hepatitis for over the last decade it is seen that the highest rate (peaks) was observed in December 2007, 2010 and in November 2011. Since 2012, the incidence rate has decreased steadily

In 2019, the incidence rates of viral hepatitis were higher than the country average in the Bayan-Ulgii 15.0 per 10 000 population.

Out of all viral infections, 33.0% was viral hepatitis A, 41.6% was viral hepatitis B, 13.5% was viral hepatitis C and 12.0% was other viral hepatitis.

Figure 6. 18 Viral hepatitis, by type, 2019

### 6.14 Viral hepatitis A

In 2019, a total of 174 cases or 0.5 per 10 000 population of acute viral hepatitis A were registered at the national level, and the rate has increased by 0.4 per 10 000 population as compared to the previous year.

Figure 6. 19 The incidence of viral hepatitis A, 2010-2019

Last ten years, the highest number of viral hepatitis A registered in 2011, 49 or per 10000 population. In 2019 the incidence of viral hepatitis A increased by 148 cases or 0.4 per 10 000 population compared to the previous year.

An outbreak of hepatitis A virus has occurred in Bayan-Ulgii aimag, for that reason to number of cases has increased nationwide, compared to the last year.

Nationally, the incidence of viral hepatitis for over the last decade it is seen that the highest rate (peaks) was observed in December 2007, 2010 and in November 2011. Since 2012, the incidence rate has decreased steadily

In 2019, the incidence rates of acute viral hepatitis A were higher than the country average in the Bayan-Ulgii aimag. No cases of hepatitis A virus have been reported in 15 aimags. (Bulgan, Gobi-Altai, Govisumber, Dornogovi, Dornod, Dundgovi, Orkhon, Uvurkhangai, Umnugovi, Sukhbaatar, Selenge, Tuv, Uvs, Khuvsgul, Khentii).

In viral hepatitis A's social status, the incidence is high among schoolchildren, kindergartens, students, and the unemployed. School and kindergarten children account for 70% of all cases, an increase from the previous year.

## 6.15 Viral hepatitis B

As of 2019, a total of 219 cases of viral hepatitis B were reported in the nationwide, the case rate was 0.7 per 10 000 population, which decreased by 0.1 cases as compared to the same period of the previous year.

Figure 6. 20 The incidence of viral hepatitis B, 2010-2019

There is a tendency that the incidence rate has decreased since 2012 for over the last decade.

The incidence of viral hepatitis B was higher than the country average /0.8/ in Bayankhongor /1.1/, Khovd /1.0/, Khentii //1.0/, Dornogovi /0.9/, Khuvsgul /0.8/ aimags and, Ulaanbaatar /0.8/ per 10 000 population, respectively. No registered cases in Govisumber.

Figure 6. 21 The incidence of viral hepatitis B, by age group

Looking by age group, the incidence rates were high among people aged 20-34 years in 2019. By gender, majority of viral hepatitis B cases were diagnosed in men.

Looking by social status, the high incidence rates were among the workers and unemployed people.

## 6.16 Viral hepatitis C

A total of 71 cases of viral hepatitis C were reported in 2019 in the country. The rate was 0.2 per 10 000 population, which increased by 0.1 per 10 000 population compared to the previous year.

Figure 6. 22 The incidence of viral hepatitis C, 2010-2019

Viral hepatitis C has been declining in the last ten years. Viral hepatitis C infection has registered in 10 aimags and Ulaanbaatar city. Khentii (0.3) aimags and Ulaanbaatar (0.3) have higher than the national average. In 2019, no viral hepatitis C infections registered in Bayan-Ulgii, Bulgan,

Dornogovi, Govisumber, Dornogovi, Dundgovi, Zavkhan, Uvurkhangai, Umnugovi, Sukhbaatar, Selenge, Tuv and aimags.

In 2019, the viral hepatitis C infection will mainly affect people aged 20-64, and the incidence of people aged 35-39 and 50-54 will be higher than of the previous year and the average last five years.

### 6.17 Other viral hepatitis

A total of 63 cases of other viral hepatitis were reported in 2019 in the country. The rate was 0.2 per 10 000 population, which decreased by 24 cases or 0.1 per 10 000 population compared to the previous year. Accounting for 97.0 per cent (61) were viral hepatitis D, and 3.0 per cent (2) were viral hepatitis E.

Figure 6. 23 The incidence of viral hepatitis D, 2009-2019

Nationwide, the number of viral hepatitis Delta infections reported in the last ten years is declining. Nationwide, in 2019, the majority of people aged 20-44 will be infected with the viral hepatitis Delta, and the number of people aged 25-39 will increase from the previous year.

### 6.18 SEXUALLY TRANSMITTED INFECTIONS

In 2019, 17.9 thousand cases of sexually transmitted infections reported nationwide, increasing by 2.5 thousand or 16.4 per cent from the average of the last ten years, and by 1.7 thousand or 10.8 per cent from the previous year.

Figure 6. 24 Incidence of sexually transmitted infections, 2010-2019

The incidence of sexually transmitted infections was 56 per 10 000 population, in 2019, which increased by 3, compared the average of the last ten years and by 5, from the previous year.

Figure 6. 25 Incidence of sexually transmitted infections, by regions, 2010-2019

An average in the last ten years, the sexually transmitted infection accounting for 34.7 per cent, of all infectious diseases. Which is 4.8 points higher than the average of the last ten years and 1.2 points higher than the previous year.

Figure 6. 26 Percentage of STI's, of all communicable diseases, 2010-2019

In the last ten years, by type of sexually transmitted infections, gonorrhoea (gonococcal infection) accounted for 36.9-40.1 per cent of all sexually transmitted infections in 2010-2012, while syphilis accounted for 38.2-46.0 per cent in 2013-2019.

Figure 6. 27 STI's by type, /percentage/, 2010-2019

On average last ten years, 6,009 new syphilis reported annually, reaching 7,095 in 2019, an increase of 1,086 cases (18.1%) compared to the last ten years, 932 cases (15.1%) from the previous year.

In 2019, 5,772 cases of gonococcal infection registered, an increase of 707 (14.0%) from the average of the last ten years and 311 (5.7%) from the previous year.

The number of trichomoniasis cases was 4,980, in 2019, increased by 728 (15.1%) from the average of the last ten years and 492 (11.0%) from the previous year.

However, 18 cases of HIV registered in 2019, which is 4 (19.6%) lower than the average of the last ten years, are the same as the previous year. The incidence of sexually transmitted diseases (per 10,000 population) and type of infection, in the last ten years, syphilis reached 22 in 2019, increased two from the average of the last ten years and the previous year.

Figure 6. 28 STI's per 10 000 population , 2010-2019

The incidence rate of gonococcal infection (per 10,000 population) reached 18 in 2019, increasing one over the last ten years and the previous year. The incidence of trichomoniasis (per 10,000 population) reached 16, in 2019, an increase of 1 from the average of the last ten years and two from the previous year.

In 2019, a total of 17.9 thousand cases of STI's were registered, accounts for 38.3% of all communicable diseases, and the rate has increased by 4.7 percent or by 766 cases as compared to the last year. 33.9% of STI's were gonorrhea, 38.2% were syphilis, 27.8% were trichomoniasis and 0.1% were HIV/AIDS, respectively.

### 6.19 Syphilis

By age group, 86.2 per cent people with syphilis are young people aged 15-39, of which 62.8 per cent are women.

Figure 6. 29 The incidence of syphilis, by age groups, 2019

The incidence of syphilis (per 10,000 population) is 2-43 times higher for women aged 1-54 by age group and sex. The incidence decreases with age, and there is no gender difference.

Figure 6. 30 The incidence of syphilis, by regions, 2010-2019

The number of deaths due to congenital syphilis reached 12 in 2019, which increased 2 (22.4%), compared to the average of the last ten years and 1 (9.1%) from the previous year. The incidence rate of congenital syphilis (per 100,000 live births) is suspected to increase over the last ten years, reaching 84 in 2019, an increase of 34, compared to the average 10-years, and increased by 21,

compared to the previous year.

Incidence of congenital syphilis per 10 000 population was higher by 32-205 than the national and aimag average in the following aimags: Bulgan, Dornogovi, Dornod, Tuv and Orkhon aimags.

## **6.20 HIV infection**

The prevalence of HIV among the Mongolian population is less than 0.1%, and the prevalence of HIV in vulnerable groups of people is less than 5%, which makes Mongolia the country with low risk in population and high-risk in vulnerable groups.

Ever since the first registered case of HIV/AIDS in Mongolia in 1992, there have been a total of 286 cases registered by the end of 2019, of which 18 were registered in 2019.

There have been 44 people who passed away out of register 286. Of the registered 286 cases, 233 (81.5%) were males, 52 (18.2%) females, and one of uncertain gender identity.

## **6.21 ZOO NOTIC INFECTIONS**

At the national level, a total of 279 cases or 0.9 per 10 000 population of zoonotic infections were registered, accounted for 0.6 per cent of all communicable diseases. Incidence rate has decreased by 242 cases or 39.7 per cent, compared to the previous year.

Of the total registered cases of zoonotic diseases, 49.8 per cent is tick-borne rickettsioses, 35.8% is brucellosis, 6.8 per cent is tick-borne encephalitis, and 6.1 per cent is other spirochaetal infections, respectively.

## **COMMUNICABLE DISEASE MORTALITY**

There were 124 deaths were registered which caused by communicable diseases. According to the registration of total cases of death, there were 89 cases of tuberculosis, 12 cases of congenital syphilis, 2 cases of bacterial sepsis of newborn, 5 cases of meningococcal infection, 5 cases of viral hepatitis, 1 cases of shigellosis, and 4 case of HIV/AIDS, respectively.

## CHAPTER 7. NONCOMMUNICABLE DISEASES

The Sustainable Development Goals (SDGs) are of goals 3.4 and 3.8 focused as follows: by 2030, reduce by one-third premature mortality from non-communicable diseases through prevention and treatment and promote mental health and well-being and, achieve universal health coverage, including financial risk protection, access to quality essential health-care services and access to safe, effective, quality and affordable essential medicines and vaccines for all.

Figure 7. 1 Number of noncommunicable diseases, /thousand/

In nationwide, the number of recorded disease (overlapping figures) has reached nationally 3.6 million (cumulative) incidents in 2019. The increase was 2.2 times that of an average last decade and by 18.3 per cent compared to the previous year. There were 1.9 million cases recorded for Ulaanbaatar alone, demonstrating 2.6 times increase in incidents compared to average last decade and 1.7 million cases had been reported in rural areas, which is a 1.6 fold increase in records compared to the previous decade.

Figure 7. 2 The morbidity rate of population, per 10 000 population, 2010-2019

The population's morbidity rate reached 11,298 in 2019, an increase of 1.8 times compared to 2010, and over the last decade, female have accounts 61.3 per cent and male accounts of 31.7 per cent.

## 7.1 The leading causes of the population morbidity

In 2019, the leading causes of morbidity were per 10 000 population diseases of the respiratory system 2099, diseases of the digestive system 1845, diseases of the circulatory system 1321, diseases of the genito-urinary system 1120 and injuries, poisoning and certain other consequences of external causes 666 per 10 000 population, respectively. Compared to 2018, the morbidity of the digestive system and genitourinary system are decreased and others increased.

*Table 7. 1 The leading causes of population morbidity, percentage, 2010-2019*

Country wide	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

## 7.2 Diseases of the respiratory system

Nationwide, the incidence rate of diseases of the respiratory system (per 10,000 population) reached 2,099 in 2019, an increase of 589 compared to the average of the last decade and 387 from the previous year. However, the level of respiratory diseases in 2019 increased to 2022 for males, which higher by 584 per 10 000 population than the 10-year average. For females, it was 2174, which increased by 643 compared to the average last decade.

Figure 7. 3 The prevalence rate of diseases of the respiratory system (per 10,000 population), by sex, 2010-2019

By region, the respiratory system's Diseases are the highest in the central region in 2019 per 10,000 population.

Figure 7. 4 The number of diseases of the respiratory system (per 10,000 pop), by region, 2019

Compared to last ten years, the prevalence of respiratory diseases has increased in all age groups, and in 2019, by age group, it increased to 8139 in 0-4 years, an increase of 2,724 from 2011, and in 2019, which accounts for 46.9 per cent are children aged under five.

Figure 7. 5 The number of diseases of the respiratory system (per 10,000 pop), by age groups, 2010 and 2019

In 2019, looking for the type of diseases of the respiratory system, acute upper respiratory infections accounted for 30.8 per cent, pneumonia for 17.8 per cent, Influenza for 9.1 per cent, acute bronchitis for 14.1 per cent, and chronic obstructive pulmonary disease for 7.7 per cent. Acute upper respiratory tract infections and pneumonia are more common in males.

Table 7. 2 Percentage of respiratory diseases, 2010 and 2019

The leading causes	2010		2019	
	Male	Female	Male	Female
Total	100.0	100.0	100.0	100.0
Acute upper respiratory infections	30.8	29.9	31.2	30.5
Influenza	17.8	18.1	8.9	9.3
Pneumonia	23.7	20.8	19.2	16.6
Acute bronchitis	8.5	7.7	15.3	13.0
Chronic obstructive pulmonary disease	6.3	7.1	7.0	8.4
Others	13.0	16.4	18.5	22.3

Acute upper respiratory infections (including acute nasopharyngitis, acute sinusitis, acute pharyngitis, acute tonsillitis, acute laryngitis and tracheitis, and other acute upper respiratory tract infections) were 140 points higher than the average last decade, pneumonia 76 points and acute bronchitis increased by 111 points, respectively.

Figure 7. 6 The number of respiratory diseases, per 10 000 pop, 2010-2019

### 7.3 Diseases of the digestive system

An average of the last ten years, the digestive system's diseases, the second leading cause of morbidity in the population, account for 15.5 per cent of all morbidity. The digestive system diseases (per 10,000 population) reached 1,485 in 2019, an increase of 218 from the average of the last ten years and 297 from the previous year. In 2019, the digestive system's level of diseases increased to 1,481 for males, an increase by 474, compared to the average last decade, and 2,199 for female, an increase of 722 from average last decade.

Figure 7. 7 The number of diseases of the digestive system, per 10 000 pop, by sex, 2010-2019

By region, the digestive system's diseases per 10,000 population in 2019 are higher by 325 than the national average (1845) in the western region, 308 in the eastern region, and higher by 175 in the central region.

Figure 7. 8 The number of diseases of the digestive system (per 10,000 pop), by region, 2019

Compared to 2010 and 2019, the prevalence of digestive diseases increased by all age group. In 2019, the highest number of people over 65 was 3,616, an increase of 1,722 compared to 2010.

Figure 7. 9 The number of diseases of the digestive system (per 10,000 pop), by age groups, 2010 and 2019

In 2019, looking by type of digestive diseases, which diseases of the oral cavity, salivary glands and jaws accounted for 41.1 per cent, Diseases of oesophagus, stomach and duodenum 16.0 per cent, appendicitis 2.9 per cent, noninfective enteritis and colitis 8.9 per cent, liver disease 11.8 per cent, disorders of the gallbladder, biliary tract and pancreas accounted for 14.2 per cent, respectively.

Table 7. 3 Percentage of digestive diseases, 2010 and 2019

The leading causes	2010			2019		
	Male	Female	Total	Male	Female	Total
Total	100.0	100.0	100.0	100.0	100.0	100.0
Oral cavity, salivary glands and jaws	22.4	26.2	24.7	38.7	42.7	41.1
oesophagus, stomach and duodenum	18.1	20.7	19.7	14.7	16.8	16.0
Liver diseases	16.1	13.4	14.5	12.8	11.1	11.8
gallbladder, biliary tract and pancreas	12.0	18.0	15.6	11.6	15.9	14.2
noninfective enteritis and colitis	15.1	10.2	12.1	11.3	7.3	8.9
appendicitis	9.7	8.7	9.1	3.4	2.6	2.9
Others	6.5	2.9	4.3	7.6	3.6	5.1

#### 7.4 Diseases of the oral cavity, salivary glands and jaws

Among diseases of the oral cavity, salivary glands and jaws, tooth development and eruption disorders accounted for 56.3 per cent, dental caries 38.1 per cent, and Other diseases of hard tissues of teeth 5.6 per cent.

By region, the oral cavity diseases, salivary glands, and jaws are higher than the national average in the eastern and western regions.

Figure 7. 10 The number of Other diseases of hard tissues of teeth, per 10 000 pop, by region, 2010-2019

### 7.5 Dental caries

Among the diseases of the digestive system, dental caries accounted for 14.2 per cent on average for the last ten years and has been increasing steadily since 2010, reaching 15.7 per cent in 2019, an increase of 1.4 percentage points from the 10-year average. As of 2019, the number of dental caries cases per 10,000 population has increased by 110, compared to the average of the last ten years.

Figure 7. 11 Dental caries, per 10 000 population, by region, 2019

In 2019, which is higher than the national average (220 per 10,000 population) as follows: Dornod / 979 /, Umnugovi / 945 /, Dornogovi / 551 /, Zavkhan / 481 /, Dundgovi / 459 /, Bulgan / 392 /, Gobi-Altai / 363 /, Uvs / 363 /, Uvurkhanga / 333 / and Khuvsgul / 288 / aimags. In terms of gender, in 2019, accounts for 35.0 percent were males and 65.0 percent were females.

### 7.6 Diseases of the oesophagus, stomach and duodenum

Among diseases of the oesophagus, stomach and duodenum, which accounting for gastritis and duodenitis accounted for 74.6 per cent, gastrointestinal ulcers for 9.6 per cent, dyspepsia for 7.2 per cent, gastroesophageal reflux for 5.6 per cent, oesophagus, gastrointestinal and other upper gastrointestinal diseases for 2.6 per cent, and esophagitis for 0.4 per cent.

Figure 7. 12 Number of oesophagus, stomach and duodenum diseases, per 10 000 population, by region, 2019

Among the digestive system diseases, liver disease accounted for 11.8 per cent in 2019, a decrease of 2.7 per cent compared to 2010. In 2010, liver disease was 118 per 10,000 population in males and 137 in females, but in 2019, it increased to 189 in the males and 245 in the females.

*Table 7. 4 Percentage of liver diseases, 2019*

Leading causes	Aimag	Ulaanbaatar	Total
Total	100	100	100
Chronic hepatitis	45.3	40.5	43.0
Fibrosis and cirrhosis of liver	28.9	36.5	32.4
Toxic liver disease	1.4	1.1	1.2
Alcoholic liver disease	0.4	0.8	0.6
Other diseases of liver	24.0	21.1	22.7

### 7.7 Chronic hepatitis

In 2019, chronic hepatitis accounted for 43.0 per cent and cirrhosis of 32.4 per cent, of all liver diseases, at the national level. The prevalence rate of chronic hepatitis is higher by 9-13 than the national average (94) in the Khangai and Eastern regions, in 2019, and lower by 3-7 in the western and central regions.

In 2019, which higher than the national average as follow aimags: Gobi-Altai / 206 /, Tuv / 163 /, Khuvsgul / 152 /, Sukhbaatar / 144 /, Bayan-Ulgii / 121 /, Umnugovi / 119 /, Orkhon / 114 /, Dornogovi / 115 /, Khentii / 107 /, Dundgovi / 106 / and Uvurkhangai / 196 /. In terms of gender, in 2019, accounts for 43.3 percent were males and 56.7 percent were females.

*Figure 7. 13 The number of chronic hepatitis, per 10 000 population, by region, 2019*

### 7.8 Fibrosis and cirrhosis of liver

The prevalence rate of liver fibrosis and cirrhosis was 52.3 per 10 000 population for female, in 2010, which increased by 26.5 per 10 000 population or it was 78.5, in 2019.

In terms of age, the total population aged 45-65 increased from 161.5 in 2010 to 225.6 in 2019, compared to 2010 increased by 64.1 per 10 000 population. In 2019, Gobi-Altai / 120 / Tuv / 87 /, Darkhan-Uul / 86 /, Ulaanbaatar / 81 /, Khentii / 79 /, Sukhbaatar / 78 / and Orkhon / 75 / are higher than the national average. In terms of gender, in 2019, 43.3 per cent of male and 56.7 per cent of a female. In the Eastern region and Ulaanbaatar, it is higher by 4-10 per 10 000 population than the national average, and in other regions, it is lower by 2-19 per 10 000 population.

Figure 7. 14 Liver cirrhosis, per 10 000 population, by region, 2019

## 7.9 Diseases of the circulatory system

Cardiovascular diseases are the third leading cause of the population morbidity, which accounted for 12.0 per cent an average for the last ten years, of all morbidity.

The prevalence of cardiovascular diseases reached 1,321 in 2019, increased by 344, compared to the average of the last ten years and increased by 172 from the previous year. In 2019, the prevalence of cardiovascular diseases was 1,026 for male, increased by 288, compared to the average last 10-year, and 1,609 for female, increased by 435 from the 10-year average.

Figure 7. 15 Diseases of the circulatory system, per 10 000 pop, 2010-2019

In 2019, the cardiovascular diseases per 10,000 population were higher by 296 than the national average (1321) in the Khangai region, 258 in the central region and 134 in the western region.

Figure 7. 16 The number of diseases of the circulatory system (per 10,000 pop), by region, 2019

Comparing the level of cardiovascular disease by age group in 2010 and 2019, the age group incidence has increased. In 2019, the highest number of people over 65 was 8,992, an increase of 1.8 times from 2010.

Figure 7. 17 The number of diseases of the circulatory system (per 10,000 pop), by age groups, 2010 and 2019

In 2019, looking by type of diseases of the circulatory system, accounts for 49.7 per cent of hypertension, 20.6 per cent was ischaemic heart diseases, 13.3 per cent was the cerebrovascular disease, 4.0 per cent was rheumatic heart disease, 1.6 per cent was diseases of arteries, arterioles and capillaries and, other and unspecified disorders of the circulatory system for 4.7 per cent. By gender, rheumatic heart disease and hypertension are more common in females, while ischemic heart disease, cerebrovascular disease, arterioles and capillaries, and other cardiovascular diseases occur in males.

Table 7. 5 Percentage of Diseases of the circulatory system, 2010 and 2019

Leading causes	2010			2019		
	Male	Female	Total	Male	Female	Total
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>
Hypertensive diseases	38.3	44.8	42.4	45.0	52.7	49.7
Ischaemic heart diseases	28.8	22.7	25.0	23.3	19.0	20.6
Cerebrovascular diseases	12.0	9.0	10.1	14.7	12.5	13.3
Diseases of veins, lymphatic vessels and lymph nodes, not elsewhere classified	4.9	3.1	3.8	6.4	5.7	6.0
Cardiomyopathy in diseases classified elsewhere	9.3	14.2	12.4	3.1	4.6	4.0
Diseases of arteries, arterioles and capillaries	2.1	2.2	2.2	1.7	1.5	1.6
Other and unspecified disorders of the circulatory system	4.5	3.9	4.1	6.0	4.0	4.7

## 7.10 Arterial hypertension

An average last decade, arterial hypertension accounts for 50.3% of all diseases of the circulatory system. It has been growing steadily since 2010 to 49.7 per cent in 2019, an increase of 2.8 per cent from the 10-year average. By gender, the rate was 853.8 per 10 000 population for females and 467.3 for males per 10 000 population. The morbidity rate was higher in the khangai and central regions compared to other regions. And the rate was higher in the following aimags: Tuv /1493.6/, Arkhangai /962.5/, Bulgan /901.3/ and Bayankhongor /840.7/.

Figure 7. 18 Arterial hypertension, per 10 000 population, by region, 2019

### 7.11 Ischaemic heart diseases

An average last decade, Ischaemic heart diseases account for 23.0% of all circulatory system diseases. In 2019, it was 20.6 per cent, which decreased by 2.4 per cent from the 10-year average. By gender, the rate was 305 per 10 000 population for females and 239 for males per 10 000 population. The morbidity rate was higher in the Khangai, western and central regions compared to other regions.

*Figure 7. 19 Ischaemic heart diseases, per 10 000 population, by region, 2019*

### 7.12 Cerebrovascular diseases

An average last decade, cerebrovascular disease accounted for 11.8 per cent, of all diseases of the circulatory system. In 2019, it was 13.3 per cent, which decreased by 1.5 per cent from the 10-year average. As of 2019, the cerebrovascular disease has increased by 59 per 10 000 population, compared to the national average.

By gender, the rate was 201 per 10 000 population for females and 150 for males per 10 000 population. The morbidity rate was higher in the central region compared to other regions.

*Figure 7. 20 Cerebrovascular diseases, per 10 000 population, by region, 2019*

### 7.13 Diseases of the genitourinary system

The fourth leading cause of population morbidity, diseases of the genitourinary system, accounted for 11.1 per cent, of all diseases, an average the last ten years.

The number of diseases of the genitourinary system (per 10,000 population) reached 1120, in 2019, increased by 255 from the average the last ten years and 188 from the previous year. In 2019, the genitourinary system's incidence was 584 for male, increased by 184 from the 10-year average, and 1640 for female, increased by 358 from the 10-year average.

*Figure 7. 21 The number of diseases of the genitourinary system, per 10 000 population, by sex, 2010-2019*

By location of genitourinary diseases, as of 2019, which is higher by 224 in the Khangai region, 189 in the western region and 73 in the central region, compared to the national average (1120) per 10 000 pop.

*Figure 7. 22 Diseases of the genitourinary system, per 10 000 population, by region, 2019*

Comparing the prevalence of the diseases genitourinary system by age group in 2010 and 2019, the prevalence increased in all age groups. In 2019, the high number of people over the age of 65 was 2,640, an increase of 2.2 times from 2010.

Figure 7. 23 Diseases of the genitourinary system, per 10 000 pop, by age groups, 2010 and 2019

In 2019, by type of diseases of the genitourinary system, accounted for 50.7 per cent of renal tubulointerstitial diseases, 16.1 per cent of Inflammatory diseases of female pelvic organs, 9.2 per cent of noninflammatory disorders of the female genital tract, 8.1 per cent of other disorders of kidney and ureter, 7.5 per cent of diseases of male genital organs, 2.7 per cent of disorders of the breast, 2.6 per cent of glomerular diseases 16.1 per cent and renal failure for 1.6 per cent, respectively. However, the type of diseases of the genitourinary system differs by sex.

Table 7. 6 Percentage of Diseases of the genitourinary system, 2010 and 2019

Leading causes	2010			2019		
	male	female	total	male	female	total
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

#### 7.14 Renal tubulo-interstitial diseases

An average last decade, the renal tubulointerstitial diseases accounted for 55.0 per cent, of all diseases of the genitourinary system. In 2019, it was 50.7 per cent, which decreased by 4.3 per cent from the 10-year average. As of 2019, the rate was 567 per 10 000 population, has increased by 93 the nationwide. By gender, the rate was 820 per 10 000 population for females and 307 for males per 10 000 population.

Figure 7. 24 Renal tubulointerstitial diseases, per 10 000 pop, 2010-2019

By location, the prevalence is higher than the national average in the central, Khangai and western regions. Which is high than national average as follows: Arkhangai / 1054 /, Bayankhongor / 1034 /, Bayan-Ulgii / 985 /, Zavkhan / 925 /, Bulgan / 858 /, Tuv / 892 /, Uvs / 732 /, Gobi-Altai / 601 /, Uvurkhangai / 663 /, Khuvsgul / 683 /, Dornogovi / 602 /, Dundgovi / 675 /, Umnugovi / 645 /, Selenge / 651 /, Orkhon / 585 / and Khentii / 584 / aimags.

Figure 7. 25 Renal tubulointerstitial diseases, per 10 000 pop, by region, 2019

### 7.15 Inflammatory diseases of female pelvic organs

An average last decade, the Inflammatory diseases of female pelvic organs accounted for 16.4 per cent, of all diseases of the genitourinary system. In 2019, it was 16.1 per cent, which increased by 0.3 per cent from the 10-year average. As of 2019, the rate was 181 per 10 000 population, has increased by 39 the nationwide. The morbidity rate was higher in the khangai, western and central regions compared to other regions.

Figure 7. 26 The Inflammatory diseases of female pelvic organs, by region, 2019

## 7.16 Diseases of the nervous system

The fifth leading cause of population morbidity, Diseases of the nervous system, accounted for 6.1 per cent, of all diseases, an average the last ten years.

The number of Diseases of the nervous system (per 10,000 population) reached 741, in 2019, increased by 238 from the average the last ten years and 113 from the previous year. In 2019, the Diseases of the nervous system prevalence was 563 for male, increased by 176 from the 10-year average, and 915 for female, increased by 317 from the 10-year average.

Figure 7. 27 The prevalence of diseases of the nervous system, per 10 000 population, by sex, 2010-2019

By location of Diseases of the nervous system, as of 2019, which is higher by 8 in the Khangai region, 163 in the western region and 21 in the central region, compared to the national average (741) per 10 000 pop.

Figure 7. 28 The prevalence of diseases of the nervous system, per 10 000 pop, by region, 2019

Compared to 2010 and 2019, the prevalence of the nervous diseases increased by 81 for 0-4-year-olds and 15 for 5-9-year-olds, while the incidence decreased in other age groups. In 2019, the highest number of people over the age of 65, or 531, decreased by 172 compared to 2010.

Figure 7. 29 The prevalence of diseases of the nervous system, per 10 000 population, by age groups, 2010, 2019

In 2019, the diseases of the nervous system, which is accounting for 35.7 per cent of nerve, nerve root and plexus disorders, 26.5 per cent of migraine, other headache syndromes, 7.7 per cent of epilepsy, 6.1 per cent of dystonia, 2.0 per cent of cerebral palsy and other paralytic syndromes, 1.8 per cent of transient cerebral ischaemic attacks and related syndromes, 1.1 per cent of systemic atrophies primarily affecting the central nervous system and for 18.9 per cent were other disorders of the nervous system, respectively. However, the type of nervous system diseases differs by sex.

Table 7. 7 Percentage of Diseases of the nervous system, 2010 and 2019

Leading causes	2010			2019		
	male	female	total	male	female	total
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>
Nerve, nerve root and plexus disorders G50-59	27.5	27.3	27.4	34.6	36.4	35.7
Migraine, other headache syndromes	17.7	19.7	18.5	20.8	29.9	26.5
Epilepsy	13.1	11.3	12.4	11.0	5.8	7.7
Dystonia	8.1	9.2	8.5	5.4	6.6	6.1
Cerebral palsy and other paralytic syndromes G80-83	1.5	1.1	1.3	3.3	1.3	2.0

Systemic atrophies primarily affecting the central nervous system	3.6	3.1	3.4	1.5	0.9	1.1
Other disorders of the nervous system	24.3	23.3	23.9	22.0	17.1	18.9

### 7.17 Nerve, nerve root and plexus disorders

An average last decade, the nerve, nerve root and plexus disorders accounted for 32.8 per cent, of all diseases of the nervous system. In 2019, it was 35.7 per cent, which increased by 2.9 per cent from the 10-year average. As of 2019, the rate was 167 per 10 000 population, has increased by 98 the nationwide. The rate was 202 per 10 000 population, has increased by 39 the nationwide. By gender, the rate was 202 per 10 000 population for females and 126 for males per 10 000 population.

Figure 7. 30 The nerve, nerve root and plexus disorders, per 10 000 pop, 2010-2019

By location, the prevalence is higher than the national average in the central, eastern and western regions. From the aimags of Gobi-Altai / 593 /, Bulgan / 480 /, Zavkhan / 464 /, Tuv / 401 /, Dornogovi / 396 /, Khentii / 382 /, Sukhbaatar / 332 /, Bayankhongor / 332 /, Dundgovi / 312 /, Arkhangai / 274 / and Darkhan-Uul / 276 / aimags are higher than the national average.

Figure 7. 31 The nerve, nerve root and plexus disorders, per 10 000 pop, by region, 2019

### 7.3 DIABETES

Diabetes accounted for 41.5% of all diseases of endocrine, nutritional and metabolic disorders and the morbidity rate was 82.9 per 10 000 population in 2018, which increased by 17.9 as compared to the last year /the rate was 100.8 in 2017/.

The gender specific incidence rate was 77.8 per 10 000 population for males and 87.8 per 10 000 population for females. Looking by age groups, the highest rate was recorded among people aged 45-65 years, giving a rate of 524.8 per 10 000 population (16 160 cases). When stratifying by location, the highest rate was reported in the central region as giving a rate of 69.0 per 10 000 population. In the central region, the rate was higher in Darkhan-Uul /111.3/, Umnugovi /69.3/, Tuv /66.9/ and Selenge /63.3/ aimags.

## CHAPTER 8. POPULATION MORTALITY

In Mongolia, the average last decade of population mortality reported 16.7 thousand or the general mortality rate is 5.7 per 1000. The mortality rate reached 17.2 thousand in 2019, an increase of 513 people (3.1%) from the average of the last ten years, and a decrease of 126 people (0.7%) from the previous year.

Figure 8. 1 Population mortality, 2000, 2005, 2010-2019

Looking by gender, in 2010, the mortality rate was 8 for male and three times higher than for female. In 2019, the males' mortality rate decreased by one from 2010 to 7 and was three times higher than for females.

Figure 8. 2 Population mortality rate, per 1000 population, by gender, 2010-2019

One of the indicators of mortality is the Age-specific death rates (ASDR), which provides a decline of the ASDR for each gender as of 2019. As the infant mortality rate is not high in

our country, you can see that the image below is “J” shaped. The mortality rates for males also high in all age groups.

Figure 8. 3 Age-specific death rates, by gender, 2019

In Mongolia, the first leading cause of death was respiratory diseases in 1990, and it has been a leading cause of cardiovascular disease since 1992.

Figure 8. 4 The leading causes of population mortality, per 10 000 population, 2009-2019

In terms of age group mortality, 40.4% of male and 68% of female died at retirement age. The other hand, 52.2% or half of the male and 24% of female died during the working period. Mortality among working-age male is 3.3 times higher than among women.

Figure 8. 5 Percentage of population mortality, by age groups, 2019

Table 8. 1 The five leading causes of population mortality, per 10 000 population, 2019

	Total	Diseases of the circulatory system	Neoplasms	Injury, poisoning and certain other consequences of external causes	Diseases of the digestive system	Diseases of the respiratory system
<b>Sex</b>

## 8.1 Mortality caused by diseases of the circulatory system

Mortality caused due to circulatory system was 7.1 per cent of all deaths in 1950, 23.4 per cent in 1985, 30.8 per cent since 1995, and 32.1 per cent in 2019. Each year due to diseases of the circulatory system 5 000-5 500 people, or 1 out of 3 of people died, which remains the leading cause of death.

The first leading cause of death in the population is cardiovascular disease, which accounts for 59.3% males and 40.7% of females. Cardiovascular diseases account for the majority of ischemic heart disease, stroke, other cardiovascular diseases, and heart attacks. In each of these common diseases, the majority are male.

In terms of age, males died at a younger age than females, with most males under 45 and the majority of females under 60. On the other hand, 42% of the male die of working age, and 17% of the female die of cardiovascular disease during the working period.

The gender-specific mortality rates for cardiovascular diseases were 20.8 per 10 000 population for males and 13.9 per 10 000 population for females in 2019. Due to cardiovascular diseases, the mortality rate was higher in the Khangai, Central and Western regions, and lower in the Eastern aimags than the mean country rate.

The mortality rate due to cardiovascular diseases (per 10,000 population), which is the leading cause of death, is higher by 2-5, than the national average in the Khangai and Western regions, and lower by 2, than the national average in the eastern region, and in the central region was the same level, of the national average. In terms of aimags and the Ulaanbaatar, the highest number is 29 in Khuvsgul aimag, higher by 10, than the national average. It was 11 in Govisumber, which is lower by 8, than the national average.

96.4 per cent of deaths from cardiovascular diseases are over 40 years old, which accounted for 44.7 per cent of Ischemic heart disease and stroke for 23.7 per cent, of all Cardiovascular diseases. In terms of location, 39.5 per cent of deaths from cardiovascular diseases were registered in Ulaanbaatar.

*Figure 8. 6 The mortality rate of cardiovascular diseases, per 10 000 population, 2019*

The leading causes of mortality rates of cardiovascular diseases compared by age group and sex are as follows:

- Ischemic heart disease was 23.4.
- Stroke was 16.4.
- Arterial hypertension was 0.7 per 10 000 population in males aged 45-64.

Compared to women's mortality rate at the same age group, rates of ischemic heart disease were 4.3 times higher, and stroke was 1.8 times higher in men than in women.

The stroke was the leading cause of mortality among Mongolian men, and the mortality rate was 4.52 per 10 000 population in 2019, which has decreased by 0.72 promile compared to the previous year.

Table 8. 2 The mortality rate of cardiovascular diseases, by causes, per 10 000 population, 2019.

	Diseases of the circulatory system	Stroke	Arterial hypertension	Ischemic heart disease
<b>Total</b>	<b>17.34</b>	<b>4.52</b>	<b>0.47</b>	<b>7.75</b>
under 20	0.3	0.1	0.0	0.1

45-64	19.0	9.0	0.4	5.3
Above 65	188.2	35.2	8.1	93.7

As of 2019, the ischemic heart diseases accounts for 44.7 per cent, of all cardiovascular diseases. A total of 2667 death cases registered due to ischemic heart diseases, which is 142 or 5.4 per cent decreased than the average of the last ten years and 189 or 7.9 per cent decreased than the previous year. An average last decade, the number of deaths due to ischemic heart diseases per 10,000 population is higher by 4, for males than the females.

Figure 8. 7 The mortality rate of ischemic heart disease, per 10 000 population, by sex, 2009-2019

Stroke and myocardial infarction account for the majority of death due to cardiovascular diseases, accounting 40.2% and 40.1%, in 2009. In 2019, 23.7% of strokes and 44.7% of myocardial infarction occurred.

Figure 8. 8 The mortality rate of stroke, per 10 000 population, by sex, 2009-2019

## 8.2. Cancer mortality

Since 1990, cancer has been the second leading cause of population mortality in Mongolia. In 2019, cancer related mortality rate accounted for 26.6% of total deaths and the rate was 16.8 per 10 000 population for males and 13.3 per 10 000 population for females.

The second leading cause of death, cancer, is 55% male and 45% female, or 1.2 times higher than women. In terms of cancer type, the majority of deaths due to liver cancer, stomach cancer, respiratory (bronchial) and lung.

Figure 8. 9 The mortality rate of cancer, per 10 000 population, 2009-2019

The five leading causes of cancer by primary sites in males were liver, stomach, lung, bronchial tubes, esophagus and colon/rectum, while in females they were liver, stomach, cervix, esophagus, lung and bronchial tubes.

Liver cancer continues to be the leading cause of death in both male and female. The number of deaths is increasing every year, and in 2019 it increased by 473 cases compared to 2009.

Figure 8. 10 The mortality rate of cancer, per 10 000 population, 2009-2019

In 2019, 76.1% of cancer patients diagnosed at stage III/IV or late-stage and 65.3% of people who died from cancer survived less than one year after being diagnosed. Compared to 2009, the percentage of cancer diagnosed during the late stages decreased by 0.8 per cent. The percentage of cancer patients survived for less than a year after the diagnosis increased by 21.5%.

### 8.3 Mortality due to injuries, poisoning and certain other consequences of external causes

Mortality due to injuries, poisoning and certain other consequences of external causes are still the third leading cause of death in Mongolia, accounting for 16.9 per cent of all deaths in 2019.

There are traffic accidents, suicides, industrial accidents, homicide, other accidents, and unexplained causes, and in all of these injuries, males are higher to die than females.

Table 8. 3 The number of death, by causes, selected years.

Causes	2005		2010		2015		2018		2019	
	male	female	male	female	male	female	male	female	male	female
Diseases	7158	5484	10325	6,951	9822	6552	8115	6292	8244	6134

Uncertain	110	14	74	16	65	13	101	26	118	11
Industrial injury	42	9	35	4	39	4	27	0	22	0

In 2019, more than 50 per cent of deaths among children and youth aged 10-35 were due to injuries and deaths caused by external causes, of which about 80 per cent of deaths among children aged 15-19 were due to injuries and external causes. In addition, 51 per cent of children aged 10-14, 60 per cent of young people aged 20-34, and 49 per cent of young people aged 35-39 died from external causes.

Figure 8. 11 Age distribution of broad causes of death, /percent/, 2019

Figure 8. 12 Mortality rate of injuries, 2009-2019

#### 8.4 Population mortality due to transport accident

Considering the causes of injury accidents and external causes of death accounted for 23.6 per cent of the transport accident. An average, the last decade, was reported of 556 cases of death due to transport accident.

In 2019, the number of death due to transport accidents was 557, which increased by 1 case and 35 cases, compared to the average of the last decade and the previous year. The male is 3.4 times more likely to die in traffic accidents than female.

Figure 8. 13 The mortality rate of transport accident, 2009-2019

In terms of the structure of deaths caused by transport accidents, in 2019, other and unspecified transport accidents accounted for 45.6%, motorcycle rider injured in transport accident for 27.6%, and a pedestrian injured in transport accident 26.4%.

Looking by sex of deaths caused by transport accidents, the males other and unspecified transport accidents are 2.3 times, motorcycle rider injured in transport accident 13 times, and a pedestrian injured in transport 1.5 times higher than females.

In 2019, the number of deaths in transport accidents by age group was as follows: children under five account for 4.8 per cent, 5-14-year-olds for 5.6 per cent, 30-39-year-olds for 23 per cent and 40-49-year-olds for 22.3 per cent, which is high in the age category.

Figure 8. 14 The transport accident, by age groups, 2019

Figure 8. 15 The transport accident, by causes, 2009-2019

# 8.5 Suicide mortality rate

Over the last ten years, approximately 16.9 thousand deaths were recorded per year an average, of which 2.8% of deaths were suicide deaths. In 2009, the suicide rate was 1.7 per 10,000 population, while in 2019, it decreased to 1.4.

According to the mean mortality rate during 2010-2019, 60.5% of total deaths occurred among men and 85.0% of suicides were males. In 2019, the number of suicide was 447, it has accounted for 2.6% of total deaths.

Figure 8. 16 Suicide mortality rate /per 100 000 population/, by sex

Despite the small percentage of suicides in total deaths, there are different pattern observed in terms of age groups. For instance, there were 1 in 4 persons aged 15-24, 1 in 5 persons aged 25-29 died by suicide, of all deaths in each ages groups in 2019.

Table 8. 4 Percentage of suicide of all deaths, by age groups, 2003-2019

Year	2003	2008	2013	2014	2015	2016	2017	2018	2019

65+	0	0.1	0.2	0.3	0.1	0.1	0.2	0.2	0.8

Looking by above table, in 2003, suicide accounted for 3.3% of all deaths among children 10-14 years old. However, suicide death reached 11.6% in 2019 as increased by 3 times, with the most difference, compared to other age groups.

A high trend of suicide in males among 20-24 years old was observed, it was still high in 2018. In 2018, the female suicide rate was high among children 15-19 years old.

*Table 8. 5 The number of suicide, by type, 2009-2019*

Cause of suicide	Sex	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

## 8.6 Mortality due to other external causes of accidental injury

Of the other external causes of accidental injury, 45.2 per cent were accidental poisoning by, and exposure to alcohol deaths and 24.5 per cent were exposed to natural forces.

Other external causes of accidental injury include accidental poisoning by exposure to alcohol, exposure to forces of nature, falls, other unintentional threats to breathing, accidental exposure to gases and vapours, falls from buildings, falls from different heights,

and exposure to inanimate mechanical forces. In all of these causes of accidents, males are more likely than women to be exposed to alcohol, natural disasters, with male accounting for 80-90%.

Figure 8. 17 Accidental poisoning by exposure to alcohol, by sex, 2009-2019

## 8.7 Mortality due to diseases of the digestive system

Mortality due to the digestive system's diseases accounted for 8.5 per cent of all deaths in 2009, and, it was 1,173 cases or 6.8 per cent, in 2019. An average of 1317 cases was registered in the last ten years, and in 2019 it decreased by 144 cases from the average of the last ten years and by 14 cases from the previous year.

Figure 8. 18 Mortality rate due to diseases of the digestive system, 2009-2019

The fourth leading cause of death in the population is the digestive system's diseases, which accounts for 56% of male and 44% of female.

Figure 8. 19 Mortality rate due to diseases of the digestive system, by sex, 2009-2019

As of 2019, 55% of diseases of the digestive system deaths are due to fibrosis and cirrhosis of the liver. By age group, 45-60-year-olds account for 60 per cent or the majority, and males are higher than females.

Figure 8. 20 Mortality rate of cirrhosis of liver, by sex, 2009-2019

## 8.8 Mortality of Diseases of the respiratory system

As of the end of 2019, 804 deaths due to the respiratory system's diseases were registered nationwide, an increase of 52 cases or 6.9 per cent compared to the previous year. Deaths due to respiratory diseases, accounting 66.2 per cent, were males, and 38.8 per cent were females.

Figure 8. 21 Number of deaths of Diseases of the respiratory system, by sex, 2009-2019

Figure 8. 22 The mortality rate of diseases respiratory system, per 10 000 population, 2009-2019

The respiratory system's mortality rate decreased from 2.72 per 10,000 population in 2010 to 2.5 in 2019. As of 2019, the death due to pneumonia is 1.4 per 10,000, accounting for 53.6 per cent of all deaths from respiratory diseases.

Figure 8. 23 Mortality rate due to pneumonia, per 10 000 pop, 2009-2019

Figure 8. 24 Mortality rate due to chronic bronchitis and asthma

## CHAPTER 9 INDICATORS OF OF PHARMACEUTICAL SECTOR

## 9.1 Drug Registration

Under the State legislation on the implementation of drug policy, creating a single stream reporting system of pharmaceutical sector, the statistics and information of pharmaceutical sector are integrated with a purpose of ensuring information transparency, improving accessibility and strengthening a good governance of pharmacy.

In order to provide good quality, safe and effective drugs/medicines to health organizations and people drug registration has been started in Mongolia since 1994.

Based on the 22<sup>nd</sup> provision of Law on Drug and Medical Devices, drug registration is regulated by “The Registration Rule of Pharmaceuticals and Raw materials”, approved by Health Minister’s order A/295 in 2019.

Figure 9. 1 New registered drugs and medical raw materials, 1994-2019

In 2019, 459 new drugs have been registered, and 410 of them are imported drugs, 6 traditional medicines and 37 domestically produced drugs. In 2019, 39 medical raw materials have been newly registered and the registration time of 674 drugs and 15 medical raw materials was extended, and 70 drugs, 1 pharmaceutical raw materials were removed from the registration.

Figure 9. 2 The number of registered drug and pharmaceutical raw materials, 2013-2019

As of 2019, there are 4 558 drugs and 138 pharmaceutical raw materials have been registered in Drug Registry of Mongolia,

Figure 9. 3 The indicator of drug prescription, 2019

In 2019, a total of 4 696 registered drugs, 33.8% of them was over-the-counter medicines, 65.1% are prescription medicines and 1.1% drugs to be used in medical conditions.

Of the 58 countries 4696 registered drugs, in Drug Registry of Mongolia. In 2019, domestically produced drugs accounted for 25.8% of all registered drugs.

Figure 9. 4 The registered drugs, by country, 2019

Figure 9. 5 The percentage of domestically produced drugs, 2012-2019

By the end of 2019, all registered drugs are shown according to the Anatomical Therapeutic Chemical (ATC) classification in Mongolia as follows:

Figure 9. 6 The Anatomical Therapeutic Chemical (ATC) classification

The domestically produced drugs, by registered years, as follows:

Figure 9. 7 The domestically produced drugs, by registered years, 2014-2019

Figure 9. 8 The domestically produced drugs of traditional, by registered years, 2014-2019

In 2019, a total of 1021 registered traditional drugs, 6 of them was new registered.

Figure 9. 9 The biologically active products, 2013-2019

In 2019, 223 new Biologically Active Products have been registered.

## 9.2. Drug side effects and safety

Registration of drug side effects and safety are regulated by the Order No.415, “Registration Rule of Drug Side Effects and Safety”, approved by Minister of Health in 2013.

During 2012-2019, 904 cases of drug side effects were registered from 134 health care organizations and those cases were conversed by the Subcommittee of Drug Research.

*Table 9. 1 The number of Drug Side Effects and Safety, 2013-2019*

Indicator		2013	2014	2015	2016	2017	2018	2019
Ulaanbaatar	Number of health organization	14	11	5	16	9	15	21
	Drug side effects	111	98	44	117	59	95	74
Aimag	Number of health organization	7	7	8	6	7	2	6
	Drug side effects	66	60	24	106	27	7	16
Total	Number of health organization	21	18	13	22	16	17	27
	Drug side effects	177	158	68	223	86	102	90

The Subcommittee of Drug Research evaluates and certifies those drug side effects reported from health care organizations according to the “Naranjo scale/Наранжогийн горим”.

## 9.3 Medical equipment and automation

To ensure the implementation of the Order of the Deputy Prime Minister of Mongolia No. 117 of 2015 “On re-approval of the amount of payment for metrological works and services” and the Order of the Minister of Health and Sports No. 249 of 2015 “Procedure for calibration of medical equipment” calibrate of 14 types of medical equipment used by the organization with simulators and analyzers that meet international standards, and ensuring the regular and reliable operation of medical equipment.

In 2019, 2,913 medical equipment was calibrated, used in 243 public and private health organizations, 79.5% to approximate.

Figure 9. 10 The number of Health organization, calibrated of equipment, 2019

Figure 9. 11 Calibration of medical equipment, by health organization, 2019

## CHAPTER 10. HEALTH ECONOMICS

This chapter is based on the financial performance report of the General Budget Governor in charge of health issues and information on Health Insurance Fund's income and expenditure.

### 10.1. Budget performance of the Health Sector

Figure 10. 1 Expenditure of the Health sector as a share of GDP

The National Statistics Office has amended the estimation of the gross domestic product (GDP) 3 times in 2006, 2010 and 2014 and revised the method of estimating GDP and Gross National Income in 2007 and 2013 and amended 5 times.

The GDP has increased according to the estimation of the revised methodology and the amended calculation of Gross National Income and Gross Domestic Product.

The share of healthcare expenditure to the revised estimation of GDP has declined as compared to the previous estimation. The healthcare expenditure was 2.5%, in 2017, which decreased to 2.2%, in 2018 and 2019 amount and equivalent.

Compared to 2018, the expenditures of Health increased by 14.0 per cent, in 2019.

Figure 10. 2 Health sector expenditure, by economic classification (billion MNT)

Figure 10. 3 Health sector expenditure, by economic classification (Percentage)

“Standard cost per citizen” or expenditures of family health centers have been allocated to the expenditure of the Government internal transfer until 2012.

Since 2013, expenditure on soum health centers has been allocated to this expenditure, so, it has increased significantly.

Since 2013, these expenditures have been covered per the “Budget Law”, “Regulation on Local Budget Drafting” approved by the Minister of Finance Order No. 244 of 2012, and “Regulation on Budget Financing and Expenditure Rights” approved by the second appendix of the Minister of Finance Order No. 73 of 2013.

In 2016, the Sports sector was separated from the Health sector and transferred to the Ministry of Education, Culture, Science and Sports. And the expenditure of the Government internal transfer has decreased by 1.2 times in 2016 as compared to 2015. However, the expenditure has increased by MNT 16.1 billion in 2019 as compared to 2018.

As of 2019, looking by economic classifications as follows: accounting for salaries and incentives are 38.5 per cent, 14.7 per cent to medicines and medical equipment, 1.6 per cent to hospital food and nutrition, 3.6 per cent to operating costs, 12 per cent to capital expenditures, and 15.7 per cent to primary health care. Expenditures of health care providers or government transfers accounted for 13.9 per cent of other expenditures.

Looking at the sector’s total expenditure by financial classification, salaries and incentives are accounted for the highest proportion of health expenditure.

*Figure 10. 4 The expenditures of the Health sector, by leading activities (per cent)*

Source: MOH

The last 2 years data shows that healthcare expenditure was equivalent to 87% in 2018, it has increased to 88.2% in 2019 and the capital expenditure has decreased from 13% to 11.8%. Expenditures on sports were deducted from the Health sectors expenditures in 2016 and transferred to the Ministry of Education, Culture and Science.

Figure 10. 5 The health expenditure, by sub activities /percentage/

Health expenditure by sub-category indicates that expenditure on health care services accounted for 89.5% of total funding in 2017-2018, which increased by 1.5 per cent, to 91, in 2019.

The expenditure on health management has decreased by 1.0% from 9% to 8% and the expenditure on health programs and projects has increased by 3.8% from 1.2% to 5.0%, respectively. Government special funds, or health promotion funds, decreased by 0.38 per cent from 0.8 per cent to 0.42 per cent, and there were no expenditures on centralized health measures. Expenditures on projects and programs have been transferred to the Minister of Finance from 2019.

Figure 10. 6 The health expenditure, by health care level /billion MNT/

Figure 10. 7 The health expenditure, by health care level /percentage/

In regard to health expenditure by level of care, a share of the expenditure has increased by 2.8 percent in primary health care level, by 1.3 percent in secondary level and by 1.5 percent in tertiary level with an annual average over the last 3 years.

The share of expenditure on tertiary health care was 41.2% or 270.0 billion MNT, in 2019.

Figure 10. 8 The capital expenditure, type by investment (billion MNT)

Figure 10. 9 The capital expenditure, type by investment (percentage)

Capital expenditures are grouped that funds paid out for buildings, renovation, vehicles, equipment and others. The share of capital expenditures on these groups has fluctuated

significantly. Expenditures on vehicles and equipment decreased steadily, from 43.1 per cent to 9.8 per cent, and decreased by 3.8-17.4 per cent per year.

In 2019, the percentage of capital expenditure accounted for 84.6% /81.4 billion MNT/, for building, 5.6% /5.4 billion MNT/ for renovation, 8.8% /9.5 billion MNT/ for automobiles and equipment, respectively.

Compared to 2018, expenditure for building increased by 20.6 percent or 21.4 billion, for renovation decreased by 3.2 percent or 2.9 billion MNT, and automobiles and equipment decreased by 17.4 percent or 16.04 billion MNT.

Figure 10. 10 Financing sources of health and sports expenditure, /percentage/

Funding sources of the health sector are the State budget, Health Insurance Fund, basic income and subsidies, and external funding.

Since 2014, external funding sources have been registered and expended for medical care, public health programs and investment activities.

In 2019, the state budget increased by 9.6 per cent, health insurance fund decreased by 0.3 per cent, and the basic income and subsidies increased steadily from 2015 and decreased by 0.1 per cent, compared to 2018.

## 10.2. Income and Expenditure of Health Insurance Fund

Figure 10. 11 Revenue and expenditure of the health insurance fund (billion MNT)

Revenues of the health insurance fund are raised year by year. As of 2019, the share of health insurance fund expenditures in the health insurance fund's revenue is 76.3 per cent. According to recent data from the HIF, the lowest expenditure in 2007 was 54.8 per cent of total income, and the highest was 89.1 per cent in 2010.

Figure 10. 12 Expenditure of the health insurance fund, by sources (billion MNT)

Figure 10. 13 Expenditure of the health insurance fund, by sources (percentage)

In 2019, the health insurance fund's revenue was 469.6 billion MNT or 428.75 billion MNT from premium income and 40.87 billion MNT from other sources.

Revenues from the insured's health insurance premiums account for the largest per cent of the health insurance fund's total income or 37.4 per cent. The second income source is

health insurance premiums paid by employers, accounting for 35.7 per cent of total revenue.

Figure 10. 14 The expenses of the health insurance fund /percentage/

According to the health insurance fund's expenditures for the last eight years, 95.5-99.5 per cent of the expenditures are for the insured. 0.3-3 per cent of the total expenditures were spent on the health insurance organization's operating expenses. In 2019, there was 0.1 per cent of other expenses.

Figure 10. 15 The expenses of the health insurance fund, by type

The expenditures of Health insurance fund in 2019 by service summarized as follows: 38.3% for hospital/inpatient treatment service, 12.4% for ambulatory treatment service, 11.3% for necessary drug discount, 11.9% for diagnosing and testing, and 26.1% for other aids and service.

## CHAPTER 14.

### HEALTH INDICATORS

## MAIN HEALTH INDICATORS, 2019

№	Province and city	Population, 2019	Per 10 000 population							Number of persons per hospital bed	Number of persons per physician	Number of midlevel personnel per physician	Number of nursing personnel per physician	Average outpatient visits per person per year	Per 1 000 population			Infant mortality rate per 1 000 live births	Under 5 mortality rate	
			Hospital beds	Physicians	Nurses	Midwife	Nurse	Medical professional and technical education, all other employees	All health care workers						Crude birth rate	Crude death rate	Population growth rate		Under 5 children per 1 000	Live births per 1 000
A	B	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19
1	Arkhangai	94994	54.6	21.6	31.5	4.1	8.9	13.9	135.2	183.2	463.7	0.6	1.5	3.3	18.0	5.7	12.3	15.2	3.4	21.7
2	Bayan-Ulgii	108530	76.1	22.9	34.8	3.6	14.2	11.8	139.3	131.4	436.2	0.5	1.5	3.8	28.8	5.4	23.4	20.7	5.3	25.1

## Crude Birth and Death Rates and Population Growth /2010-2019/

## DEATHS BY CAUSES AND SEX, 2019

Main Causes ICD-10	Total		Males		Females	
	Abs. number	per 10 000 pop	Abs. number	per 10 000 pop	Abs. number	per 10 000 pop
Diseases of the circulatory system	5531	17.34	3280	20.85	2251	13.92
Neoplasms	4582	14.36	2545	16.18	2037	12.60
Injury, poisoning and certain other consequences of external causes	2827	8.86	2270	14.43	557	3.45
Diseases of the digestive system	1173	3.68	654	4.16	519	3.21
Diseases of the respiratory system	803	2.52	530	3.37	273	1.69
Certain conditions originating in the perinatal period	552	1.73	324	2.06	228	1.41
Certain infectious and parasitic diseases	342	1.07	220	1.40	120	0.74
Diseases of the nervous system	342	1.07	185	1.18	157	0.97
Diseases of the genito-urinary system	281	0.88	142	0.90	139	0.86
Congenital malformations, deformations and chromosomal abnormalities	228	0.71	113	0.72	115	0.71
Others	544	1.71	251	1.60	295	1.82
<b>Total</b>	<b>17205</b>	<b>53.93</b>	<b>10514</b>	<b>66.83</b>	<b>6691</b>	<b>41.38</b>

## FIVE LEADING CAUSES OF DEATH (BY PROVINCE), 2019

№	Province, city	per 10 000 population				
		Diseases of the circulatory system	Neoplasms	Injury, poisoning and certain other consequences of external causes	Diseases of the digestive system	Diseases of the respiratory system
A	B	1	2	3	4	5
1	Arkhangai	23.14	13.78	9.47	3.16	2.00
2	Bayan-Ulgii	22.44	12.71	4.14	2.79	3.18
3	Bayankhongor	19.18	11.46	8.06	5.67	2.38
4	Bulgan	20.16	18.36	5.90	2.13	2.30
5	Govi-Altai	20.22	16.25	6.22	2.42	1.56
6	Govisumber	8.05	11.49	4.60	3.45	0.57
7	Darkhan-Uul	19.98	17.65	6.01	1.94	0.39
8	Dornogovi	12.05	12.91	13.92	4.30	4.74
9	Dornod	17.43	18.16	6.09	4.63	1.83
10	Dundgovi	20.80	17.80	7.94	1.93	2.14
11	Zavkhan	20.40	13.92	6.20	2.76	1.93
12	Orkhon	15.80	14.06	9.15	4.05	1.44
13	Uvurkhangai	20.14	11.84	5.62	3.89	2.94

## OUTPATIENT MORBIDITY (PER 10 000 POPULATION), 2019 /CONTINUE/

№	Province and city	Diseases of the respiratory system					Out of them					Diseases of the digestive system			Out of them			Diseases of the skin and subcutaneous tissue	Diseases of the musculoskeletal system and connective tissue	Diseases of the genito-urinary system	Out of them		Pregnancy, childbirth and the puerperium	Certain conditions originating in the perinatal period	Congenital malformations, deformations and chromosomal abnormalities	Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified	Injury, poisoning and certain other consequences of external causes																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																	
		Influenza	Pneumonia	Acute upper respiratory infections	Asthma	Chronic obstructive pulmonary disease	Diseases of the digestive system			Gastric ulcer	Chronic inflammation of the liver	Alcoholic liver disease	Diseases of the skin and subcutaneous tissue			Diseases of the musculoskeletal system and connective tissue	Diseases of the genito-urinary system	Acute and chronic renal failure	Acute and chronic pyelonephritis	Pregnancy, childbirth and the puerperium	Certain conditions originating in the perinatal period	Congenital malformations, deformations and chromosomal abnormalities	Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified	Injury, poisoning and certain other consequences of external causes																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																				

## Outpatient Morbidity per 10 000 population, 2019

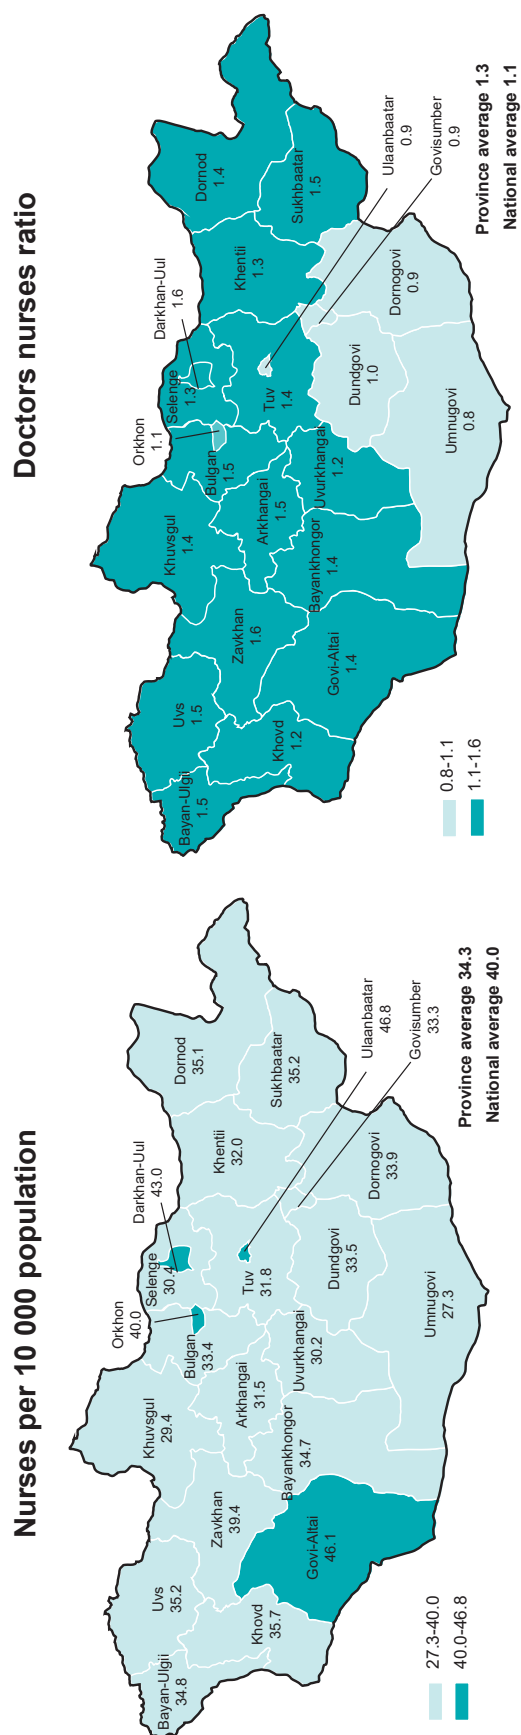

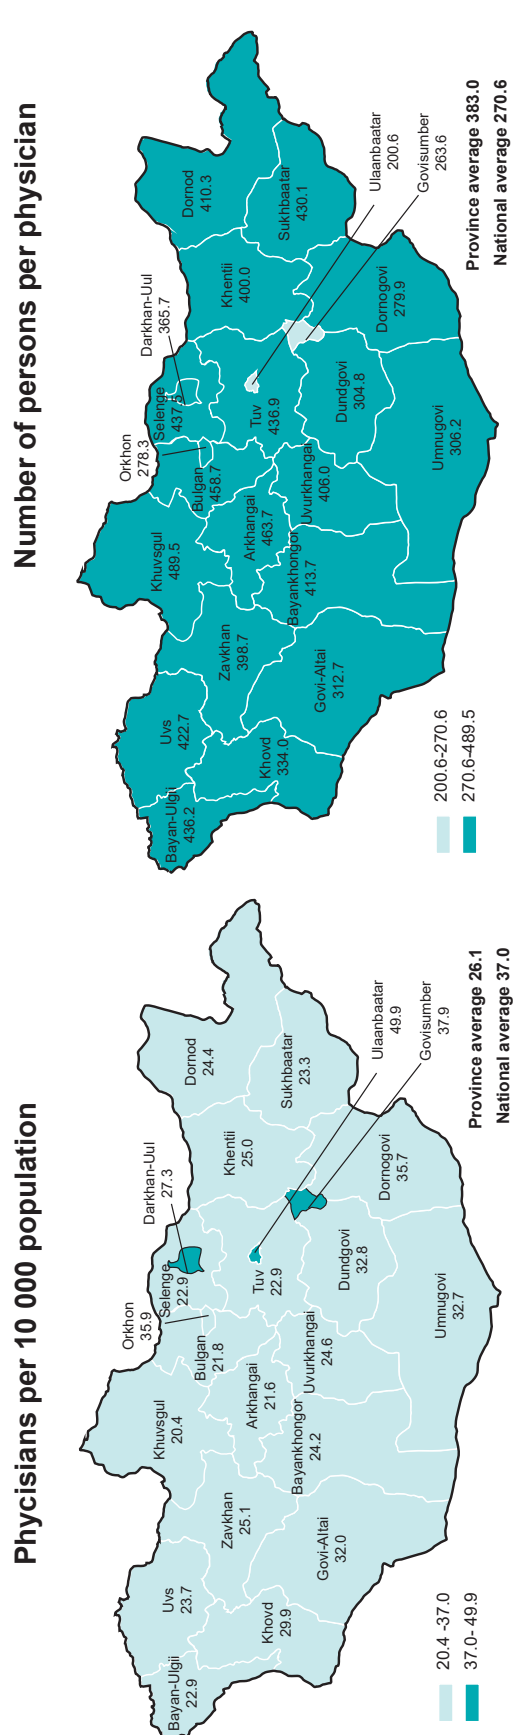

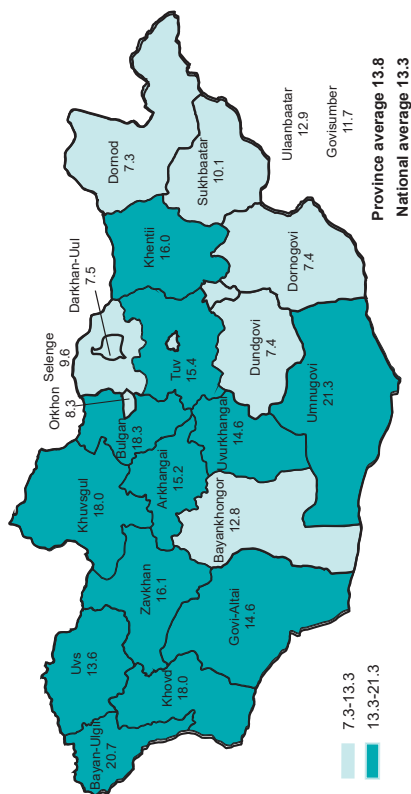

### Inpatient Morbidity per 10 000 population, 2019

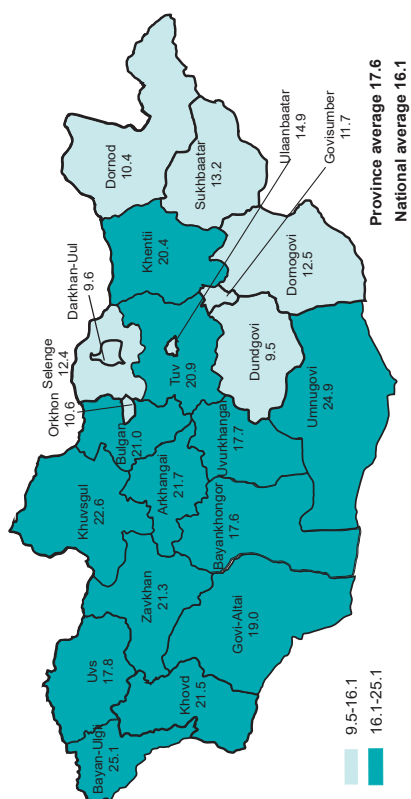

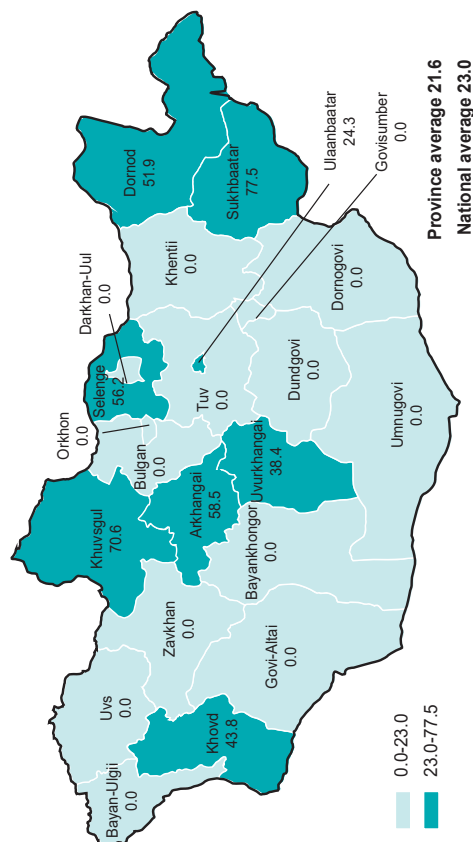

Infant mortality rate per 1 000 live births

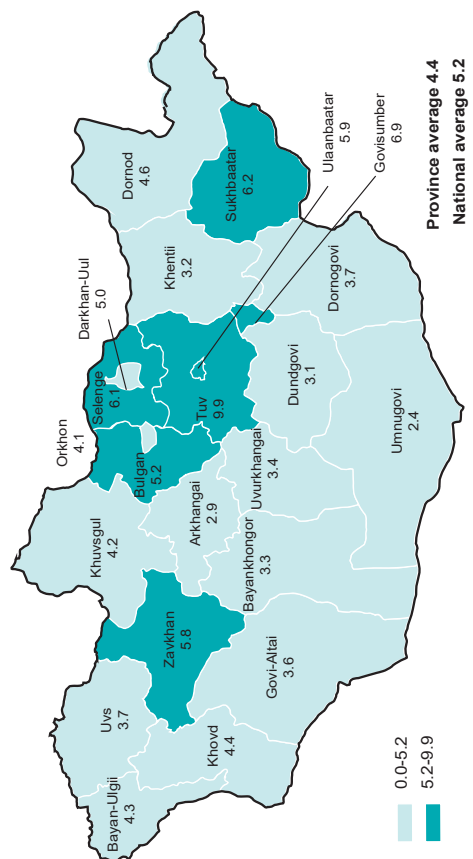

Under five mortality rate per 1 000 live births

Maternal mortality per 100 000 live births

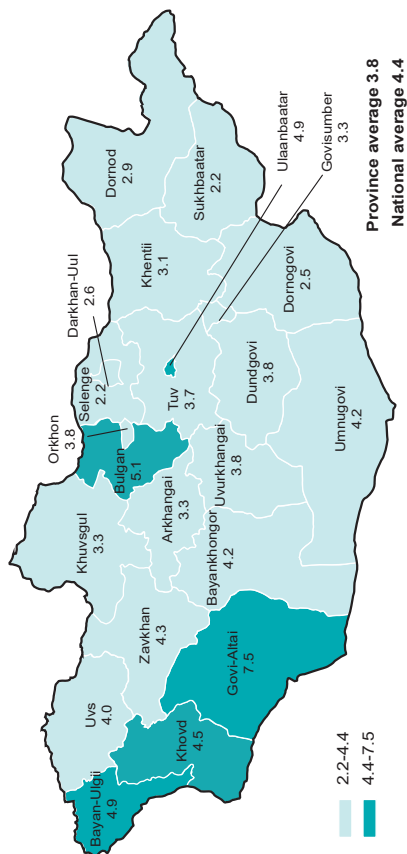

Still births rate /per 1 000 births/

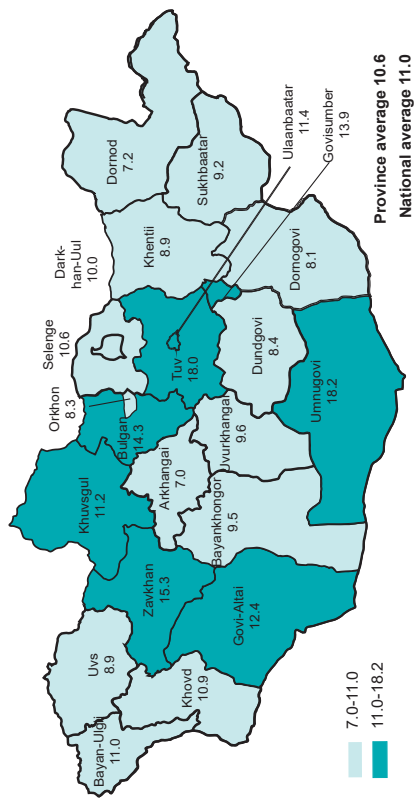

# QUALITY AND ACCESSIBILITY INDICATORS OF MEDICAL CARE AND SERVICES

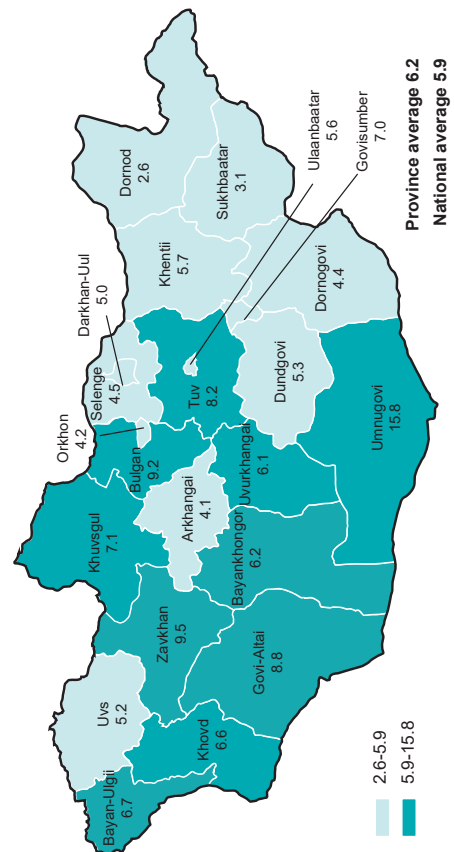

**Percent of newborn infants weighing  
at least 2500 gr at birth**

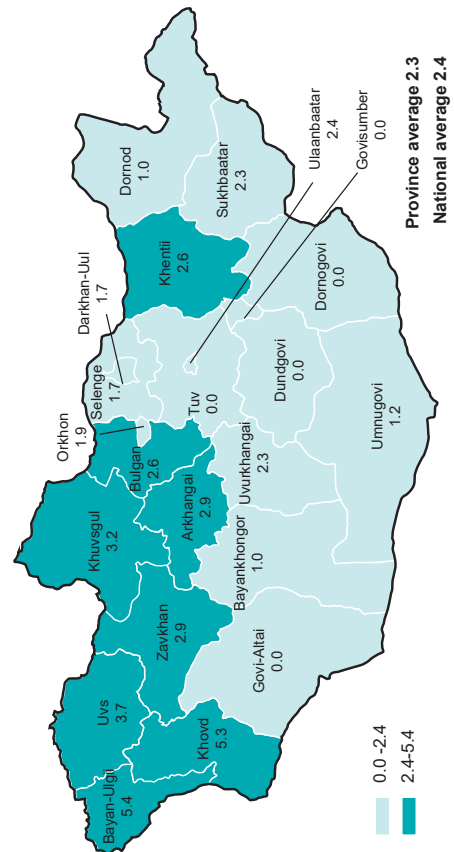

**Perinatal mortality rate  
/per 1 000 births/**

**Early neonatal mortality rate  
/per 1 000 live births/**

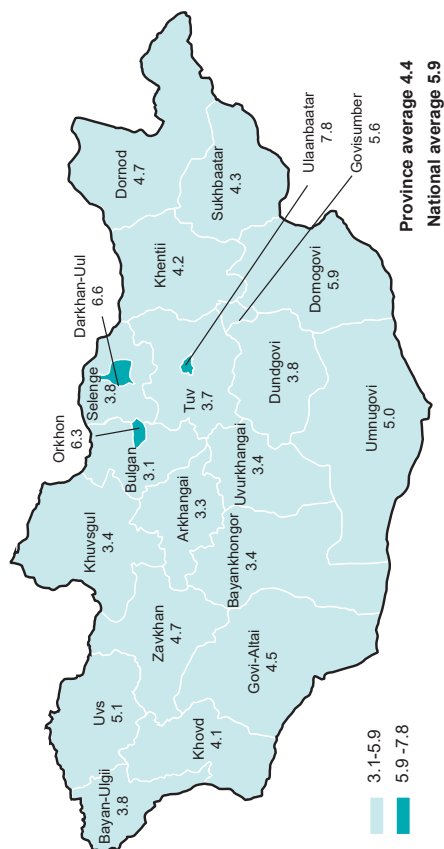

**Post neonatal mortality rate  
/per 1 000 live births/**

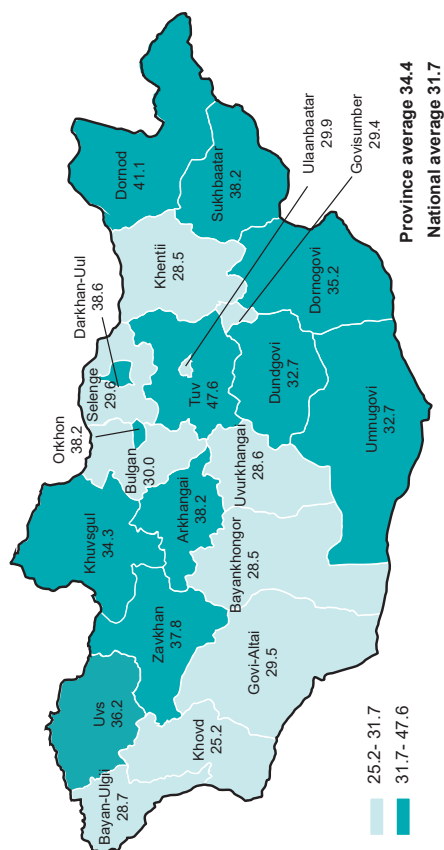

## QUALITY AND ACCESSIBILITY INDICATORS OF MEDICAL CARE AND SERVICES

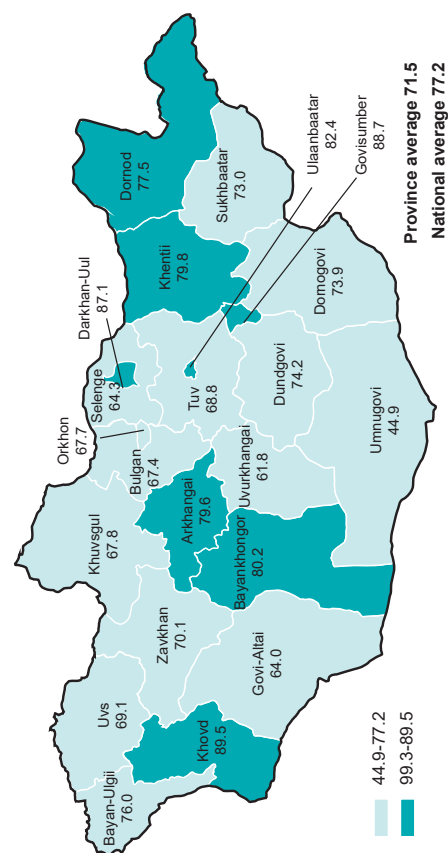

Average outpatient visits per person per year

Percentage of preventive medical check-up

Percentage of bed fund

## LEADING CAUSES OF THE MORBIDITY, PER 10 000 POPULATION

## Diseases of the respiratory system

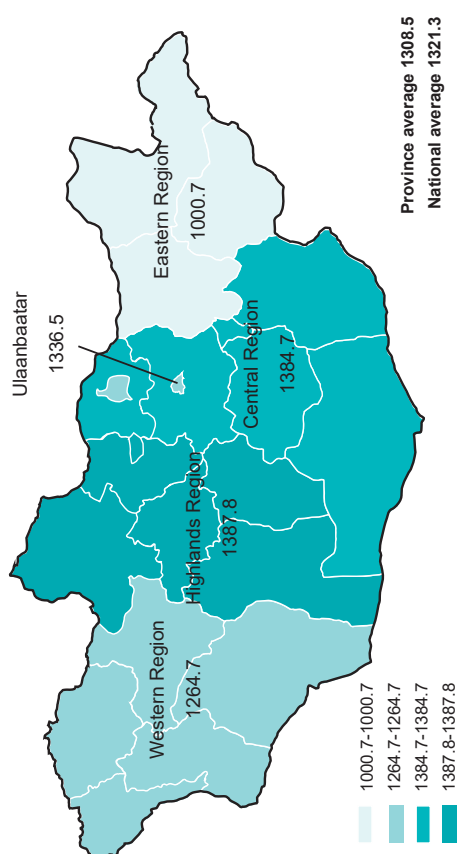

## Diseases of the digestive system

## Diseases of the genito-urinary system

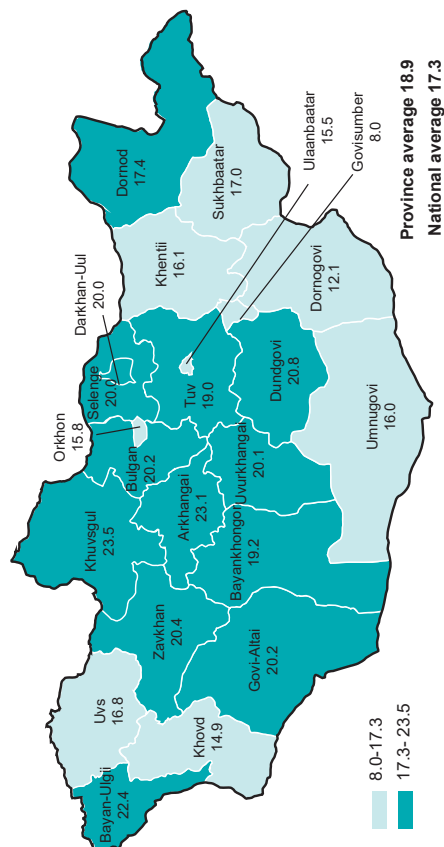

## Diseases of the circulatory system

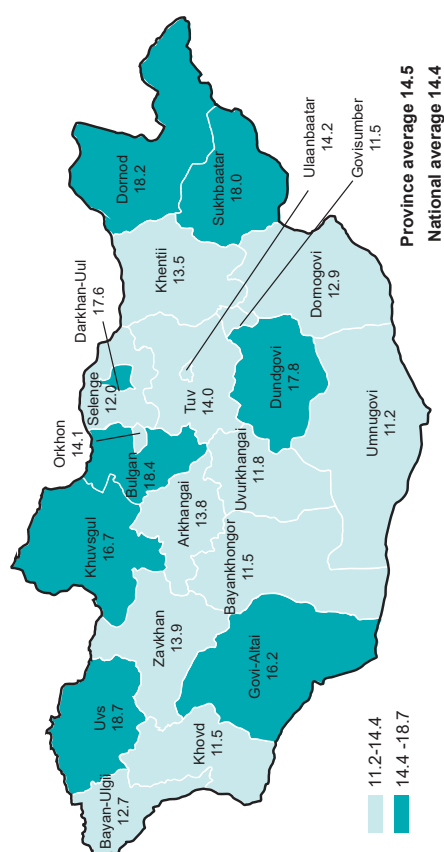

# LEADING CAUSES OF THE MORTALITY, PER 10 000 POPULATION

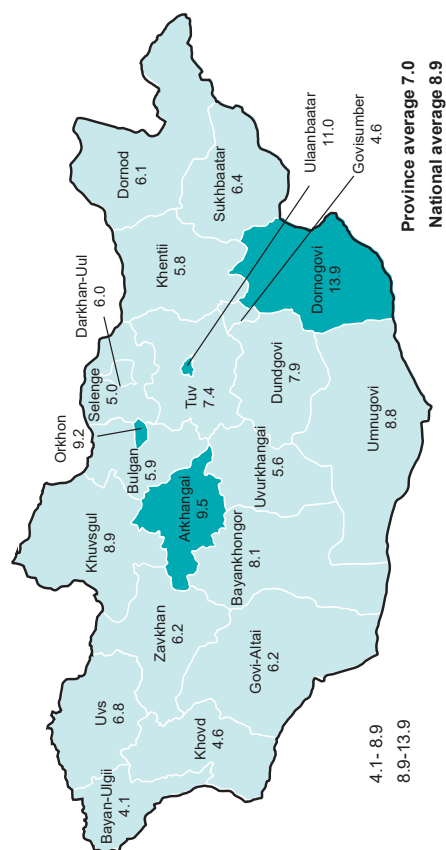

## Deaths of the circulatory system

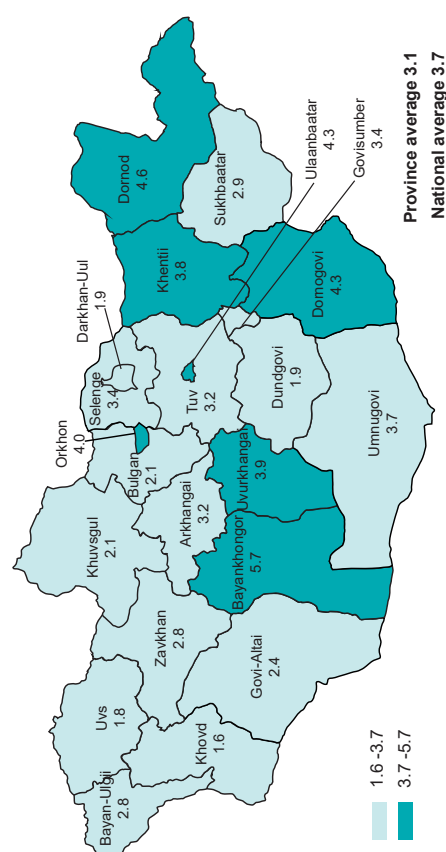

## Deaths of the Neoplasm

## Deaths injury-poisoning and certain other consequences of external causes

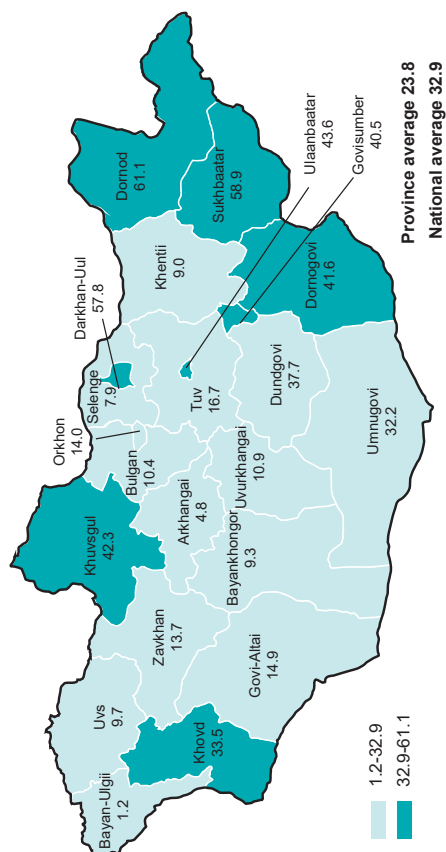

## Deaths of the digestive system

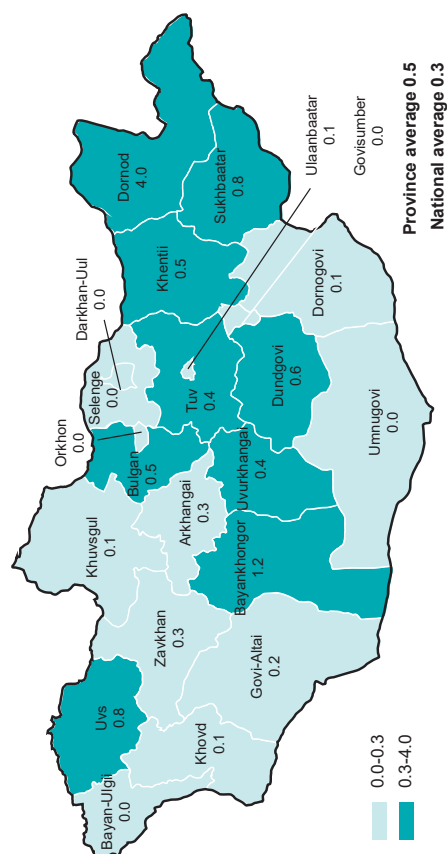

## **Incidence of Varicella**

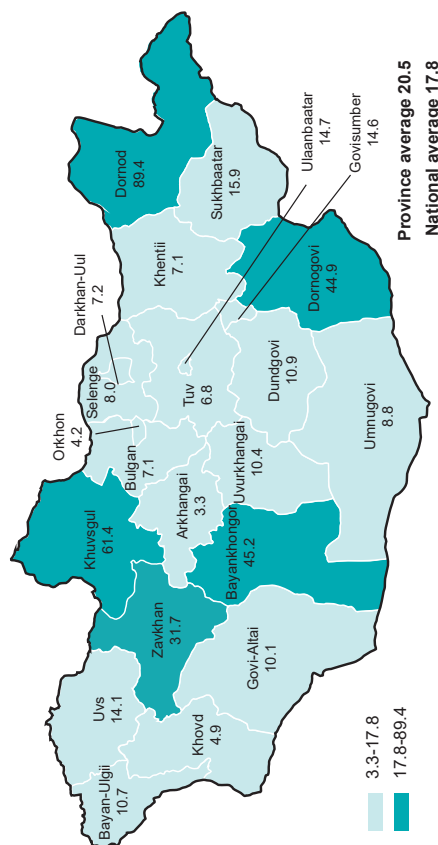

## Incidence of Brucellosis

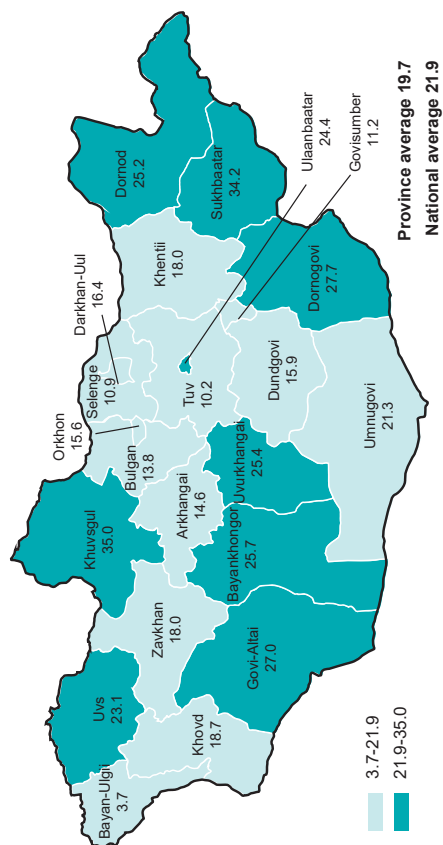

## SEXUAL TRANSMITTED INFECTIOUS DISEASES, PER 10 000 POPULATION

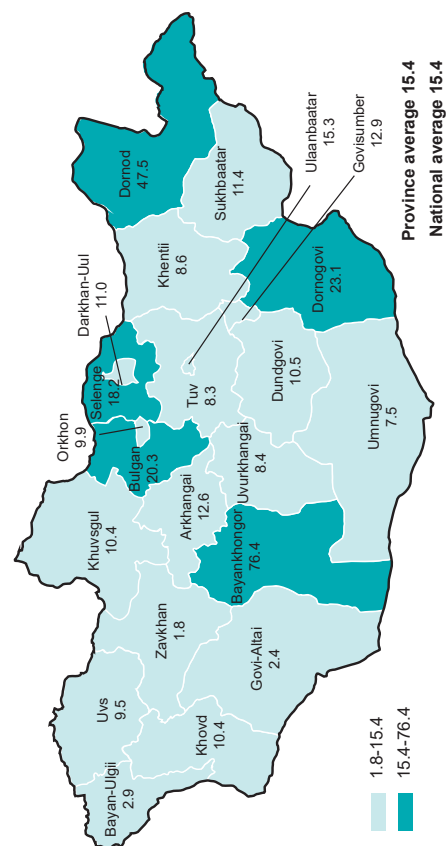

Incidence of Gonococcal infection

Incidence of Syphilis

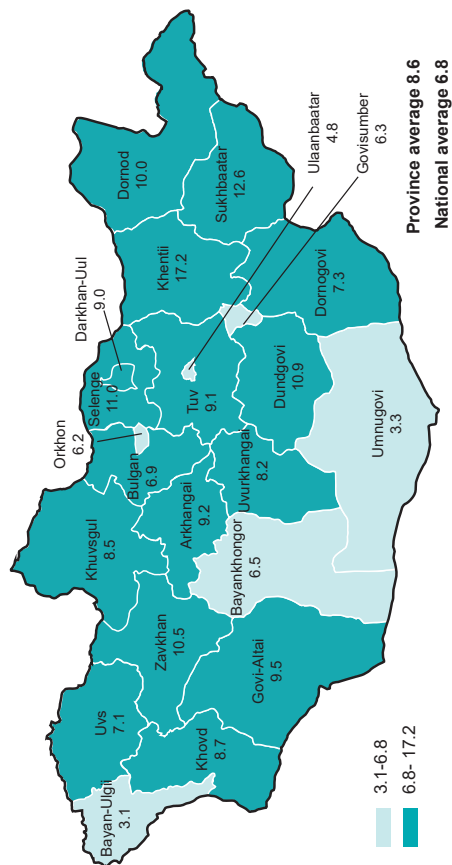

Incidence of Trichomoniasis

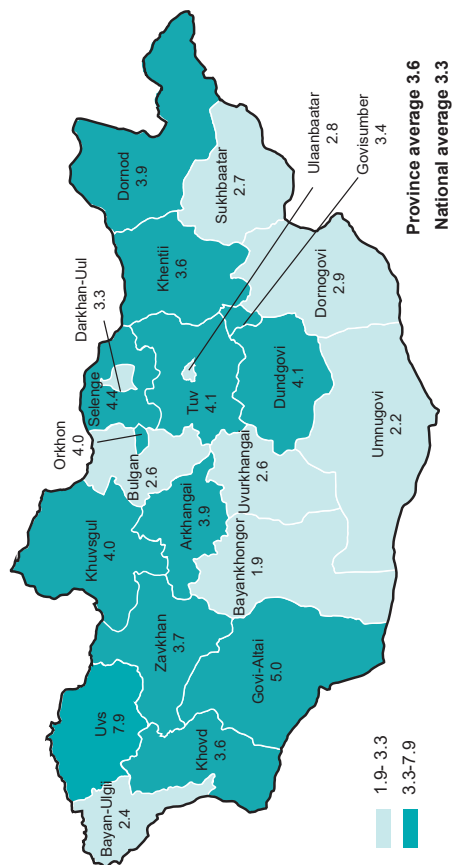

## INCIDENCE OF MALIGNANT NEOPLASMS, PER 10 000 POPULATION

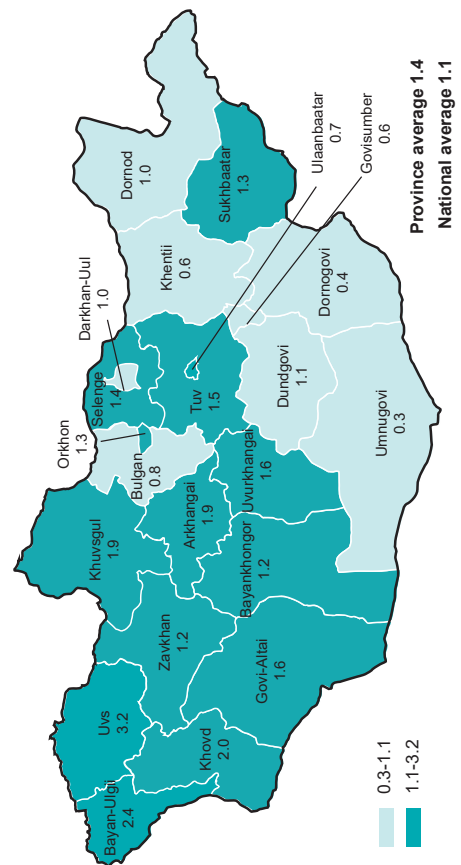

Incidence of Liver cancer

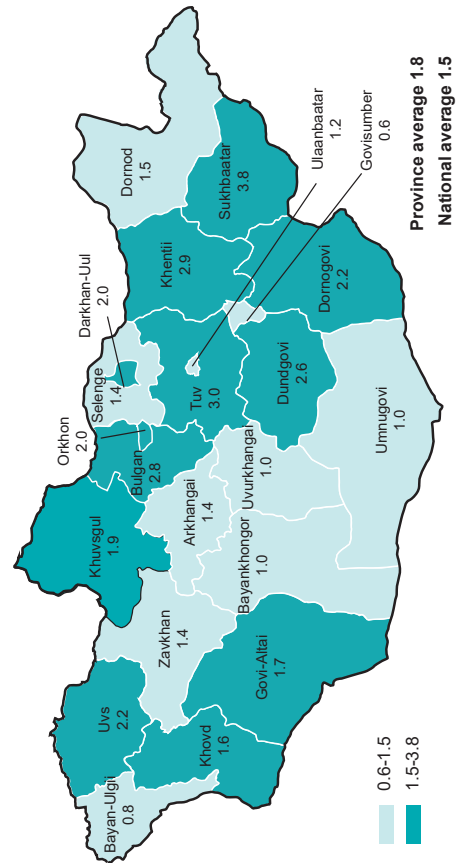

Incidence of Stomach cancer

Incidence of Oesophagus cancer

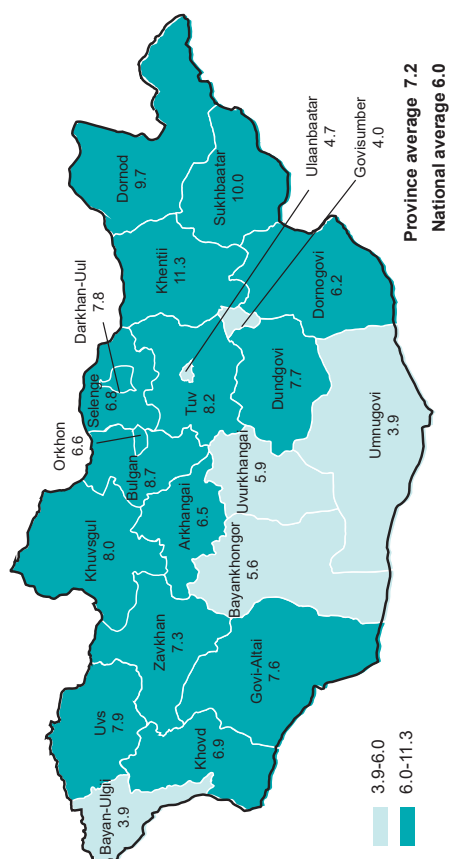

Incidence of Lung cancer

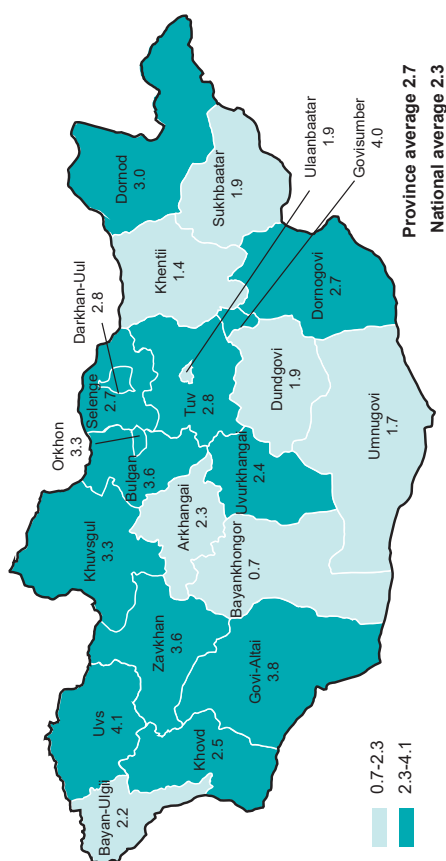

# DEATHS OF MALIGNANT NEOPLASMS, PER 10 000 POPULATION

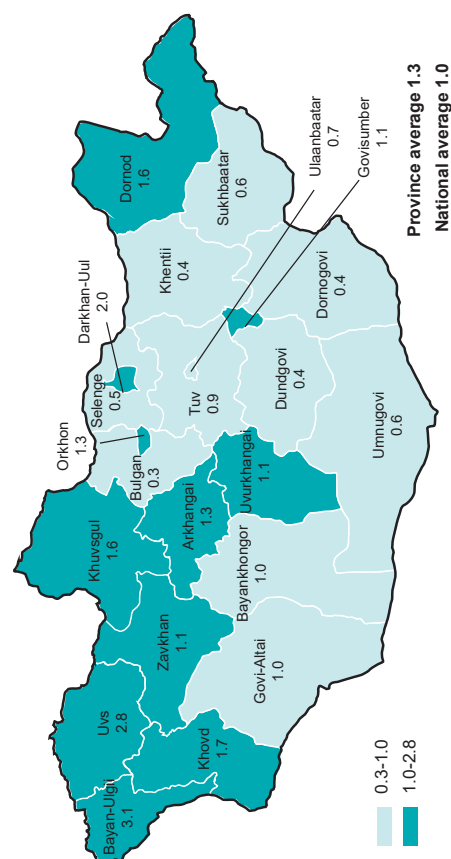

## Deaths of Liver cancer

## Deaths of Stomach cancer

## Deaths of Oesophagus cancer

## Deaths of Lung cancer
